# Introduction

#### Purpose of the Volume

As delineated in Section 5-5-227(2)(a), MCA, the Revenue and Transportation Interim Committee (RTIC) is required to prepare "an estimate of the amount of revenue projected to be available for legislative appropriation." In addition, sections 5-12-302(2) and 5-12-302(6) specifically require the Legislative Fiscal Analyst (LFA) to "estimate revenue from existing and proposed taxes" and also requires the LFA to "assist the revenue and transportation interim committee in performing its revenue estimating duties...".

The purpose of this volume is to document the RTIC recommendations regarding anticipated revenues for fiscal 2009 through 2011. It should be noted that the accompanying RTIC estimates are based on current federal and state laws and do not include estimates for revenues due to litigation or any other pending legal issues. This position is consistent with past recommendations of the RTIC.

# Montana Economic Outlook

Montana state government, like any other business, is influenced by economic and demographic developments. For example, Montana's economic base as well as the strength of the U.S. economy determines the level of revenues collected from personal and corporate income taxes, property taxes, natural resource taxes, and investment earnings. Similarly, both economic and demographic variables affect state government disbursements for education, human services, corrections, and other governmental services.

Montana's total revenue base is comprised of a number of taxes and fees plus numerous federal reimbursements or grants. Revenues are further enhanced from the investment of trust monies and idle cash pending disbursement from the state treasury. Since individual income tax is the state's largest general fund tax source, economic developments or trends in the areas of employment and income levels significantly influence available revenues to fund governmental services. Federal revenue correspondingly is used to fund a number of human service, transportation, and educational services. In a number of instances, general or state special revenue fund dollars are required to provide a state match before the federal funds can be disbursed.

Conversely, Montana's total expenditure base is targeted toward educational and human service programs with a significant allocation to highway construction. Education and human service costs are driven by some of the same economic and demographic conditions that influence state revenues. If employment levels increase, this usually translates to an increase in population or a reduction in unemployment levels. With population increases comes a corresponding increase in educational and human service costs. A greater population requires a better transportation system not only for the general populace, but also for the businesses that expect to expand to meet the needs of an ever-growing population.

Over the past 15 years, Montana has experienced a myriad of economic conditions. The 1990's were generally good years for Montana's economy. With a few exceptions, Montana experienced above average employment and wage levels that translated into strong tax revenue growth. This revenue growth was further enhanced by the significant increase in the equity markets and the resulting growth in capital gains income. In 2001 and 2002, the nation was faced with a recession. Montana's revenue stream was harmed by the same factors that had earlier created extraordinary growth. Beginning in fiscal 2004, general fund revenues began a period of unprecedented growth increasing by 9.4 percent annually from fiscal 2003 to fiscal 2008.

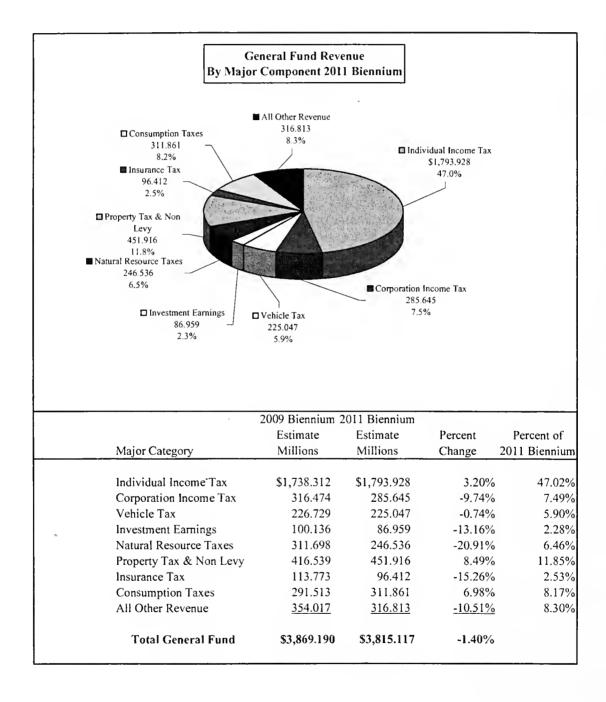

The three income sources primarily responsible for Montana's revenue reversal were individual income tax, corporation income tax, and oil and natural gas production taxes. Individual income tax has experienced increased growth resulting in large part from federal tax reform; increases in wage growth (especially in real wage growth per worker); higher rent, royalty, and partnership income; and a higher capital gains base in 2004, 2005, 2006, and 2007. These increases in individual income tax revenues occurred even with the implementation of SB407, the state individual income tax reform legislation enacted by the 2003 Legislature. SB 407 reduced tax rates on income and instituted a new capital gains credit of 1 percent beginning January 1, 2005. The capital gains credit increased to 2 percent on January 1, 2007. The corporation income tax revenues have rebounded as Montana corporations have recovered from the recession of 2001 and the effects of "9/11". Additionally, the natural resource boom in Montana has dramatically increased corporate profitability for energy companies and its residual industries. Finally, both oil and natural gas prices have increased significantly in response to the war in Iraq and the uncertainty about future supplies. Because oil and natural gas production tax rates are based on the value of the commodity, higher prices have caused a surge in revenues from this source. Additionally, higher prices have stimulated new drilling activity for both commodities.

The legislature faces a significantly different financial picture than just two years ago. Total general fund revenues have increased substantially during the fiscal periods 2004 through 2008. Greater revenues combined with disbursement budgets as adopted by the 60th Legislature have produced a fund balance larger than anticipated for fiscal 2008. The ending fund balance for fiscal 2009, however, is expected to decline from the fiscal 2008 level as estimated revenues are expected to decline due to the U.S. and world economic conditions. Even with declining revenues, the 61st Legislature should have sufficient funds available to fund a present law budget. The 61st Legislature should carefully craft the 2011 biennium budget and be cognizant of the potential downside risks associated with the current economic climate. At this time, it is unclear how wage growth, capital gains income, corporate profitability, and energy prices may change in the future. The 61st Legislature should not build a general fund budget that is greater than a sustainable revenue base for the 2011 biennium as well as the 2013 biennium.

#### **General Fund Revenue Implications**

Montana's fiscal outlook for revenue growth is less optimistic than the last biennium. The key economic assumptions targeted as most affecting state government receipts are Montana total income, employment, population levels, inflation rates, corporate profits, property values, interest rates, and energy prices.

As shown in the following figure, individual income tax, corporation income tax, property tax, vehicle tax, and natural resource taxes are expected to contribute almost 79 percent to the total general fund revenue stream during the 2011 biennium. Total general fund revenues for the 2011 biennium are projected to decrease 1.40 percent over the 2009 biennium projections. The comparative change by major revenue category is shown at the bottom of the figure.

The following two tables are the legislature's revenue estimates, by source, for each of the three years under consideration. The first table contains general fund revenue sources and the second table contains selected non-general fund revenue sources.

# Significant Economic Assumptions

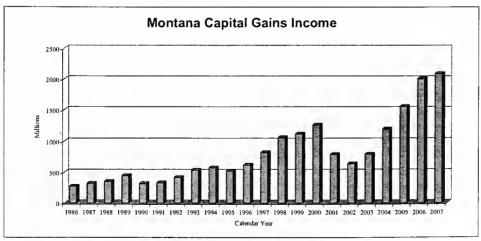

This section of the report highlights the significant economic assumptions used by the RTIC to develop the revenue estimate recommendations contained in this document. Each assumption is discussed and is graphically portrayed to give the reader a perspective of the historical trend versus the forecast amount.

#### Montana Total Income

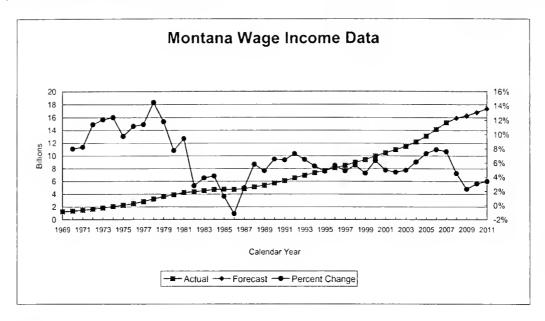

The total of all income sources listed on the Montana personal income tax form is referred to as Montana total income. The Department of Revenue tracks income from 11 different components, including wages, interest, dividends, business, capital gains, supplemental, rental, farm, social security, IRA and pension, and other incomes. Montana total income is the single most important variable to consider in the revenue estimation process. Of the 11 income items, wage and salary income provides the largest portion of Montana total income. Since 1990, wage and salary income has contributed an annual average of 64.1 percent of total income. In calendar 2007, it contributed 59.4 percent, or \$12.7 billion. The average compounded growth from calendar 1990 to 2007 has been 5.6 percent

In recent times, capital gains income has been the focus of much conversation and speculation. Capital gains income has increased in relative importance over the decade. In 1990, capital gains made up only 4.2 percent of total income, with reported income of \$318 million. In 2001, capital gains receded to 5.7 percent of total income, with income at \$786 million, a reduction of over 37.6 percent over the previous year. In 2007, capital gains income was \$2,089 million and increased to nearly 9.9 percent of total income.

In 2002 capital gains income fell by \$622.3 million from the 2000 level, but rebounded in calendar 2003 through 2007. Capital gains are projected to decline between 2008 and 2011.

#### Montana Wages

The average annual growth in Montana Wages and Salaries has been 5.9 percent between 1991 and 2007. Wage growth exceeding this average occurred in the early nineties and again in the last four years, 2004-2007. In both these periods inflation was relatively high, i.e. greater than 2.5 percent, and employment growth was relatively high.

The forecast for inflation for calendar years 2008 through 2011 is as provided by Global Insight in the November issue of forecasts. Inflation for 2008 is forecast to be at 4.0 percent and then turn negative in 2009, to negative 0.9 percent as the national and world economies slow down and perhaps enter a recession. Inflation is expected to increase to 2.4 percent in 2010 and 3.0 percent in 2011.

The growth in wages for calendar 2008 though 2011 is provided by Global Insight in their October Montana-specific report. In calendar 2005 through 2007, wages on average grew at a historically high rate of around 7.5 percent. For 2008 growth of only 4.5 percent is expected, dropping to 2.3 percent in 2009, and rising somewhat to 3.1 percent in 2010 and 3.4 percent in 2011.

Employment is also expected to slow down in 2008 through 2011. Employment growth since 2003 has been between 2.2 percent and 3 percent. Forecasts from Global Insight for Montana employment have Montana's employment growth at 1.2 percent for 2008, negative 0.6 percent for 2009, 0.9 percent for 2010 and 1.3 percent for 2011. Negative growth in employment is expected in almost all sectors in 2009 except in education and health services. All sectors are expected to rebound somewhat in 2010 and 2011 as the national economy comes out of the 2008 and 2009 slowdown.

Growth in real wages per worker, defined as wages per worker adjusted for inflation, was low in the early nineties but has been above the 1991-2007 average of 0.6 percent growth since 1997. Because of the assumptions on

	W	age and Sala	ry Income	Growth	
	Calendar Year	Employment Growth	Inflation	Real Wage Per Worker	Wage Growth
Α	1991	2.1%	4.8%	-0.6%	6.4%
Α	1992	4.3%	3.6%	-0.7%	7.3%

Α	1995	3.1%	2.7%	-1.0%	4.8%
Α	1996	2.8%	2.9%	-0.1%	5.6%
Α	1997	1.3%	2.6%	0.9%	4.8%
Α	1998	2.2%	1.9%	1.5%	5.7%
Α	1999	2.0%	1.9%	0.6%	4.5%
Α	2000	1.9%	2.8%	1.4%	6.3%
Α	2001	1.2%	3.1%	0.7%	5.0%
Α	2002	1.1%	2.2%	1.3%	4.7%
Α	2003	1.2%	2.0%	1.7%	5.0%
Α	2004	2.7%	2.5%	0.9%	6.1%
Α	2005	2.2%	3.0%	1.9%	7.3%
Α	2006	3.4%	3.3%	1.0%	7.9%
Α	2007	2.2%	2.7%	2.5%	7.6%
F	2008	1.2%	4.0%	-0.6%	4.5%
F	2009	-0.6%	-0.9%	3.9%	2.3%
F	2010	0.9%	2.4%	-0.2%	3.1%
F	2011	1.3%	3.0%	-0.9%	3.4%

growth in wages, employment, and inflation for 2008 and 2009, it is expected that wages per worker adjusted for inflation will turn negative in 2008, 2010 and 2011, a situation that has not been seen since the early nineties. Growth in real wages per worker is expected to be positive in fiscal 2009 because inflation is expected to be negative.

#### Montana Employment

Average annual growth in total employment between 1990 and 2007 has been 2.6 percent, although since 2000 the average rate of growth has been 1.4 percent. It is expected that employment growth through 2006 will be 2.0 percent and grow by about 1.2 percent in calendar 2008. Since 1990, the fastest growing sector in terms of employment has been construction, which experienced a 6.6 percent annual increase in employment. Other fast growing sectors have been professional and business services (5.5 percent annual growth), education and health services (3.2 percent annual growth), and accommodation and food services (3.1 percent annual growth). Sectors that have experienced reduced or stable employment since 1990 are mining and manufacturing. Mining employment is expected to increase during the forecast period.

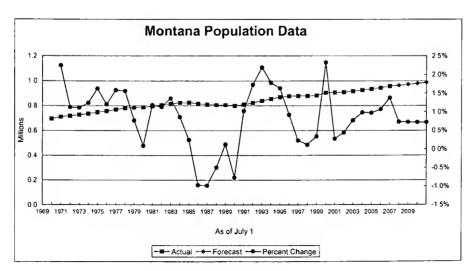

Employment is expected to decline in calendar 2009 by 0.6 percent and then increase moderately in calendar 2010 and 2011 by 0.9 and 1.3 percent, respectively.

#### **Montana Population**

Population statistics are used to develop estimates for many of the revenue sources including beer, wine, liquor, and cigarette taxes. In addition to those sources where population has a direct effect, the size of the population indirectly affects the profitability of all businesses and the employment levels statewide. Accurate population estimates are especially important when determining the changes expected in overall and per capita income for the state.

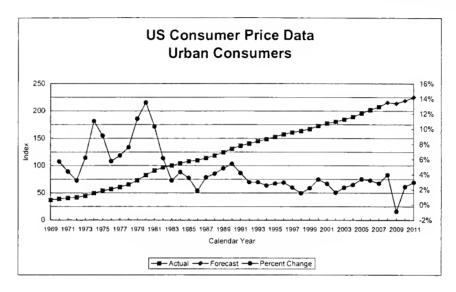

Consumption of any given item is highly reliant upon the size of the population, so accurate population forecasts are essential when determining tax revenues from the sources mentioned above. Historic population data is gathered from the U.S. Census department while projections are obtained from Global Insight. Since the early 1990's, Montana has experienced positive growth in total population varying between 0.1 percent in 1998 to 2.3 percent in 2000. Growth through the next biennium is estimated at about 0.7 percent annually.

#### **Inflation Rates**

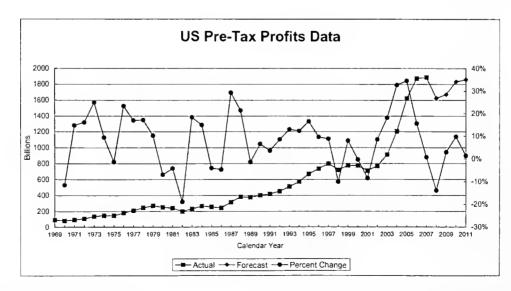

The inflation rate is measured by the price change of the Consumer Price Index (CPI) "shopping basket" of goods and services. Inflation is noted to have both good and bad effects. As prices rise, businesses increase prices and tend to become more profitable. At the same time, the consumer realizes a reduction in disposable income and spends less. Several areas where this information is vital in determining costs include minerals, timber, energy resources, and most services.

Since Montana's individual income tax structure is fully indexed by changes in the consumer price index, this assumption is critical in the formulation of the individual income tax forecasts. The U.S. Bureau of Labor Statistics provides the required CPI data for the all-urban customers data set. Since 1990, the average annual rate of inflation has been 2.8 percent. Global Insight forecasts inflation at 4.0 percent for calendar 2008, a negative 0.9 percent for calendar 2009, and 2.4 and 2.9 for calendar 2010 and 2011, respectively.

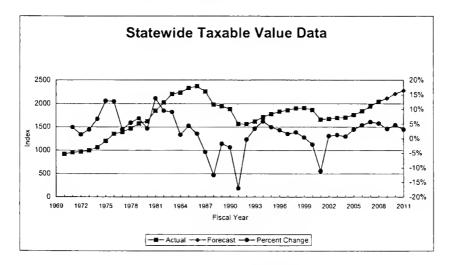

#### **Corporate Profits**

The profitability of corporate America is an important factor in estimating revenues. Corporate profitability affects both corporation license tax and individual income tax estimates. When corporations are profitable nationally, there is an expectation that corporations will be profitable in Montana. Additionally, greater corporate profitability is largely responsible for the amount of dividends corporations pay to stockholders as well as the value of equity investments. During the most recent years, the reduction of corporate profits has translated to lower corporate license tax collections. According to Global Insight, between 1990 and 1997, US corporation pre-tax profits increased by an annual average of 10.3 percent. However, from 1997 through 2001, profits decreased by an average of 3.0 percent, the greatest decrease of 8.5 percent occurring in 2001. In 2004 and 2005, corporate profitability increased by 32.7 percent and 34.5 percent respectively. That trend is not expected to continue, however, as Global Insight is estimating profits to decline by 13.9 percent in calendar 2009 and then grow moderately at 5.4 percent annually through 2011.

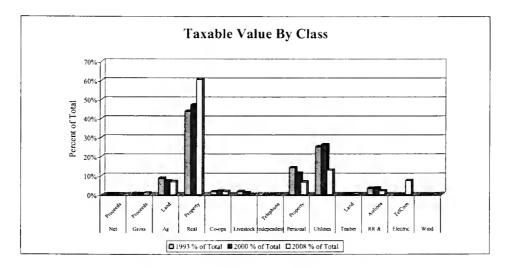

#### **Property Values**

Change in statewide property values is the critical assumption behind the estimates for property taxes. Historic property values are obtained from the Montana Department of Revenue. Total statewide taxable value increased slowly during the first part of the 1990's, but fell in fiscal 2000. This decline was primarily due to business equipment tax changes enacted by previous legislatures. Other reductions occurred in electrical generating and telecommunication property. Property values resumed an upward trend in 2001 and have increased every year since that time. That trend is not expected to continue through the next biennium because of the effects of the statewide reappraisal cycle. Taxable values are expected to increase at an annual average of 6.7 percent.

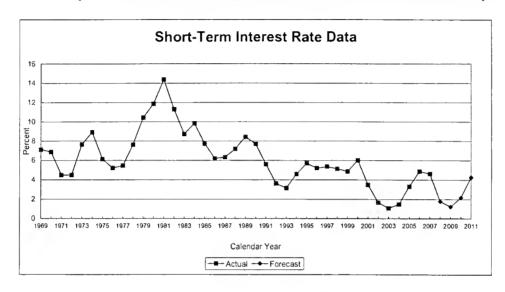

Significant changes have taken place in statewide property values since fiscal 1998. In that year, 48.0 percent of total statewide value was in class 4, residential and commercial property, and 11.5 percent of total value was in class 8, business equipment personal property. In fiscal 2008, the class 4 taxable value was 60.6 percent of the total property tax base, while class 8 was only 6.8 percent of the base.

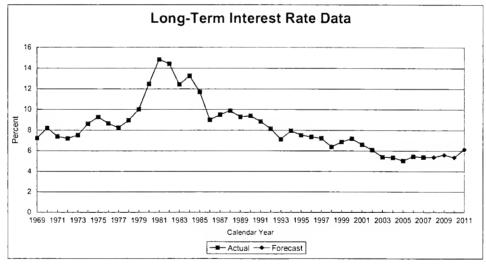

#### **Interest Rates**

A large portion of Montana's revenues is derived from investment earnings from trust accounts and daily invested cash. Interest rates also affect the amount of investment income that is reported on individual income tax returns. As such, interest rates are a significant assumption when estimating future state revenues.

In addition to the state revenue impact, interest rates are fundamental in understanding the climate in which consumers and businesses are likely to make investments and large purchases. While low interest rates produce less revenue for Montana's trust and interest holdings, higher income tax earnings might be expected as construction and sales activities increase. Two types of interest rates, long and short-term, are estimated and used in determining future revenues. Both rates are an average across a selection of investment instruments. The forecast rates are obtained from Global Insight. Long-term rates are an average of Corporate Aaa and Baa bonds, 10-year T bonds, and 30-year T bonds. Short-term rates are an average of 3-month Corporate paper and 3 and 6-month T-bills. The fiscal year computation of short-term interest rates reached an unprecedented low in 2004. However, as the economy began to regain strength in calendar year 2004, the Federal Reserve began increasing the discount rate. Global Insight projects short-term interest rates will decline sharply to about 1.0 percent and then rebound to 3.2 percent by fiscal 2009. Long-term rates are expected to remain stable through the 2011 biennium with a modest increase by fiscal 2011.

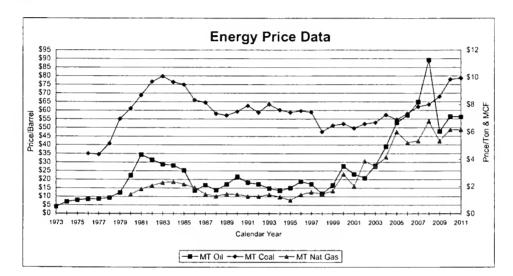

#### **Energy Prices and Consumption**

West Texas Intermediate (WTI) spot oil prices averaged \$25.96 per barrel in calendar 2001 and increased every year through 2007. Global Insight forecasts WTI oil prices to increase to \$101.36 in calendar 2008, and then drop to \$52.75 in calendar 2009. WTI prices are expected to increase to \$61.75 and \$65.00 per barrel for calendar 2010 and 2011, respectively. While Montana wellhead prices are considerably lower than the WTI price, Montana prices are expected to follow a similar trend.

Natural gas prices at the wellhead in the US averaged \$4.00 per MCF in calendar 2001 and have increased to \$6.22 by calendar 2007. Global Insight is forecasting average well head natural gas prices at \$7.81 in calendar 2008, \$6.45 in calendar 2009, \$7.49 in calendar 2010, and \$7.76 in calendar 2016. While Montana wellhead prices are usually lower than the US average well head price, Montana prices are expected to follow a similar trend.

After a period of decline in oil production – from a peak in 1973 of 34 million barrels to a trough in 1999 of 15 million barrels – recent Montana production has increased. New drilling activity increased 75 percent in 2003, and increased nearly the same amount in 2004. In calendar 2006, production was over 36 million barrels and is estimated to be near 34 million barrels in calendar 2008. Montana oil production is expected to decline further to 33 million barrels in calendar 2009, 31 million barrels in calendar 2010, and to 28 million barrels in calendar 2011.

Natural gas production in Montana almost tripled between 1981 and 2007, from 40 million MCF to 119 million MCF. Newly drilled wells have contributed around 20 percent to total production since calendar 2000. As in the oil market, new drilling activity was up substantially in calendar 2003 and 2004. Montana natural gas production is expected to be 122 million MCF in calendar 2008, 123 million MCF in calendar 2009, 124 million MCF in calendar 2010, and 120 million MCF in calendar 2011.

		-\$3

## **How to Use This Volume**

The following report is arranged into six main revenue sections. Each section contains revenue sources that share common characteristics, have many of the same assumptions, and have common estimating methodologies. The main sections of the report are:

- Business Taxes
- 2. Natural Resource Taxes
- 3. Interest Earnings
- 4. Consumption
- 5. Property Taxes
- 6. Other General Fund Revenue

The sections are marked by divider pages that list each revenue source within that section. The sources are arranged alphabetically within each section.

The report contains profiles of each revenue source estimated by the RTIC. Twelve categories of information are provided for each source. These categories and a short description of each follow:

**Revenue Description**: A brief description of the source is provided including the origin of the revenue and, in the case of taxes and fees, the item that is taxed.

**Statutory Reference:** These are the citations from the Montana Code Annotated (MCA) applicable to the revenue source and include citations for the tax rate, the distribution, and when the tax is due.

Applicable Tax Rate(s): This section provides an explanation of the tax rate or license fee, more detail on the items that are taxed, and other information such as exemptions, minimums, initial versus annual fees, etc.

**Distribution:** This section explains how the revenue is distributed. In cases where uses or entities other than general fund receive a portion of the revenue, percentage distribution or the dollar amount is discussed. This section also contains a simplified flow chart illustrating how the revenue received from the source is distributed in the state accounting system.

Collection Frequency: Timing of the revenue deposited in the state treasury may affect the revenue estimate. Most revenue is usually received on a quarterly or monthly basis.

% of Total General Fund Revenue: To give the reader an idea of the importance of a particular revenue source, its percentage of total general fund revenue for FY 2004 - FY 2008 is included.

**Revenue Estimate Methodology:** A general description of the revenue estimating methods is provided followed by a more detailed explanation of the methodology used to derive assumptions for the revenue source. Methods differ between sources and may change each biennium depending on circumstances. Specific information on the type and source of the data used, analytical techniques, and any adjustments are also provided. Charts are included to show major assumptions or components of the revenue source.

**Forecast Methodology:** This section includes a simplified flow chart illustrating the methodology used to determine the revenue estimates.

Revenue Estimate Assumptions: In most cases, the data provided in these tables can be used in the formulas shown at the bottom of the tables in the "Forecast Methodology" to derive the revenue estimate. The tables show the revenue estimates for fiscal years 2009, 2010, and 2011, the estimated general fund amount, and, if applicable, distributions to other funds or uses.

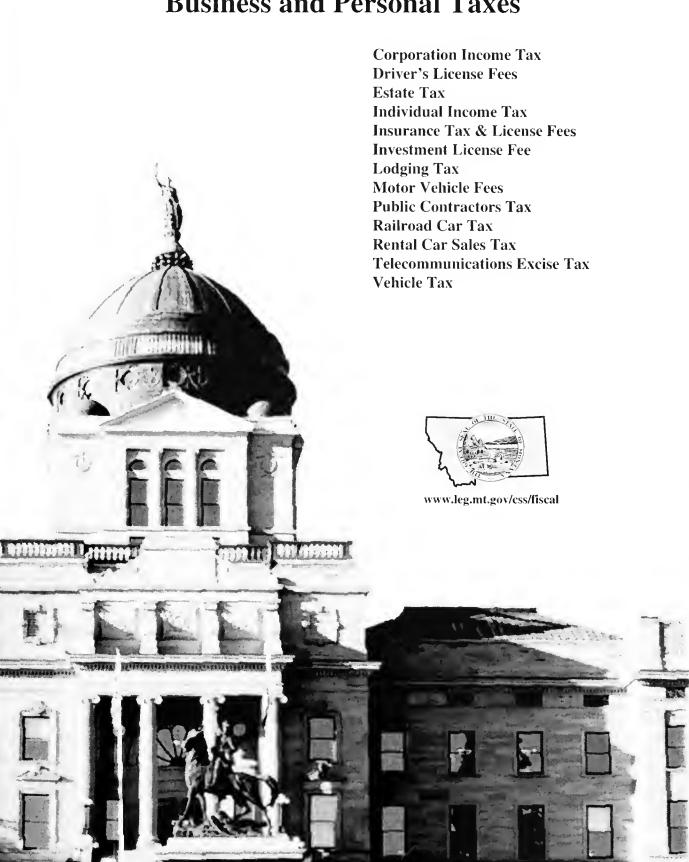

Revenue Projection: This section consists of a graph and accompanying data table. The line graph shows the amount of actual collections from FY 1987 and the projected amounts for fiscal years 2009, 2010, and 2011. Total collections are depicted by a dark line while general fund collections are shown by a lighter line. The data table contains historic information about this data source since 1987 including: 1) actual total collections; 2) actual general fund collections; 3) projected total and general fund amounts for fiscal 2009, 2010, and 2011; and 4) the yearly percentage change in general fund.

Data Source(s): The various state agencies, federal agencies, companies, information systems, publications, fiscal notes, etc., that were consulted or reviewed in the estimation process are listed.

Contacts: The reader may contact these entities for more information about the revenue source.

The remaining portion of this document is the RTIC revenue estimates by revenue source.

Revenue Estimate Profile

#### **Corporation Income Tax**

Revenue Description: The corporation income tax is a license fee levied against a corporation's net income earned in Montana. The corporation income tax is imposed on corporations that, for reasons of jurisdiction, are not taxable under a license tax. Factors that affect corporation income tax receipts include tax credits and the audit efforts by the Department of Revenue. As with individual income tax, all tax liability is adjusted for allowable credits.

#### **Statutory Reference:**

Tax Rate (MCA) - 15-31-121,

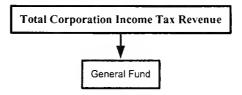

Tax Distribution (MCA) - 15-31-121

Date Due – by the 15<sup>th</sup> day of the fifth month following the close of the corporate fiscal year (15-31-111, 15-31-502). Estimated taxes due April 15<sup>th</sup>, June 15<sup>th</sup>, September 15<sup>th</sup>, and December 15<sup>th</sup> (15-31-502).

**Applicable Tax Rate(s):** The tax rate is 6.75%, except for corporations making a "water's edge" election (see 15-31-322, MCA), who pay a 7.0% tax on their net income.

**Distribution:** Beginning fiscal 2006, all corporation tax revenue is distributed to the general fund.

Distribution Chart:

Collection Frequency: Monthly, Quarterly, and Annually

#### % of Total General Fund Revenue:

FY 2004 - 4.90% FY 2007 - 9.67% FY 2005 - 6.42% FY 2008 - 8.17%

FY 2006 - 9.00%

#### **Revenue Estimate Methodology:**

#### Data

The data used to develop the estimates for the corporation income tax are provided by the Department of Revenue (DOR), the state accounting system (SABHRS), and Global Insight. The DOR provides corporation data from the corporation income tax return series that include total corporation income, Montana allocation information, and the Montana tax liability. The return series is dated information since corporations are allowed up to 10.5 months after the end of the tax year to file the return. The DOR also provides a series based on the corporation income tax payment data. This series provides more timely data and includes individual corporation payment by type (estimated, tentative, return, refund, audit). SABHRS provides historic fiscal year data of total collections, current year payments, estimated payments, audits and penalty and interest, and refunds.

Several steps must be taken prior to analysis of the corporation income tax data. The corporation tax estimate for the estimated period is calculated using the DOR payment data series. Upon receipt of the data series, the data is sorted by filing period. Next, the data is broken into three parts, taxpayers with tax liabilities greater than or equal to \$100,000 annually (based on a three year average), taxpayers with liabilities less than \$100,000, and taxpayers who pay the minimum tax of \$50. Finally, the large taxpayer data is disaggregated based on the industrial sector of the corporation. The data is then evaluated and adjusted when needed. If the data acceptably matches the SABHRS data, then the analysis process can begin.

#### Revenue Estimate Profile

#### **Corporation Income Tax**

In recent years, the DOR has provided more detailed corporation tax data, leading to the formulation of this new corporation tax methodology. First introduced and adopted by the 59<sup>th</sup> Legislature, this methodology has expanded with time. The concept involves measuring the growth of each individual industrial sector for the economic impacts expected in the upcoming years. Unfortunately, because of the limited number of tax year observations in the available data set, development of growth rates with economic models related to historic trends and patterns is not possible. Instead, and until enough data is available, growth rates developed by the Global Insight Economic Analysis Company and through related analysis performed by the LFD for other tax revenue sources necessarily replaces the development of growth rates.

#### Analysis

The corporation income tax exhibits high levels of variability in collections. Collection patterns show that current tax payments often originate in a previous year. Included in fiscal year data are late payments, audit payments, and refunds. These activities promote misinterpretation of how high, or low as the case may be, Montana corporate profitability is in any given tax year. A simple review of SABHRS data will not distinguish the many anomalies of the data, and may lead to the adoption of incorrect assumptions. The approach developed for the corporation estimate employs DOR corporation tax payment data to make future estimates as accurate as possible. By disaggregating the data based on corporate industrial sector, specific components of the corporate landscape can be analyzed, measured, and forecast individually with industrial sector projections.

Many corporate entities in Montana do not demonstrate profitability behavior like national corporations. For example, financial corporations lag the nation in profitability, and Montana's large natural resource base is as volatile as the commodity prices, affecting the payments of oil and gas, energy, mining, and timber corporations. To reflect the peculiar corporate profitability exhibited in Montana, the estimates of corporation tax payments are created through a detailed study of tax payments by industry. To ensure that proper growth is assessed to each industrial sector, the payment data of the high liability corporate tax payers is separated by industry and growth rates are established for each of the industrial sectors. The figure below shows each of the sectors that were developed in this process, it significance to total corporation tax collections, the source of the growth rates used in the estimates, and the rates used in the estimates. The table also includes a category for each small (domestic) and minimum taxpayers.

#### Assumptions:

• All Other – Making up 7.7 percent of the total tax liabilities reported in the corporate tax, the all other sector includes the large corporations whose industrial sectors are varied. Included in this sector are businesses that endeavor in bar and restaurant activities, construction activities, and information technology activities, just to name a few. This sector is assumed to more closely follow the national corporation profitability model. The growth factor used to project future tax liabilities in the this sector is developed in a model that regresses SABHRS total corporation tax data against the Global Insight "pre-tax corporation profits" variable, lagged one year, and a business cycle variable, which quantifies the revenue effect of economic downturns. The regression provided an R<sup>2</sup> rating of 0.88, which means that the regression analysis explains 88.0 percent of the variability in total corporation tax payments, when all other impacts are held constant.\*

Revenue Estimate Profile

#### **Corporation Income Tax**

- Box Store The box store sector includes large retail stores in Montana and represents 5 percent of the total corporate tax liability. Box stores have grown in relative importance in the corporate tax base, as more stores locate in the state. These businesses are assumed to follow the national trend for retail sales in the nation. To project future box store liability, a growth rate is developed by measuring the change of consumer spending for food, durable goods, and non-durable goods as historically tracked by the Bureau of Economic Analysis (BEA) and projected by Global Insight. Financial The financial sector is the third largest sector estimated in this methodology, with 15.7 percent of the corporation tax liability. This sector includes banks, bank holding corporations, insurance corporations, and investment activities. The financial sector is not expected to continue the same double digit rates of growth, demonstrated in past years, but instead will experience a significantly slower rate of growth in the years of this analysis. The factor used to project future financial sector tax payment growth rate is weighted average of the change in the Global Insight projections of all loans and credit and the S&P 500 index.
- Food The food sector, which accounts for 3.7 percent of corporation tax liability, includes corporations that produce and transport food products. The food sector has increased in recent years, and is expected to continue to demonstrate slow growth over the next three years. To project future food sector liability, the change in consumer spending for food items, as tracked historically by the BEA and projected by Global Insight, is applied to the tax year base.
- Health The health sector includes primarily corporations involved in the manufacture of pharmaceuticals and is
  responsible for almost 2 percent of the corporation tax liability. The sector has experienced significant growth in recent
  years. To project future health sector liabilities, the change in consumer spending for health and pharmaceuticals is
  applied to the tax year base.
- Minimum The minimum paying corporations, accounting for just 0.1 percent of corporation tax liabilities, are assumed to include corporations that are new start-ups, corporations who have experienced net operating losses, and small businesses. With consideration of the volatility of this sector, no growth rate is applied to the base year tax liabilities.
- Mining Montana's mining sector, consisting of 2.0 percent of large tax liability corporations, has gained new life in recent years as the price of almost all mineral commodities such as silver, gold, palladium, and copper has increased. However, the national mining industry is expected to experience declines in calendar year 2008 and 2010, followed by slow growth in the remaining year of this analysis. Consequently, mining corporations are assumed to be less profitable in the next biennium. The factor used to project future tax liability of this sector is the change mining Montana metal mine gross value, as tracked and projected by the Legislative Fiscal Division (LFD).
- Oil & Natural Gas The oil and natural gas sector has experienced high levels of profitability as the prices for petroleum based products have increased over the past two years, however the price per barrel of crude oil experienced a sharp decline in the third quarter of 2008, and is expected to continue to decline throughout 2009. The assumption of this analysis is that lower oil and gas prices will negatively affect the profitability of corporations of this sector. The factor used to project future oil and natural gas sector tax liabilities is derived from the change in the oil and natural gas gross values projected by the LFD specifically for oil and natural gas severance taxes.
- Railroad The railroad industry is responsible for 4.3 percent of Montana's corporation tax liability. The industry has demonstrated significant growth between tax year 2006 and 2007, but in future years the growth in rail industry's tax liability is expected to resume a more normal pattern. The factor used to project the future tax liability of the rail industry is the change in the Montana allocation of railcar value, as projected by the LFD for the railcar tax.
- Domestic The domestic "sector" consists of corporate entities from all industrial sectors and have average tax liabilities between \$50 and \$100,000. This "sector" has the greatest amount of overall tax liability, 24.7 percent. Many of the corporations in this sector are thought to operate solely in Montana and may be less profitable than their larger counterparts. With the diverse grouping of industrial types in this "sector", the growth factor used for the domestic sector is developed in a regression analysis, as discussed in the "All Other" sector discussion.
- Telecom The telecom industry, comprising 2.4 percent of the total corporation tax liability, includes telecommunications and internet technology companies. In Montana, the total tax liability of this sector has remained relatively constant in recent years, and that trend is expected to continue in the period of analysis. The growth factor used to project the tax liability of the telecom sector is the change in the proxy of taxable telecom receipts, as developed by the LFD in the estimate for the telecom tax.
- Timber The timber sector in Montana is highly volatile. Timber corporations come and go, as evidenced in the history of their tax liabilities. The timber sector is assumed to remain volatile and is expected to experience reduced activity in calendar year 2007 and 2008. The factor used to project future timber sector tax growth is derived from the change in the Global Insight projection for the production of wood products in the nation.

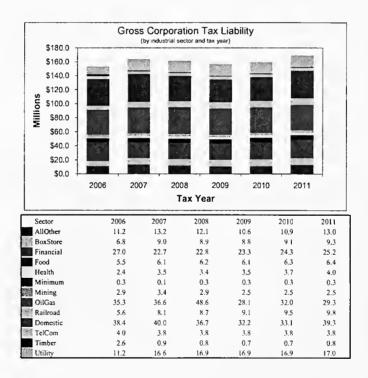

Revenue Estimate Profile

#### **Corporation Income Tax**

• Utility – Utility corporations include corporations that produce and transmit electric and gas utilities to consumers. In the past, utility corporations where among the largest corporations in the state. In more recent times, the tax liabilities of utility corporations have diminished. However, in the past two years, the utility sector has regained some significance, as demonstrated by its contribution of 8.7 percent of the total corporation tax liability. The utility sector is expected to assume a rate of slow growth for the foreseeable future. The factor used to project future tax liability growth is the change in energy production, as estimated by the LFD for the electrical energy tax.

\*For additional information concerning the statistics of fit for the model used for this projection, contact the Legislative Fiscal Division.

To develop the estimate for the corporation income tax, the sector growth rate is applied to the most recent tax year collections, 2007. The base year of 2007 is assumed to represent the most complete year of actual payments. The industrial sectors are then summed to provide an estimate for the tax year corporation tax liabilities. Because the industrial sector estimates are based on a tax year analysis, but are paid in a state fiscal year, payment timing must be taken into consideration. Analysis shows that the return payments made in the state fiscal year are made for the tax liability of the previous tax year. Estimated tax payments made in the first half of the fiscal year are assumed to be payments for the liabilities of the previous tax year and payments in the second half of the fiscal year are assumed to be liabilities of the current tax year. Audits and refunds are generally assumed to be corrections to tax liabilities of the prior year. When calculated, the analysis suggests that 60 percent of all corporation income taxes are for liabilities from the previous year and 40 percent of the taxes are from the current year. When the percentages of each tax year are combined, the resulting value is the fiscal year gross corporate tax liability.

#### Adjustment and Distribution

After the estimate for the fiscal year gross corporation tax liability is complete, several adjustments are required. The first adjustment is for new legislation passed by the 60<sup>th</sup> Legislature but not yet included in the tax base. The next adjustment is to account for the bonus depreciation provision of the Economic Stimulus Act of 2008. As calculated by the Department of Revenue, the revenue effects of the act will cause a reduction of corporation tax revenue in fiscal years 2009 and 2010, but will increase tax revenues in fiscal years 2011 through 2014. Finally, given the recent economic downturn, an adjustment is made to account for the likelihood of unusual net operating loss (NOL) impacts. Because NOL losses may be distributed over a number of years, the effect of an economic downturn, with its associated NOL's, is expected to reduce total corporation tax liabilities in all three years of the analysis.

#### Revenue Estimate Profile

#### **Driver's License Fees**

Revenue Description: A resident of Montana must have a valid driver's license to operate a motor vehicle on any highway in the state. A driver's license is issued only if the applicant passes specified examinations and pays fees. The fees are collected by Department of Justice, Motor Vehicle Division staff or county treasurers and are forwarded to the state treasurer for deposit. If collected by the county treasurers, a portion is retained by the county. The estimates shown in this source are net of revenue retained by the counties. The fees included in this source are from regular driver's licenses, commercial driver's licenses, motorcycle endorsements, duplicate driver's licenses, and renewal notices. Between October 1, 1995 and October 1, 1999, one-half of the licenses issued for those between the ages of 21 and 67 were 4-year licenses and one-half were 8-year licenses. Drivers outside these age brackets were assigned driver's licenses with terms which depend on how many years the driver is less than 21 or less than 75 years old. Between October 1, 1999 and July 1, 2005, all licenses for those 21-67 years of age were valid for 8 years. With the enactment of House Bill 192 by the 2005 legislature, commercial licenses are valid for 5 years.

#### **Statutory Reference:**

Tax Rates (MCA) – Duplicate license (61-5-114), all others (61-5-111(6)) Tax Distribution (MCA) – 61-5-121 Date Due – upon application

#### Applicable Tax Rate(s): Driver's license fees are:

- driver's license, except a commercial driver's license \$5.00 per year or fraction of a year
- motorcycle endorsement \$0.50 per year or fraction of a year
- commercial driver's licenses (includes the basic license fee of \$5.00):
  - o interstate \$10.00 per year or fraction of a year
  - o intrastate \$8.50 per year or fraction of a year
- duplicate license \$10.00
- renewal notice \$0.50

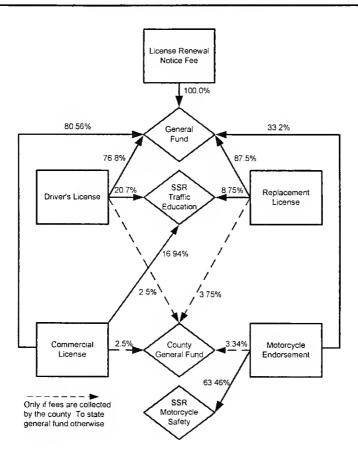

**Distribution:** The distribution of license fee revenue varies by the type of license and who collects the fee. The table shows the current statutory distribution. Note: the portion allocated to counties applies only when the county collects the fee. Otherwise, the county allocation is added to the general fund distribution.

FY 2006 - 0.22%

#### Revenue Estimate Methodology:

Deriving an estimate of driver's license revenue is a matter of determining an estimate for the number of each of the six various licenses/fees. Once determined, each number can be multiplied by the applicable fee and the resulting products added together to derive the total revenue estimate. Since the number of licenses depends on the number of drivers, an estimate of the number of people in the driving age bracket is also used in determining the estimate. As the distribution chart above shows, a portion of the revenue is collected and retained at the county level. Therefore, these revenue estimates only show the state's portion.

#### <u>Data</u>

There are six different sources of revenue - five different driver's licenses and the renewal notice. The best source of data for the number of licenses and the renewal notice is contained in the history of revenue collections for each of these six items. This information is readily available from the state accounting system (SABHRS) which records revenue from each source separately. By knowing the actual revenue collected from a specific fee and the amount of the fee, the number of licenses can be calculated. To adjust for population, population estimates for Montana are used (see "Montana Population" in the Montana Economic Outlook section at the beginning of this publication).

Revenue Estimate Profile

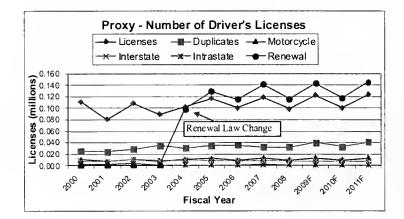

#### **Driver's License Fees**

#### Analysis

The methodology used to determine the number of each license/fee differs slightly:

- 1. The proxy numbers for driver's and motorcycle licenses are derived by multiplying the population estimate for those 16 years or older for each year by: a) for FY 2009 and FY 2011, the ratio between the number of licenses in fiscal year 2007 and the population for the previous year; and b) for FY 2010, the ratio between the number of licenses in fiscal year 2008 and the population for the previous year.
- 2. For duplicate licenses, the proxy number is derived by multiplying the number of driver's licenses by the previous year's ratio between the number of duplicates and drivers licenses. Because the driver's license proxy includes the effects of population change, these effects are also included in the proxy for duplicate licenses.
- 3. The proxies for the number of interstate and intrastate licenses are the amounts from the last known fiscal year.
- 4. To approximate the number of renewal notices, the ratio between the previous years' number of notices to the proxy number of licenses is multiplied by the estimated number of licenses. Since the license proxy includes the effects of population change, these effects are also included in the proxy for renewal notices.
- 5. Based on historical percentages, amounts retained by the counties are calculated and subtracted from the total revenue to derive the state's portion.

If necessary, adjustments are made; usually based on legislation enacted the previous legislative session. For example, the renewal notice was first authorized in October 2003 and, so, was in effect for 2/3 of fiscal 2004. Using fiscal 2003 actual collections required an adjustment to reflect a full year's revenue so future years could be estimated. Once the proxies for the numbers of various licenses are estimated, the revenue from each can be derived by multiplying the number by the applicable fee. The amount from each license are then summed and the portion retained by the counties subtracted.

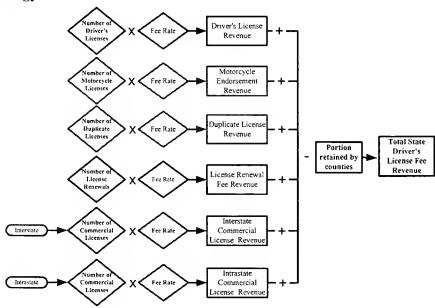

#### Adjustments and Distribution

Once the proxy number for each license has been estimated, adjustments, if any, are made. After any adjustments, the applicable distribution percentage of the revenue for each license fee is applied (see the "Distribution" section).

### Revenue Estimate Profile

### **Estate Tax**

Revenue Description: Due to passage of Legislative Referendum 116 by the electorate in November 2000, the state inheritance tax was repealed. The tax had been imposed on the transfer of any decedent's property, interest in property, or income from property within the state, to any other person or corporation except a surviving spouse, child or lineal descendant, stepchild, or governmental or charitable organization. Although the referendum was effective immediately, it applied to deaths occurring after December 31, 2000. Thus, inheritance tax revenue will continue to produce revenue, but the amount of revenue will decrease each year. In addition to the inheritance tax, an estate tax is imposed on estates transferred to heirs at death. The Montana estate tax is equal to the maximum estate tax credit allowed under federal estate tax law.

Congress passed the "Economic Growth and Tax Relief Reconciliation Act of 2001" which scheduled a step down approach to the repeal of the federal estate tax. Provisions of the act included the elimination of the state estate tax credit, the source of Montana's estate tax revenue. The estate credit of those who died in 2002, 2003, and 2004 is reduced by 25 percent per each year until 2005 when the credit will equal zero. Many years may pass before the time that estates are finally settled and the taxes of the estates are paid, and estate tax revenues are expected to become insignificant by the end of the decade. Federal estate tax laws will return to a pre-2002 level for deaths occurring in 2011 and forward if Congress does not take further action to make the repeal of the tax permanent.

Since 1980, revenues from inheritance taxes have fluctuated because of federal and state law changes, changes in wealth, changes in the death rate of the population, accounting procedures, and the processing of large estates.

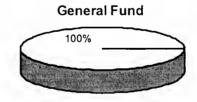

#### **Statutory Reference:**

Tax Rate (MCA) – 72-16-905 Tax Distribution (MCA) – 17-2-124(2), 72-16-1003 Date Due – 18 months after death (72-16-909)

#### **Revenue Estimate Methodology:**

#### Data

To create the estate tax projection, data are supplied by the Department of Revenue (DOR) and the state accounting system (SABHRS). The DOR provides the details of fiscal year tax filers on individual estates. SABHRS data provides aggregate historic

Revenue Estimate Profile

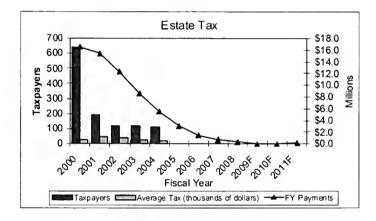

#### **Estate Tax**

collections of the estate tax

To prepare fiscal year data from DOR for analysis, several steps must occur. First, the data is separated based on the individual's year of death. This is a necessary step because the estate tax laws are imposed based on the year of death. Next, all new and prior year data is combined by year of death, and that data is sorted based on total tax payment. For the estate tax analysis, the tax filers who do not owe estate tax are ignored.

#### Analysis

The estate tax has undergone many changes over the past decade. Effective in fiscal 2001, the state eliminated the inheritance tax. Then, with the federal tax relief measures passed by Congress in 2001, the state's refund of the federal estate tax credit was reduced annually; by 25 percent in fiscal 2002, 50 percent in fiscal 2003, and 75 percent in fiscal 2004, and then eliminated for deaths occurring in and after fiscal 2005. At the same time, Congress enacted increasing levels of estate income exemptions, dramatically reducing the amount of tax imposed on estates. At this time, the state no longer collects any current year "death" tax of any sort. However, because of the length of time needed for estates to go through probate and emerge from trusts, estate tax payments are anticipated to continue for many years at steadily decreasing amounts.

Future collections of the estate tax are developed with a complex system of averaging. First, a ratio of taxpayers to deaths is created. The product of that ratio is then adjusted in recognition of the changes in the laws governing the "death" taxes. Next, the average tax paid by taxpayer is calculated. When those quantities are multiplied, the result is the expected estate taxes for the given year of death. The figure above shows the number of taxpayers and the average tax as calculated with this methodology from deaths occurring in 2000 through deaths occurring in fiscal 2004, the last year the federal government refunded the estate tax credit.

Finally, payments of the estate tax are distributed across the years based on an analysis undertaken by the DOR in the late 1990's. The distribution of the estate tax over the years is presented by the curve in the figure above. In their analysis, the DOR found that payments of the "death" taxes are spread over a large number of calendar year quarters. Factoring the quarterly payment proportions into calendar year proportions, it was determined that payments are spread across approximately 8 years at rates as seen in the figure at the right.

Estate Tax Payment S	Schedule
Year of Death	33.3%
1 Year Following Death	41.7%
2 Years Following Death	8.7%
3 Years Following Death	8.1%
4 Years Following Death	4.1%
5 Years Following Death	2.1%
6 Years Following Death	2.1%
7 Years Following Death	2.1%

As a result of this analysis, the estate tax is projected to be \$113,000 in fiscal 2009, \$29,000 in fiscal 2010, and \$5,000 in fiscal 2011

### Revenue Estimate Profile

## **Individual Income Tax**

**Revenue Description:** The tax is levied against taxable income, which is defined as Montana personal income adjusted for exemptions and deductions. Once tax liability is determined, the amount of tax due is computed by subtracting allowable credits.

#### **Statutory Reference:**

Tax Rate (MCA) - 15-30-103, 15-30-105, 15-30-106

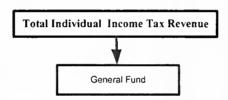

Tax Distribution (MCA) - 17-2-124(2)

Date Due – 15<sup>th</sup> day of the fourth month of the filer's fiscal year (15-30-144). Withholding taxes due monthly, quarterly, or on an accelerated schedule depending on income (15-30-204). Estimated taxes due on the 15<sup>th</sup> day of the 4<sup>th</sup>, 6<sup>th</sup>, and 9<sup>th</sup> month and the month following the close of the tax year.

**Applicable Tax Rate(s):** Tax rates vary from 1.0% to 6.9%, depending on the level of taxable income. Tax brackets, personal exemption amounts, and the standard deduction are adjusted by the rate of inflation in each year. SB 407, enacted by the 2003 legislature, created a new capital gains income tax credit. As a result the tax rate on capital gains income is less than the tax rate on ordinary income by 1 percent in tax years 2005 and 2006, and by 2 percent in tax year 2007 and beyond.

**Distribution:** All proceeds are deposited into the general fund.

#### Distribution Chart:

Collection Frequency: Withholding and estimated taxes are collected monthly, bi-weekly, and weekly.

FY 2004 – 43.82% FY 2007 – 45.04% FY 2005 – 46.13% FY 2008 – 44.17% FY 2006 – 45.01%

#### Revenue Estimate Methodology:

#### Data

There are three kinds of data required to make forecasts of individual income tax revenue. First is historical individual income tax return data, second is state and national historic data on income, inflation, employment, and other economic variables, and third is forecasts of economic activity that determine income and deductions.

Actual individual income tax return data are supplied annually by the Department of Revenue (DOR). This data are usually available in November and are for the prior tax year. The data include line-by-line tax return information for each state income taxpayer (except those that have been removed because of the existence of certain federal information).

The second set of data required is historical information on Montana incomes by type of income, inflation rates, employment, and other economic variables. These data are available from individual income tax returns, Bureau of Economic Analysis, Bureau of Labor Statistics, and Global Insight, a forecasting firm that provides forecasts of national and Montana economic activity.

The third set of data includes forecasts of economic conditions that determine income and deductions. These data are used to produce future growth rates for each income and deduction item, as explained in the methodology section below. Global Insight

## Revenue Estimate Profile

### **Individual Income Tax**

forecasts a myriad of state and national economic variables that are used to assess overall state and national economic activity.

#### Analysis

An individual income tax simulation model is used to forecast future Montana calendar year individual income tax liability for all residents. These forecasts are converted to fiscal year liability and are adjusted for audits and possibly one-time events. The individual income tax simulation model reflects the effects of SB 407, the legislation that changed the individual income tax system in Montana and was passed by the 2003 legislature. This legislation collapsed the tax brackets (with a top tax rate of 11 percent in the old system) into a system with 7 tax brackets (with a top rate of 6.9 percent). The model also limits deductibility of federal taxes paid to \$5,000 for single taxpayers and \$10,000 for married taxpayers.

The calendar year state tax liability forecasts are derived by applying growth rates to each resident taxpayer's income and deduction item. Since the latest year for which tax return data are available is tax year 2007, growth rates must be formulated for tax years 2008 through 2011. These growth rates are applied to each taxpayer's tax return data for each year. A sub-model within the simulation model also forecasts the federal individual income tax liability for each resident taxpayer. The result is a forecast of calendar year state individual income tax liability for each resident, the sum of which results in a statewide forecast of state individual income tax liability for each year.

The individual income tax data for tax year 2007 were adjusted when grown to 2008 by the amount of the federal rebate of \$600 per adult taxpayer, and \$300 per child. This reflects the one-time infusion of taxable income in 2008.

Credit Assumptions (Millions)											
		Calenda	аг уеаг								
	2008	2009	2010	2011							
Homeowner/Renter Credits	9.81	9.81	9.81	9.81							
Endowment Crdit	2.87	3.02	3.17	3.33							
Insurance Credits	3.80	3.80	3.80	3.80							
Capital Gains Credit	34.95	28.89	32.25	36.63							
Other Credits	33.29	33.60	34.31	35.36							
Total Credits	84.73	79.12	83.34	88.93							

The statewide forecast of resident individual income tax liability is multiplied by an all-filers percentage. This step is required so the estimates include the tax liability for non-residents. In tax year 2007, nonresidents and part-time residents were 6.0 percent of resident filers. The next step is to adjust the all-filers calendar year tax liability by the expected future growth in the number of taxpayers. This results in a forecast of total calendar year individual income tax liability before credits. From this amount, an estimate of allowable credits are deducted. The credits are shown in the table above. The result is a calendar year individual income tax liability for each future year.

#### Fiscal Year Conversion

The calendar year liabilities are then converted to fiscal year liabilities by summing an allocation of the prior calendar year's liabilities with an allocation of the current calendar year tax liability. A prior analysis indicated that the percentage to apply to the prior year is 47.9 percent and to the current year is 52.1 percent.

#### Audits and Other Assumptions

Once fiscal year liabilities are determined, a calculation of the growth rates between fiscal years is developed. These growth rates are then applied to the latest fiscal year (FY 2008) collections of individual income tax by the state. Before the growth rates are applied, however, the latest collection of individual income tax revenue is adjusted by subtracting out audit and other unusual collections. For instance, in FY 2008, total individual income tax collections were \$866.6 million, of which \$30.6 million was audit collections. This amount was adjusted further by an estimate of excess payments made by taxpayers in FY 2009 made in October 2008. It is believed that in calendar 2007, taxpayers overpaid \$14.4 million in taxes, the refunds for which were made in October 2008. Current refund activity in October 2008 supports this supposition. It is possible this was due to tax payers not adjusting their withholding when the capital gains credit rose to 2 percent in tax year 2007.

Revenue Estimate Profile

### **Individual Income Tax**

Audit and Other Assumptions (Millions)										
	Fiscal Year									
	2009	2010	2011							
Audits, Penalties and Interest	30.84	31.32	32.15							
Excess Reunds in FY 2009	(14.45)		-							
Other Adjustments to FY 2008 Base Year Collections	9.02	-	-							
Legislation Impacts	5.10	5.11	5.11							
Depreciation Bonus	(0.52)	(0.72)	0.14							

Another adjustment was made for the net effect of several impacts on FY 2008 collections as a result of legislation in 2007. First, the collection data in FY 2008 reflects a reduction in normal revenue due to the \$140 residential property tax credit available for tax year 2007. Thus \$25.0 million was added to the collections in FY 2008. Second, an amount of \$10.1 million was subtracted from FY 2008 collections that reflects the net effect of the new program by the department to collect natural resource taxes by withholding. This amount represents an acceleration of revenue that will not be repeated in the future. Third, \$2.8 million was subtracted to reflect the taxes associated with the one-time \$400 state property tax rebate for residential property taxes that was made in late 2007. Fourth, \$3.1 million is subtracted from FY 2008 collections to reflect insurance credits. Thus, the growth rates for the estimates in fiscal years 2009 through 2011 are applied to an adjusted base number of \$836.2 million. Once the amount of anticipated revenue before audits has been forecast, an estimate of future audit receipts as provided by DOR is added. Finally the estimates of individual income tax revenue are adjusted by the effects of other legislation passed in 2007

#### **Growth Rates**

The table below contains the growth rates used to forecast calendar years 2008 through 2011 individual income and deduction items.

Revenue Estimate Profile

### Insurance Tax & License Fees

**Revenue Description:** The insurance premiums tax is levied on the net premiums or gross underwriting profit for each insurance company operating in Montana. Gross underwriting profit is essentially insurance premium income. In addition, various insurance and license fees are also collected.

#### **Statutory Reference:**

Tax Rate (MCA) – 33-2-705(2), 33-2-311, 33-28-201(1&2), 50-3-109(1)

Fee Rate (MCA) – 33-2-708(1&2), 33-14-201(2), 33-2-712, 33-38-105

Tax Distribution (MCA) – 33-2-708(3), 33-2-712, 50-3-109(1), 33-28-120

Date Due – March 1<sup>st</sup> each year (33-2-705(1), 33-2-712, 33-28-201(1&2)). Quarterly payments due the 15<sup>th</sup> of April, June, September, and December (Administrative Rules 6.6.2704, 6.6.2705)

**Applicable Tax Rate(s):** The current tax rate is 2.75% of net premiums (including cancellation and return premiums) on policies sold in Montana. In addition to this tax, there is a 2.5 % tax on the fire portion of net premiums for selected risks. Beginning FY 2008 with the enactment of HB 278 (2007 session), for each Montana resident insured under any individual or group disability or health insurance policy, all insurers are required to pay \$1.00 to the State Insurance Commissioner. The fee had been scheduled to be reduced to \$0.70 but the legislation extended the \$1.00 fee indefinitely. This fee is deposited to the state special revenue fund and used to fund the statewide genetics program established in statute (50-19-211, MCA). Senate Bill 132 (passed by the 1999 legislature) eliminated many disparate fees on insurance companies, which had partially been deposited into the general fund, and replaced them with a single company annual fee of \$1,900. Revenue from this fee is deposited to the state special revenue fund for administration of insurance activities. The following lists various insurance related fees.

**Distribution:** With the approval of Initiative 155 by the electorate in November 2008, 67 percent of insurance tax proceeds from the tax on surplus lines premiums and net premiums are deposited into the general fund. The remaining 33 percent of the revenue is deposited to the state special revenue to expand the children health insurance program and Medicaid eligibility of uninsured children. All fire insurance premiums are deposited to the general fund. Due to enactment of SB 161 by the 2007 legislature, five percent of premium tax revenue from captive insurance company and all fees and assessments on captive insurance companies are deposited to a state special revenue fund to be used to administer captive insurance captive insurance company statutes and reimburse expenses incurred in promoting captive insurance in Montana. The other 95 percent of captive insurance premium tax revenue is deposited to the general fund. License fees and the 1% stamping fee on surplus lines insurance premiums are deposited into the state special revenue fund for use by the State Auditor. Beginning October 2005, the genetic fee revenue is deposited to the state special revenue fund.

#### Distribution Chart:

Revenue Estimate Profile

### **Insurance Tax & License Fees**

Collection Frequency: Quarterly and annually

#### % of Total General Fund Revenue:

FY 2004 - 4.11%

FY 2007 - 3.33%

FY 2005 – 3.74%

FY 2008 - 3.26%

FY 2006 - 3.44%

#### Revenue Estimate Methodology:

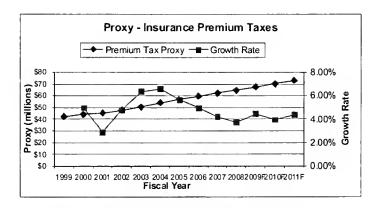

The large majority of insurance tax and license fee revenue is from premium taxes with minor amounts from a multitude of different fees. Estimates are made for these components based on measures of growth and then summed. This total is reduced by estimates of refunds and guarantee offsets. Guarantees are amounts that members of the Montana comprehensive health associations are required to pay into a reserve account (up to 1 percent of the total disability insurance premium received from Montana residents). The amount of these payments reduces (offsets) premium tax liabilities dollar for dollar (33-22-1513(7), MCA).

#### Data

The state accounting system provides historical collection data for the various components needed for the analysis. These include collections of insurance premium taxes, genetics program fees, and various general fund and state special revenue fees. The State Auditor's Office provides historical data on offsets and refunds as well as estimates for these items for the 3-year period.

#### **Analysis**

Because offsets and refunds can vary substantially, the technique used to estimate the premium tax revenue component of this source begins by adding the offset and refund amounts to the amounts shown on the state accounting system to derive a "true" amount of taxes. To estimate premium taxes, an exponent to the base of the natural logarithm is determined from a regression analysis based on long-term interest rates from FY 1990 to FY 2008. Premium taxes paid and long-term interest rates show an inverse relationship.

From the estimated amounts, offsets and refunds as estimated by the State Auditor's Office are subtracted to derive the amount of net premium taxes expected to be received by the state.

If no better information is available, the estimates for the other components such as genetics program fees, general fund fees, and state special revenue fees are a continuation of the last known fiscal year amounts.

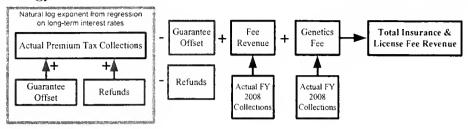

#### Adjustments and Distribution

Once each component has been estimated, adjustments if any, are made. Since each component is estimated separately and each goes to either the general fund or the state special revenue fund, the distribution of the revenue has already been done.

**Distribution:** All fees except portfolio notice filing fees and examination charges are deposited to the general fund. Portfolio notice filing fees and examination charges are deposited in a state special revenue account from which the State Auditor pays for expenses associated with the regulation of portfolio activities. The excess in this account is transferred to the general fund throughout the year as a non-budgeted transfer and is shown under the "All Other" revenue category.

Revenue Estimate Profile

### Investment License Fee

#### **Distribution Chart:**

Collection Frequency: Varies

#### % of Total General Fund Revenue:

FY 2004 - 0.35%	FY 2007 - 0.33%
FY 2005 - 0.34%	FY 2008 - 0.33%
FY 2006 - 0.33%	

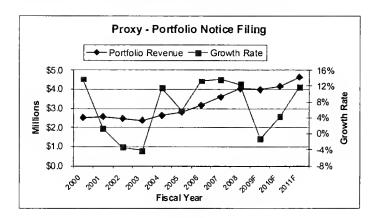

**Revenue Estimate Methodology:** Investment license fee revenue is obtained from two major sources: 1) portfolio notice filing and examination fees (state special revenue); and 2) many other varied fees (general fund). The portfolio notice filing fees, examination fees, and other permit revenue are estimated separately and then summed.

#### Data

The state accounting system (SABHRS) provides historical collection data for the state special revenue portfolio notice filing fees. Revenue from examination fee and fees distributed to the general fund is also available and, depending on the analysis technique used to derive the estimate for this source, this data is also used. The State Auditor's Office provides revenue estimates of the general fund and examination fees in its biennial budget submission for the 3-year period under consideration. Also provided in the budget submission are requested appropriations for the portfolio regulatory program that are needed to determine the transfer amount of portfolio notice filing and examination fee revenue to the general fund.

#### **Analysis**

To estimate the revenue from the portfolio notice filing fee, licenses, and permits, the same technique is used. A regression analysis of collections from FY 2000 to FY 2008 based on the S&P Index provides yearly growth rates. The rates are applied to each previous year to derive the estimate for each fiscal year (see the figure below).

#### Adjustments and Distribution

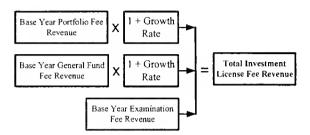

Once each component has been estimated, adjustments, if any, are made. Since the general fund and the state special revenue component are estimated under separate methodologies, the distribution of the revenue has already been done. However, there is a

Revenue Estimate Profile

## **Investment License Fee**

further distribution of the portfolio notice filing and examination fee revenue after it is in the state special revenue fund. Once there, the revenue is reduced by estimates of the appropriations required by the State Auditor's Office to regulate portfolio activities. The remaining amount of the fee revenue is then transferred to the general fund. The general fund transfer amounts are not shown in this revenue source, but are shown in the "All Other" revenue source.

Revenue Estimate Profile

## **Lodging Taxes**

Revenue Description: The state imposes two taxes on room charges collected by lodging facilities and campgrounds – a lodging sales tax and a lodging facility use tax. The taxes only apply for rooms used for lodging.

The 3 percent <u>lodging sales tax</u> began June 1, 2003 and applies to hotels, motels, campgrounds, resorts, dormitories, condominium inns, dude ranches, guest ranches, hostels, public lodging houses, and bed and breakfast facilities. Exempt are facilities: 1) for health care; 2) owned by non-profit corporations for use by people under 18-years of age for camping; 3) whose average daily charge is less than 60 percent of the amount the state of Montana reimburses for lodging; or 4) rented for 30 days or more. Sales to the U.S. government are also exempt from the sales tax. All facilities subject to the tax must obtain a seller's permit before engaging in business subject to the sales tax within Montana. The vendor must pay the tax due by the last day of the month following a calendar quarter. Vendors are allowed to claim and keep five percent of the tax as an allowance, not to exceed \$1,000 a quarter. The Department of Revenue may require a retailer to post security up to twice the average tax liability to be used to recover taxes, interest, and penalties owed.

The 4 percent <u>lodging facility use tax</u> applies to facilities containing individual sleeping rooms or suites, providing overnight lodging for periods of less than 30 days to the general public for compensation. This includes hotels, motels, campgrounds, resorts, dormitories, condominium inns, dude ranches, guest ranches, hostels, public lodging houses, or bed and breakfasts. Exempt are: 1) non-profit or religious corporation facilities used primarily by persons under 18 years of age for camping; 2) facilities whose average daily charge does not exceed 60 percent of the amount the state of Montana reimburses for lodging; or 4) rented for 30 days or more. All facilities must be registered with the Department of Revenue. Any of the tax paid by state employees is returned to the fund that paid the tax. Since general fund pays a portion of the tax, a portion is returned to the general fund. This amount is also shown in the "All Other Revenue" profile.

### **Statutory Reference:**

Tax Rate (MCA) – 15-65-111 (lodging facility use tax), 15-68-102 (lodging sales tax)

Tax Distribution (MCA) – 15-65-121 (lodging facility use tax), 15-68-820 (lodging sales tax)

Date Due – <u>Lodging facility use tax</u> is due before the end of calendar quarter (15-65-112). The <u>lodging sales tax</u> is due the last day of the month following the calendar quarter (15-68-502(1)).

**Applicable Tax Rate(s):** The <u>lodging sales tax</u> is 3.0 percent of the sales price. The <u>lodging facility use tax</u> is 4.0 percent of room charges.

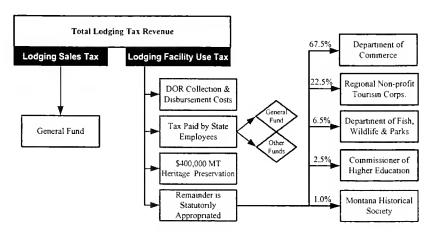

#### Distribution:

- 1. Sales Tax: 100% general fund
- 2. Lodging Facility Use Tax: The revenue is first distributed: 1) to the Department of Revenue in the amount appropriated for collection and disbursement costs; 2) to the various funds from which payments of the tax paid by state employees were made, including the general fund; and 3) \$400,000 to the Montana heritage preservation and development fund which is statutorily appropriated for restoring and maintaining historic properties. After these distributions, the remainder is distributed and statutorily appropriated:
  - o 67.5% to the Department of Commerce for tourism promotion and promotion of the state as a location for the production of motion pictures and television commercials.
  - 22.5% to regional nonprofit tourism corporations.
  - o 6.5% to the Department of Fish, Wildlife and Parks for maintenance of state park facilities.
  - o 2.5% to the university system for the establishment and maintenance of a Montana travel research program.
  - 1.0% to the Montana Historical Society to install and maintain roadside historical signs and historic sites.

Revenue Estimate Profile

## **Lodging Taxes**

#### Distribution Chart:

Collection Frequency: The owner of a facility collects the tax and remits it quarterly to the Department of Revenue.

#### % of Total General Fund Revenue:

A small portion for reimbursement of lodging facility taxes paid by state employees is included in "All Other General Fund Revenue"

FY 2004 – 0.67%

FY 2007 - 0.70%

FY 2005 - 0.67%

FY 2008 – 0.68%

FY 2006 - 0.63%

### Revenue Estimate Methodology:

#### <u>Jata</u>

Data from the state accounting system (SABHRS) is used to prepare the estimate for the two lodging facility taxes. Additional data, such as the consumer price index projections, provided by the Global Insight, and non-residential tourism expenditures, provided by the Institute for Tourism and Recreation Research, is used to evaluate the results of the methodology.

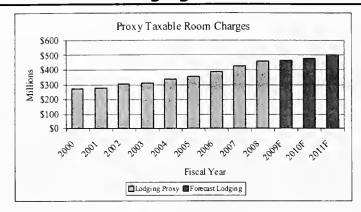

Total lodging taxes are made up of two separate taxes, the lodging facility use tax, which is deposited into state special revenue accounts to fund state tourism activities, and the lodging sales tax, which is deposited into the general fund. The same base, in the form of a proxy for taxable room charges, is used as the starting point both sources, and both taxes are estimated using a single proxy of the taxable room charges in Montana.

#### Analysis

Because the lodging taxes exhibit relatively consistent growth from year to year, the projection of the proxy for lodging receipts is estimated using a linear trend regression model. The trend is based on the proxy taxable room charges, beginning in fiscal 1988 when the tax was first assessed. The results of the model are depicted in the figure below.

Revenue Estimate Profile

# **Lodging Taxes**

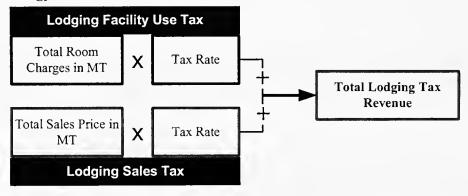

The statistics of fit show that a linear trend accurately measures the rate of growth in the number of taxable room charges in Montana. The regression model utilizes three independent variables. The main variable of the model is the passage of time, and two dummy variables (variables with a value of 0 or 1) serve to reduce extreme variations in the data series (1992 and 2003). The model provides an R<sup>2</sup> rating of 0.993. This means that the linear trend explains 99.3 percent of the variability of the number of taxable room charges in Montana, when all other impacts are held constant.\* The model produces an estimated increase in taxable room charges equal to approximately 3.0 percent per fiscal year. The model predicts taxable room charges of \$464.2 million, \$480.0 million, and \$500.1 million in fiscal years 2009 through 2011, respectively.

After the projections for the taxable room charges are determined, the amounts are reduced by ratio to account for the difference apparent in the taxable room receipts of the lodging facility use tax and lodging sales tax. Finally, the estimates for each of the taxes are determined by multiplying the estimates of taxable room charges by the tax rate. Revenue from the two taxes is then added together to create the gross fiscal year estimates of the lodging facility taxes.

#### Adjustments

Several adjustments are required before the revenues of the lodging facility use tax are distributed. A portion of the collections is distributed to the DOR to cover the expenses associated with administration of the tax and reimbursements are provided to the general fund and other funds for the tax paid by state employees who stay in lodging facilities in connection with their jobs. After the gross lodging facility use tax estimates are adjusted, the remainder of the revenues flow to the statutorily designated agencies.

#### Forecast Methodology

<sup>\*</sup>For additional information concerning the statistics of fit for the model used for this projection, contact the Legislative Fiscal Division.

### Revenue Estimate Profile

#### **Motor Vehicle Fee**

**Revenue Description:** The state assesses a variety of motor vehicle fees, such as fees for the filing of motor vehicle liens, fees for new license plates, title fees, and annual and permanent registration fees. The fees vary according to the type of vehicle (i.e., motor vehicle, snowmobile, etc.) and the type of license plate (regular, personal, military, etc.). There are also Gross Vehicle Weight (GVW) fees on trucks and pickups, as well as special fees for senior citizen transportation, veteran services, the highway patrol pension fund, salaries for the highway patrol, motorcycle safety, electronic commerce applications, and an optional \$4 registration fee on light vehicles for state parks and fishing access sites.

Effective January 1, 2004, all fees on motorcycles and quadricycles, trailers, travel trailers, snowmobiles, off-highway vehicles, and watercraft are one-time only and permanent, except upon change of ownership. Fees on other vehicles are annual. Light vehicles older than ten years old may be licensed permanently, at the option of the owner. New license plate fees increased from \$2 to \$5. The registration fees on campers and pontoons and rubber rafts are eliminated. Beginning January 1, 2005, the registration fees on all light vehicles increased, as did permanent fees on recreational trailers, off-highway vehicles, snowmobiles, recreational vehicles, and motorcycles. Beginning January 2006, motor homes 11 years or older may be permanently registered and the registration fee for certain vehicles increased \$5 to fund Highway Patrol salaries.

Due to changes enacted by HB 671 and SB 285 in the 2005 legislature, registration fee revenue reported by counties on the county collection report are now being recorded as vehicle taxes. Therefore, revenue shown for this source shows a large decline in FY 2006 from FY 2005, but revenue increases by a like amount in the "Vehicle Tax" revenue source. Due to enactment of HB 90 by the 2007 legislature, lien filing fee increases are extended through June 2016 and certificate of title fee increases are extended through June 2018.

#### Statutory Reference:

Tax Fee rate – multiple, but generally in Title 61, chapter 3. Permanent registration 61-3-562

Tax Distribution (MCA) – all fees in Title 61 are distributed to the general fund unless stated otherwise (61-3-108)

Applicable Tax Rate(s): Various

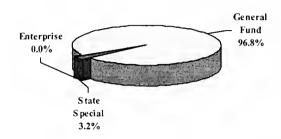

**Distribution:** Most motor vehicle fees are allocated to the general fund. The following fees are distributed to the Motor Vehicle Information Technology Systems state special revenue account: 1) \$4 of the \$8 recording lien fee (including boats, snowmobiles, and off highway vehicles); 2) \$5.00 of the \$10.00 certificate of ownership fees for watercraft, snowmobiles, off-highway vehicles and all other vehicles; 3) \$5.00 of the \$10.00 duplicate certificate of ownership fee; and 4) all of the \$10.00 fee for the issuance of a new certificate of title following the release of a lien. Other distributions to other state special revenue accounts (and county general fund) are: 1) \$10 of the \$30 donation fee for collegiate license plates to the student academic scholarship fund or foundation of the named institution; 2) the annual donation fee of \$20 for motorcycle or quadricycles specialty license plates for grants to chronically or critically ill children; 3) \$5 of the \$15 administrative fee for generic specialty license plates to the county general fund; 4) all of the \$15 surcharge for sponsoring a generic patriotic license plate for the construction, maintenance, operation, and administration of state veterans' cemeteries; and 5) with the enactment of SB 285 by the 2005 legislature, the optional \$4 fee for parks is deposited in a state special account rather than the general fund. With the enactment of HB 671 by the 2005 legislature, revenue from the newly enacted temporary registration fees of \$3 and \$8 are deposited in a non-budgeted enterprise fund.

Revenue Estimate Profile

### **Motor Vehicle Fee**

Distribution Chart:

#### **Based on Actual Fiscal 2008**

Collection Frequency: The various fees are generally collected on a monthly basis.

#### % of Total General Fund Revenue:

FY 2004 – 2.22% FY 2007 – 1.03% FY 2005 – 2.00% FY 2008 – 1.07% FY 2006 – 1.24%

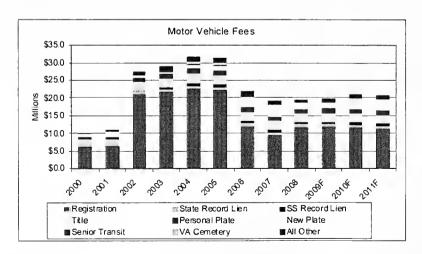

#### Revenue Estimate Methodology:

#### Data

The data used to estimate the motor vehicle (MV) fees are obtained from the state accounting system (SABHRS) and Global Insight. No adjustments are required on the raw data in preparation for analysis.

#### **Analysis**

MV fees are currently imposed at different rates on eight major categories. Included in the fees assessed on motor vehicles in Montana are registration fees, two types of record liens, title fees, personal and new plate fees, senior transit fees, and veteran's administration fees. The ninth category is made up of other miscellaneous fees assessed on motor vehicles. As shown in the figure below, the collection of motor vehicle fees has been highly variable since fiscal 2000. The figure below also shows the impact of the reduction and subsequent change in classifying vehicle registration fee revenue as vehicle tax revenue in fiscal 2006 and fiscal 2007. This change in the vehicle registration fees is the combined impact of SB 285 and HB 671, both implemented in the 2005 session. However, since registration fee revenues are now recorded as vehicle taxes, the net change to total revenues is zero.

## Revenue Estimate Profile

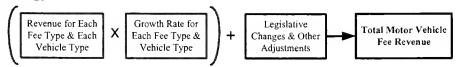

### **Motor Vehicle Fee**

With constant fees, the future change in MV fees results from change in the vehicle stock in Montana. Because fee payments are directly connected to the number of vehicles in the state, estimates for the MV fees are made by applying estimated growth rates to the pervious year revenue. Growth rates for the stock of Montana vehicles are derived by first obtaining Global Insight estimates for the national vehicle stock, new car sales nationwide, and for Montana. A ratio is then developed to project the stock of Montana vehicles. An average of the Montana stock in the current and previous years is used in this estimate from which growth between two years is calculated. The growth rate is applied to the base year (fiscal 2008 less one-time amounts due to HB 737) revenues of each fee category and projected forward at the same rate for all estimated fiscal years. The estimated tax collections of each category are then combined to create the total estimates for the MV fees.

#### Adjustments

In past years, adjustments to MV fees have been required as a result of legislative actions. House Bill 737 enacted by the 2007 Legislature requires that new license plates be issued every four years beginning January 1, 2010. Estimates provided by the Department of Justice add \$1.4 million in FY 2010 and \$1.6 million in FY 2011. The legislation also required new license plates be issued every four years beginning January 1, 2008. Revenue impacts from this legislation are added to FY 2009.

Revenue Estimate Profile

### **Public Contractors Tax**

**Revenue Description:** Contractors or subcontractors submitting a proposal to perform construction work in Montana for the federal government, state government, or any political subdivision, must be licensed as a public contractor. A license is not required in order to bid on contracts in which federal aid is used for highway construction, but a license is required once the bid is awarded.

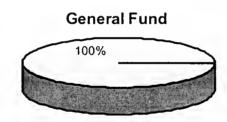

### **Statutory Reference:**

Tax Rate (MCA) – 15-50-205 Tax Distribution MCA) – 15-50-311 Date Due – within 30 days after payment to the contractor (15-50-309)

**Applicable Tax Rate(s):** A 1.0 percent license fee is applied to the gross receipts of each separate project let by any of the listed public entities. However, a credit (in the form of a refund) against the license fee is allowed for personal property taxes and certain motor vehicle fees paid in Montana on personal property or vehicles used in the business of the contractor. In addition, the amount of the net license fee paid (gross less the property tax refund) may be used as a credit on the contractor's corporate or individual tax return. Overpayments are also refunded.

**Distribution:** All public contractor tax revenue is deposited into the general fund.

#### Distribution Chart:

Collection Frequency: Monthly

#### % of Total General Fund Revenue:

FY 2004 - 0.15% FY 2007 - 0.30% FY 2005 - 0.09% FY 2008 - 0.26% FY 2006 - 0.25%

### **Revenue Estimate Methodology:**

#### Data

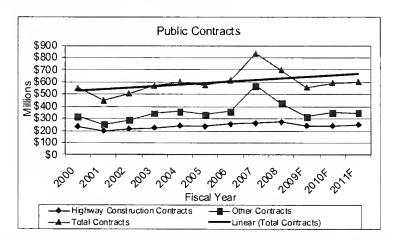

Data for the public contractor's tax are obtained from the state accounting system (SABHRS), the Department of Transportation (DOT), and the Department of Revenue (DOR) and are used to make the public contractors gross receipts tax (PCGRT) estimate. SABHRS data are utilized for total fiscal year tax collections. The DOT provides estimates of highway contracts for future biennia. The DOR provides information on the amounts of credits and refunds paid in each fiscal year.

Several steps are involved in preparing the data for analysis. After collecting the SABHRS total collection data, net tax collections are increased to account for the reductions of refunds and credits, creating a proxy for gross tax collections. From there, the gross tax data must be disaggregated into two contract classifications, highway and all other contracts. This is done by reducing the

Revenue Estimate Profile

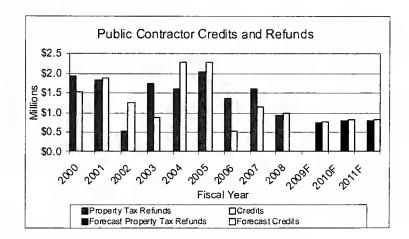

# **Public Contractors Tax**

gross tax by the total amount of highway/road contracts, also obtained through SABHRS. Historically, highway contracts have been responsible for almost 42 percent of the gross tax collections.

The remainder of the gross collections can be credited to other types of contracts. These contracts include forestry, bridge construction, and public building projects. The figure above shows both the aggregated and disaggregated Montana public contract values and a trend line illustrating the slow rate of growth inherent in the aggregated public contracts, approximately 2.1 percent annually.

The DOR provides historical data of refund and credit activity for the analysis. The PCGRT revenue has been highly variable over time. However, the variability is not caused by volatility in the number of contracts but instead by inconsistencies in processing payment of refunds and credits. As apparent in the figure below, the DOR deferred some of the refund and credit processing in fiscal years 2002 and 2003, creating a processing backlog. Consequently, processing for those years was postponed to fiscal years 2004 and 2005, exaggerating the credit and refund amounts.

PCGRT refunds are made up primarily of refund claims against the class 8-business property tax. Changes in the property tax rate, such as in fiscal 2000 when the rate was reduced from 6 percent to 3 percent, affect the amount of refunds. Credits are authorized for both individual income tax and the corporation license tax. The credit series as observed in the figure above is a combination of both individual and corporation credits.

#### **Analysis**

Analysis of the PCGRT shows a growth of Montana highway contracts at 3.4 percent annually. However, highway contract growth is highly reliant on federal appropriations for highway construction in the state. Each biennium, the DOT legislative

Revenue Estimate Profile

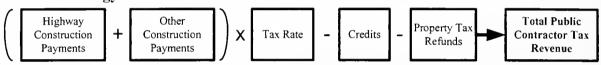

# **Public Contractors Tax**

budget shows the amount of contracts that are expected in the upcoming biennium. Highway contracts through the DOT are expected to be \$242.1 million, \$242.9 million, and \$252.0 million in fiscal 2009 through fiscal 2011, respectively. While annual growth for "other" contracts has been approximately 1.0 percent historically, growth in other public contracts is expected to decline, -6.5 percent annually, for the estimated period and is expected to average \$338.4 million through the three year period. Next, the annual contract amounts are summed. Finally, the tax rate is applied to the amount of total contracts to determine the gross collections of the PCGRT.

#### Adjustments

The final step in estimating the PCGRT is to reduce the gross collections by two adjustments, income tax credits and property tax refunds. According to the DOR, the backlog in processing has been eliminated, and net collections should appear more consistent in the future. Consequently, growth of the refund and credit activity should become more stable. Total credits are expected to average \$817,000 each fiscal year from 2009 through 2011. Property tax refunds are estimated by developing a relationship between total business property taxes paid and the contractor refunds. This technique produces estimates of property tax refunds that amount to \$743.356, \$791,711, and \$798,095 for fiscal years 2009 through 2011, respectively.

# Revenue Estimate Profile

# **Railroad Car Tax**

Revenue Description: All railroad property is subject to taxation as defined in the federal Railroad Revitalization and Regulatory Reform Act of 1976. The Railroad car tax applies to the rolling stock owned by railroad companies. The railroad car tax rate the average property tax rate for commercial and industrial property. Railroad car companies, which operate in several states, pay taxes on the portion of the property value allocated to Montana, based on the ratio of the car miles traveled within Montana to the total number of car miles traveled in all states, as well as time spent in the state relative to time spent in other states.

# **Statutory Reference:**

Tax Rate (MCA) - 15-23-214(1)

Tax Distribution (MCA) - 15-23-215

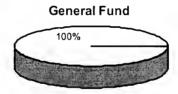

Date Due – Report due to the Department of Revenue April 15<sup>th</sup> of each year for the previous calendar year (15-23-103(2), 15-23-212). The department calculates the tax due by the third Monday in October (15-23-214(1)). One-half of the tax is due by November 30<sup>th</sup> and one-half is due by May 31<sup>st</sup> (15-23-214(3), 15-16-102(1)).

**Applicable Tax Rate(s):** The tax rate is equal to the previous year's average statewide tax rate for commercial and industrial property. This is multiplied by the statewide average mill levy for commercial and industrial property. The most current tax year rates are:

- \* 2004 3.88%
- \* 2007 3.55%
- \* 2005 3.81%
- \* 2008 3.52%
- \* 2006 3.74%

**Distribution:** All revenue from this tax is deposited into the general fund.

### **Revenue Estimate Methodology:**

#### Data

Data from the Department of Revenue (DOR) are used to estimate railcar tax collections. Additionally, SABHRS data are used to check the estimates against the historic values. DOR provides data on the value of national railroad car fleet, Montana's rolling stock, and railroad car tax assessed by company. DOR also provides the historic observations of the average mill levy and applicable tax rate.

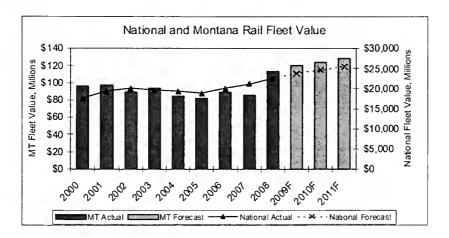

Revenue Estimate Profile

# **Railroad Car Tax**

#### **Analysis**

Although the railcar tax appears quite volatile, most of the volatility is caused by shifts in average mill levies and tax rates, both of which are controlled in large part by factors outside of the growth in rail shipments. Furthermore, a large part of the volatility can be traced to litigation brought by rail companies and settled in federal legislation. In 1993, some rail companies protested tax rates. Tax payments were reduced for four years. Then, in 1997, the litigation was settled and the companies were required to make both past and current payments. Railroad properties are taxed as class 12 properties. To calculate total railroad car tax collections (class 12 property), the market value of the Montana fleet is multiplied by the average mill levy and tax rate.

The estimate of the railroad car tax is based on the market value of the rail fleet in Montana. Before the market value can be ascertained, some preliminary estimates must be developed. As illustrated in the figure below, the market value of Montana's fleet is based on a relationship with market value of the U.S. fleet. Consequently, an estimate for the value of the national fleet is developed using the average rate of growth in the U.S. fleet value, based on a four-year pattern of growth. That rate is then applied to the last year of actual fleet value available. Next, a measure of the apportionment of Montana fleet value is developed in percent terms. The apportionment is then applied to the estimate for the national fleet market value to determine the Montana railroad fleet market value. Since the mid 1990's, the market value of Montana's rail fleet has been about 0.50 percent of the nation's fleet. However in recent years, Montana's proportion of rail fleet market value has diminished slightly. For the purpose of estimating future railroad car tax collections, the most recent ratio of Montana market fleet value to national fleet value is used, 0.50 percent. This process provides estimates for the market value of Montana rolling stock of approximately \$124.3 million in fiscal 2009 through fiscal 2011.

After the Montana market fleet value is determined, the average commercial and industrial mill levy and tax rate must be calculated. The rate of the mill levy is calculated from the average of statewide commercial and industrial mill levies. The average mill levy is expected to increase because counties are able to raise levies at a rate equal to half of the annual rate of inflation. Furthermore, the increasing costs of school budgets will further force the average mill levy to increase. The calculated mill levy estimates are 0.524 percent in fiscal 2009, 0.542 percent in fiscal 2010, and 0.539 percent in fiscal 2011.

The tax rate for the railroad property is created from a weighted average of five property classes: class 4, 7, 8, 9, and 13. Class 4 property tax, which is the residential and commercial property tax, is weighted more heavily than the other classes. The estimated tax rate will be 3.4 percent through the years analyzed.

Finally, the rail car tax estimates are completed by multiplying the Montana market value by the average mills and the tax rate.

Revenue Estimate Profile

### **Rental Car Sales Tax**

Revenue Description: Beginning July 1, 2003, a new four percent sales tax is imposed on the base rental charge for rental vehicles. The base rental charge includes use charges for time and mileage, insurance, accessory equipment, and charges for additional or underage drivers. It does not include price discounts, charges for operating an airport concession, motor fuel, intercity drop charges, and government taxes. A rental vehicle is one that is used by a person other than the owner by arrangement and for consideration. Included are light vehicles, motorcycles, motor-driven cycles, quadricycles, motorboats and sailboats, and off-highway vehicles. Sales to the U.S. government are exempt from the sales tax. All facilities subject to the tax must obtain a seller's permit before engaging in business subject to the sales tax within Montana. The Department of Revenue may require a retailer to post security up to twice the average tax liability to be used to recover taxes, interest, and penalties owed. Vendors are allowed to claim and keep five percent of the tax as an allowance, not to exceed \$1,000 a quarter.

### **Statutory Reference:**

Tax Rate (MCA) - 15-68-102(1b)

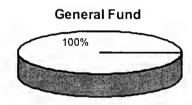

Tax Distribution MCA) - 15-68-820

Date Due - before the last day of the month following the calendar quarter (15-68-502(1))

Applicable Tax Rate(s): A four percent sales tax is imposed on the base rental charge for rental vehicles.

**Distribution:** All revenue from this tax is deposited into the general fund.

#### Distribution Chart:

Collection Frequency: The vendor must pay the tax due by the last day of the month following a calendar quarter.

### % of Total General Fund Revenue:

FY 2004 - 0.18% FY 2007 - 0.16% FY 2005 - 0.17% FY 2008 - 0.16%

FY 2006 - 0.16%

### **Revenue Estimate Methodology:**

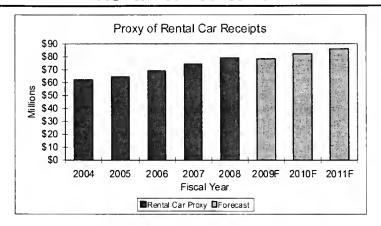

#### <u>Data</u>

The estimate of the rental car sales tax requires data from two sources, the state accounting system (SABHRS) and the Institute for Tourism and Recreation Research (ITRR). The SABHRS data includes the historic tax collection observations and the ITRR data is used as an indicator for the historic growth associated with the tourism industry.

Before analysis can begin on the rental car tax, a proxy value for rental car expenditures must be developed. This calculation is made by dividing historic tax receipts, provided through SABHRS, by the current tax rate.

Revenue Estimate Profile

# **Rental Car Sales Tax**

#### Analysis

Because the rental car sales tax is a new tax with only five collection observations, neither a trend nor a regression model provides acceptable results for estimating future tax collections. Because there is strong connection between the use of lodging facilities and rental cars, and given the apparent correlation between the taxes, the LFD uses the growth rate of the lodging facilities tax to project future rental car receipts.

The lodging facilities tax is projected with a linear trend model of the proxy of taxable room charges. The statistics of fit show that a linear trend accurately measures the rate of growth in the value of the proxy of taxable lodging receipts in Montana. The model produces an R<sup>2</sup> rating of 0.993. This means that the linear trend explains 99.3 percent of the variability of the taxable lodging receipts, when all other impacts are held constant.\* The growth rate is then applied to the most recent base (fiscal 2008) of the proxy of rental car receipts.

### Adjustment and Distribution

The final step in development of the rental car sales tax projection is to reduce the projection by credits and audits. Credits may be requested by vendors for tax payments on dollars that are later recognized as bad debt. Additionally, a credit is allowed if a similar tax has been levied and paid in another state on property that was leased outside this state but used in the state. Additionally, the DOR may audit the accounts of vendors who pay the rental car sales tax, and both positive and negative adjustments may be made to the total collections. To date, no credits or audits have occurred.

\*For additional information concerning the statistics of fit for the model used for this projection, contact the Legislative Fiscal Division.

# Revenue Estimate Profile

# **Telecommunications Excise Tax**

**Revenue Description:** The retail telecommunications excise tax is levied on the sales price of retail telecommunications services originating or terminating in the state. It is paid by the retail purchaser and collected by the provider.

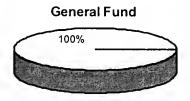

### **Statutory Reference:**

Tax Rate (MCA) - 15-53-130Tax Distribution (MCA) - 15-53-156Date Due -60 days after the end of the calendar quarter (15-53-139)

**Applicable Tax Rate(s):** The current tax rate of 3.75% is applied to the sales price of retail telecommunications services. Sales price includes payment for services such as distribution, supply, transmission, and delivery, but excludes federal taxes, relocation of service, equipment repair, prepaid calling cards, and other items. Gross receipts from the provision of internet services are also exempt. Credits previously allowed for costs of advanced telecommunications infrastructure improvements were repealed in House Bill 96 by the 2003 legislature.

Distribution: After retaining an allowance for refunds, all proceeds are deposited into the general fund.

#### **Distribution Chart:**

Collection Frequency: Quarterly

### % of Total General Fund Revenue:

FY 2004 - 1.51% FY 2007 - 1.14% FY 2005 - 1.38% FY 2008 - 1.15% FY 2006 - 1.24%

### Revenue Estimate Methodology:

#### Data

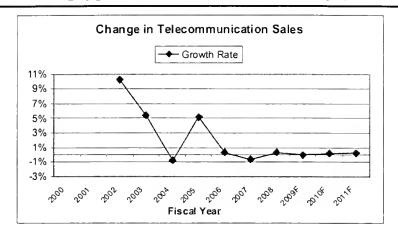

Data from quarterly reports produced by DOR provide a history of retail telecommunications sales for each individual company. CPI data is obtained from Global Insight.

#### Analysis

The total retail telecommunication sales are reported by the DOR. The ratio of the growth rate in sales from the previous fiscal year to the CPI rate as report by Global Insight for that year is multiplied by the CPI rate for the current year. The resulting growth rate is applied to the sales of the previous year. Yearly estimated taxable sales are multiplied by the tax rate to derive gross tax revenue from this source.

Revenue Estimate Profile

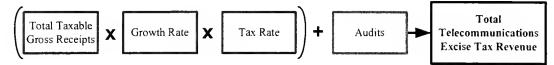

# **Telecommunications Excise Tax**

### Adjustments and Distribution

Once gross tax revenue for each fiscal year is determined, the value is adjusted by audits. In the 2001 biennium, audits are expected to total \$1.65 million and the revenue will appear in each of the years of analysis. Next, the applicable distribution percentage, 100 percent to the general fund, is applied.

# Revenue Estimate Profile

### **Vehicle Tax**

**Revenue Description:** Light vehicles, motorcycles and quadricycles, snowmobiles, buses, trucks, truck tractors having a manufacturer's rated capacity of more than 1 ton, motor homes, and certain trailers and travel trailers are taxed under a fee schedule that varies by age and weight.

Before January 1, 2001 light vehicles were taxed on an ad valorem basis. As a result of Referendum (LR) 115 (HB540), passed by the electorate in November 2000, light vehicles pay a fee-in-lieu of tax (FILT). The fee is \$195 for light vehicles of age between zero and four years, \$65 for vehicles between five and ten years of age, and \$6 for vehicles over ten years old. Owners of vehicles greater than ten years old may pay \$87.50 (plus other applicable fees) for a permanent registration.

Effective January 1, 2003, the fee schedule on heavy trucks is reduced by 1/6<sup>th</sup> for calendar 2003, by 1/3<sup>rd</sup> for calendar 2004 and by ½ for calendar 2005. These changes were enacted by HB 247 in the 2003 legislative session. The fee schedule for truck varies by age and weight capacity.

Effective January 1, 2004, the fees-in-lieu-of-tax on motorcycles and quadricycles, trailers and travel trailers, snowmobiles, watercraft, off-highway vehicles are one-time payments, except upon change of ownership. These one-time fees in calendar 2004 doubled in calendar 2005 and thereafter.

Due to changes enacted by HB 671 and SB 285 in the 2005 legislature, registration fee revenue reported by counties on the county collection report are now being recorded as vehicle taxes. Therefore, revenue shown for this source shows a large increase in FY 2006 from FY 2005, but revenue decreases by a like amount in the "Motor Vehicle Fee" revenue source.

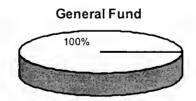

### **Statutory Reference:**

- Tax Rate (MCA) watercraft one-time (23-2-516), snowmobiles one-time (23-2-626), OHV one-time (23-2-803), vehicle registrations (61-3-321), vehicles greater than 1 ton (61-3-529)
- Tax Distribution (MCA) watercraft (23-2-518), snowmobiles (23-2-619(7)), OHV (23-2-803), vehicle registrations (61-3-321(16)), motorcycles and quadricycles registrations (61-3-509), motor homes registrations (61-3-509), vehicles greater than 1 ton registrations (61-3-509)
- Date Due County treasurers remit the revenue to the Department of Revenue every 30 days (15-1-504 & 61-3-509).

Applicable Tax Rate(s): Varies

FY 2006 - 5.39%

Revenue Estimate Profile

### **Vehicle Tax**

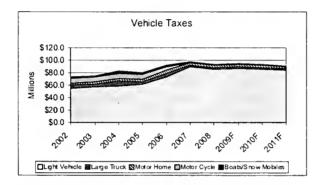

### Revenue Estimate Methodology:

#### Data

The data used to estimate the motor vehicle tax are obtained from the state accounting system (SABHRS) and Global Insight (both national and state projections). No adjustments are required on the raw data in preparation for analysis.

#### Analysis

Vehicle taxes are currently imposed at different rates on five categories of vehicles (tax schedule varies by age and weight) including light vehicles, large trucks, motor homes, motor cycles (including tri-cycles), and boats and snowmobiles. As shown in the figure below, the taxes have increased at a slow rate since fiscal 2002. The figure below also shows greater rate of growth for light vehicle taxes in fiscal 2006 and fiscal 2007. This growth results from the legislative impacts of SB 285 and HB 671, both implemented in the 2005 session. In fiscal 2008, vehicle taxes began to show a decline, which is expected to continue through fiscal 2010.

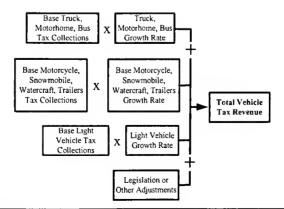

With constant tax rates, the future change in vehicle tax revenue results from change in the vehicle stock in Montana. Because tax payments are directly connected to the number of vehicles in the state, estimates for the revenues are made by applying estimated growth rates to the pervious year revenue. Growth rates for the stock of Montana vehicles are derived by first obtaining Global Insight estimates for the national vehicle stock and new car sales nationwide and for Montana. A ratio is then developed to project the stock of Montana vehicles. An average of the Montana stock in the current and previous years is used in this estimate from which growth between two years is calculated. For the estimated period, growth is expected to increase in FY 2009, but decline in the following years. The growth rate is applied to the base year (fiscal 2008) revenues of each tax category and projected forward at the same rate for all estimated fiscal years. The estimated tax collections of each category are then combined to create the total estimates for vehicle tax revenue.

#### Adjustments

In past years, adjustments to vehicle taxes have been required as a result of legislative actions. For these estimates, no adjustments are required.

### **Coal Severance Tax**

Revenue Description: For large producers, the coal severance tax is imposed on all coal production in excess of 20,000 tons per company per calendar year. However, producers of 50,000 tons or less in any calendar year are exempt from the tax.

### **Statutory Reference:**

Tax Rate (MCA) - 15-35-103

Tax Distribution (MCA) – Montana Constitution, Article IX, Section 5; 15-35-108

Date Due – the report to the Department of Revenue and tax is due 30 days following the close of the quarter (15-35-104)

### Applicable Tax Rate(s):

10.0% - on the value of surfaced mined coal with a heating quality < 7,000 BTU

15.0% - on the value surfaced mined coal with a heating quality ≥ 7,000 BTU 3.0% - on the value underground mined coal with a heating quality < 7,000 BTU

4.0% - on the value underground mined coal with a heating quality  $\geq 7,000$  BTU

# Revenue Estimate Profile

### **Coal Severance Tax**

**Collection Frequency:** Quarterly: The coal severance tax is due 30 days after the end of the quarter.

#### % of Total General Fund Revenue:

FY 2004 - 0.63% FY 2007 - 0.59% FY 2005 - 0.67% FY 2008 - 0.61%

FY 2006 - 0.56%

### Revenue Estimate Methodology:

The coal severance tax is applied to the value of coal produced. The coal severance tax estimate is developed by estimating the annual contract sales price and production for each producing coal company and any company anticipated to be producing within the 3-year period in question. From these estimates, taxable value can be determined to which is applied the tax rate. Since all production and price information is reported on a calendar year basis, the resulting calendar year estimates are converted into fiscal year estimates.

#### Data

Major coal companies are surveyed for anticipated production levels and general indications of coal prices. In addition, a review is performed of historical trends and current literature on coal prices. Data from quarterly reports produced by DOR provide a history of production and prices for individual coal companies. These companies are:

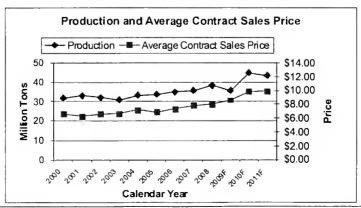

Decker Coal Company Spring Creek Coal Company Western Energy Company Westmoreland Savage Corporation Signal Peak (Bull Mountain)

### Analysis

The taxable value of coal is determined in a three-step process:

- 1. The future coal production for each company, as reported on the survey, is reduced by the exempt amount of 20,000 tons to get taxable tons.
- 2. To determine the future price for each company's coal, the company's average contract sales price for the last year increased by 2.0 percent. The average contract sales price for all companies is shown in the figure below.
- The estimated production and price for each company are multiplied together and the product for all companies summed to obtain the total taxable value.

The taxable value is multiplied by the applicable tax rate (4, 10 or 15 percent) to determine total coal severance tax revenue. At this point the total represents estimates for <u>calendar</u> years. To convert the estimates to a <u>fiscal</u> year basis, half the previous calendar year's estimate is added to the half of the current calendar year's estimate.

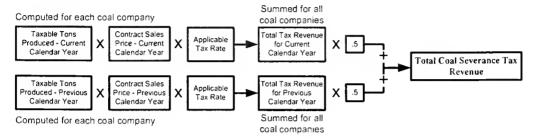

Revenue Estimate Profile

### **Coal Severance Tax**

### Adjustments and Distribution

Once total tax revenue for each fiscal year is determined, the applicable distribution percentages are applied.

### Forecast Methodology:

Revenue Estimate Profile

### **Coal Severance Tax**

# **Revenue Projection:**

Data Source(s): SABHRS, Department of Revenue Coal Tax Returns

**Contacts:** Coal Companies' Financial Personnel

Revenue Estimate Profile

# **Electrical Energy Tax**

**Revenue Description:** The electrical energy license tax is imposed on each person or organization engaged in generating, manufacturing, or producing electrical energy in Montana. This tax is in addition to the wholesale energy transaction tax enacted by the 1999 legislature (HB 174).

### **Statutory Reference:**

Tax Rate MCA) - 15-51-101

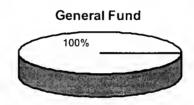

Tax Distribution (MCA) -17-2-124(2), 15-51-103

Date Due -30 days after the calendar quarter (15-51-101, 15-51-102)

**Applicable Tax Rate(s):** The tax of \$0.0002 per kilowatt-hour (or \$0.20 per megawatt-hour) is levied against all electrical energy produced within the state. A deduction is allowed for "actual and necessary" energy use by the plant for the production of the energy.

**Distribution:** All proceeds are deposited into the general fund.

### **Distribution Chart:**

**Collection Frequency:** Quarterly: The electrical energy tax is due 30 days after the end of the quarter.

### % of Total General Fund Revenue:

FY 2004 – 0.34% FY 2007 – 0.25% FY 2005 – 0.27% FY 2008 – 0.26%

FY 2006 - 0.27%

# Revenue Estimate Methodology:

The electrical energy tax is applied to the number of kilowatt hours of electricity produced. The estimate for the tax revenue is derived by estimating the annual taxable kilowatt hours produced by each company and any company anticipated to be producing within the 3-year period in question. From these production estimates, the tax rate is applied.

#### Data

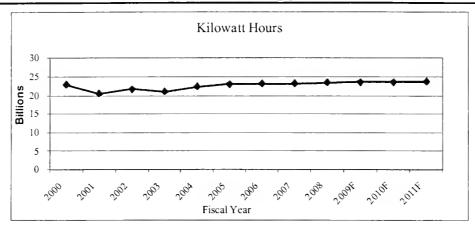

All electrical energy producing companies are surveyed for anticipated kilowatt hours produced, anticipated new production, and anticipated downtime or reduced production. Results of the survey were incomplete and were not used in the estimate. Data from quarterly reports produced by DOR provide a history of kilowatt hours produced for each individual company.

#### **Analysis**

FY 2008 known production in kilowatt hours and all subsequent years are multiplied by a growth factor derived by calculating the square root of the growth between FY 2005 and FY 2007. Taxable kilowatt hours are then multiplied by the tax rate to derive total revenue from this source.

Revenue Estimate Profile

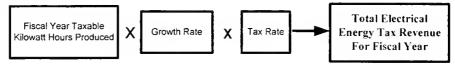

# **Electrical Energy Tax**

### Adjustments and Distribution

Once total tax revenue for each fiscal year is determined, the applicable distribution percentage, 100 percent to the general fund, is applied.

Revenue Estimate Profile

# **Federal Forest Receipts**

**Revenue Description:** The federal government authorizes logging operations on forest lands located within the borders of Montana. The sale of timber generates revenue that the federal government shares with the state in the following year. The state sends the money to the county treasurer of the county in which the receipts were generated. Within thirty days, the county treasurer distributes the money to various county and state accounts.

The previous formula for distributing federal forest payments terminated in FY 2008. In the federal Emergency Economic Stabilization Act of 2008 (the Bailout Bill), a new formula for the distribution of forest receipts was enacted. The new formula for FY 2009 through FY 2012 considers acres of federal land within an eligible county, the average three highest 25-percent payments made to each eligible state for each eligible county under the previous formula, and an income adjustment based on the per capita personal income for each county. As before, not more than 20 percent but at least 15 percent must be used by county governments for projects on federal lands. The remainder is distributed as below.

### **Statutory Reference:**

Tax Rate - NA

Tax Distribution MCA) – 17-3-211, 17-3-212

Date Due – the state treasurer distributes the funds within 30 days after receiving full payment

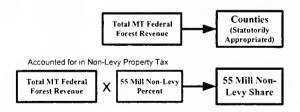

### Applicable Tax Rate(s): N/A

**Distribution:** The county treasurer apportions federal forest receipts in the following manner:

- 66 2/3% to the general fund of the county
- 33 1/3% to the following county wide accounts, based on the mill ratios of each to total mills in the current year:
  - o the county equalization accounts (55 mills)
  - o the county transportation account
  - o the county retirement accounts

This revenue source represents one component used to calculate total non-levy property tax revenue.

#### Distribution Chart:

Collection Frequency: Twice annually (usually October and December).

% of Total General Fund Revenue: Non levy is included in "Property Tax: 55 mills".

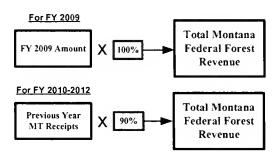

Revenue Estimate Methodology: A number of analytical techniques are used to develop relevant assumptions for this source of revenue. Historical data trends, economic conditions, input from industry experts, company surveys, etc., are examples of information used to formulate these assumptions. The techniques used to develop these assumptions may vary from biennium to biennium and are highly dependent on availability of information, professional intuition/judgment, and a detailed analysis of the revenue source. The applicable assumptions used to develop the revenue estimate for this source are provided in the "Revenue Estimate Assumptions" section of this document. The following summarizes the process used to develop the revenue estimate.

Revenue Estimate Profile

# **Federal Forest Receipts**

With the passage of the federal Emergency Economic Stabilization Act of 2008 (the Bailout Bill), the amount available to each county for FY 2009 is known and declines ten percent per year until FY 2012, after which the act sunsets. The general fund share will vary because of this and as a result of changes in the 55 mill share as a percent of the total countywide school mills.

Revenue Estimate Profile

# **Metalliferous Mines Tax**

**Revenue Description:** The metalliferous mines license tax is imposed on the production of metals, gems or stones in the state. The tax rate is applied to the gross value of the product, which is defined as the market value of the commodity multiplied by the quantity produced. Senate Bill 30, enacted in the August 2002 special legislative session, revised the payment of taxes from once to twice a year. The first \$250,000 of value is exempt from taxation. A company taxed at both rates can claim both exemptions.

### **Statutory Reference:**

Tax Rate (MCA) - 15-37-103

Tax Distribution (MCA) -15-37-117, 17-2-124(2)

Date Due – August 15<sup>th</sup> for period January through June, March 31<sup>st</sup> for period July through December (15-37-105)

# Applicable Tax Rate(s): The tax rate for a 6-month period is as follows:

Gross value is defined as monetary amounts or refined metal received for the products less:

- 1. Basic treatment and refinery charges
- 2. Transportation costs from the mine to a mill or other processor
- 3. Quantity and price deductions
- 4. Interest
- 5. Penalty metal, impurity and moisture deductions

For concentrates shipped to a sn	nelter, mill, or	For gold, silver, or any platinum group metal that is dore*,			
reduction work:		bullion, or matte* and that is shipped to a refinery:			
Gross Value	Rate	Gross Value	Rate		
\$0-\$250,000	Exempt	\$0-\$250,000	Exempt		
\$250,001 and Above	1.81%	\$250,001 and Above	1.6%		
		* Dore: A mixture of gold and silver in cast ba	ars		
		Matte: A crude mixture of sulfides formed in	n smelting sulfide ores of		
		metals			

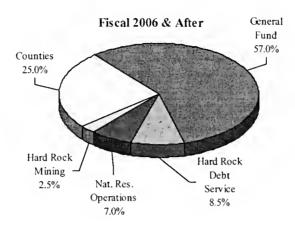

**Distribution:** The distribution of the metal mines tax has been altered several times since the 1990s. Prior to the 2005 legislature, the most recent change had been enacted by the 2001 legislature in Senate Bill 484 (effective July 1, 2002) that created a hard-rock mining reclamation debt service fund to pay debt service on the \$8.0 million of bonds authorized for state costs related to hard-rock mining reclamation, operation, and maintenance. The 8.5 percent allocation of metalliferous mines tax revenue previously allocated to the orphan share account was allocated to the hard-rock mining reclamation debt service fund. The 2005 legislature increased the allocation to counties from 24 percent to 25 percent and decreased the general fund allocation from 58 percent to 57 percent. The table below shows recent historical distributions of the tax revenue.

	Fiscal	Fiscal	Fiscal	Fiscal	Fiscal	Fiscal
	1994-1995	1996-1997	1998-2002	2003	2004-2005	2006&Beyond

Revenue Estimate Profile

# **Metalliferous Mines Tax**

### Distribution Chart:

Collection Frequency: Biannually

#### % of Total General Fund Revenue:

FY 2004 – 0.23% FY 2007 – 0.49% FY 2005 – 0.34% FY 2008 – 0.55%

FY 2006 - 0.41%

### **Revenue Estimate Methodology:**

The metalliferous mines tax is applied to the taxable gross value of production. The metalliferous mines tax estimate is developed by estimating the annual sales price for each type of metal produced and the anticipated production quantity of each metal by company. From these estimates, taxable gross value can be determined to which an effective tax rate is applied. Since all production and price information is reported on a calendar year basis, the resulting calendar year estimates are converted into fiscal year estimates.

#### Data

Mining companies are surveyed for anticipated production levels, general indications of applicable metal prices, and any possible changes in production due to expansion or contraction. Historical and future prices are obtained from various sources depending on the metal. Common sources include COMEX, NYMEX, and KITCO. In addition, a review is performed of historical trends, current literature on metals and metal prices, and companies' 10-Q reports. Data from biannual reports produced by DOR provide a history of production and prices by commodity and taxable gross value for each mining company. These companies are:

\* Golden Sunlight Mines

\* Montana Resources

\* Stillwater Mining

\* Holcim US

\* Montana Tunnels

\* Genesis

#### Analysis

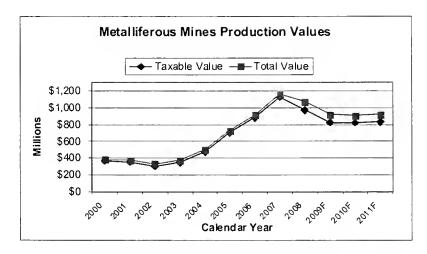

The taxable value of metals is determined in a four-step process:

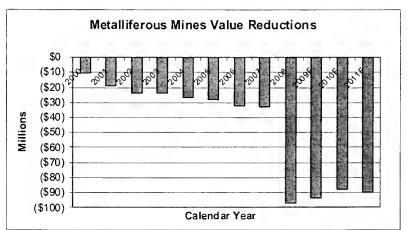

- As reported on the survey, future metals production for each company is summed by commodity. Amounts may be adjusted to fit with historical trends or if major changes are expected from historical production.
- To determine the future price for each metal, different techniques are used depending on the commodity and the reasonableness of future prices based on research of the literature and directions of future markets.
  - Copper, gold, silver, palladium, platinum the price reported from the most recent half-year report is increased by the percentage growth for that year as shown on the futures market.
  - Lead, zinc, rhodium, molybdenum, nickel the price for the last known calendar year is used for all future years.

Revenue Estimate Profile

# **Metalliferous Mines Tax**

- The estimated production amount for each metal for all companies is summed and multiplied by the estimated price for that metal. This is done for each metal and the products summed to yield a total gross value.
- Total <u>taxable</u> value is obtained by reducing the total <u>gross</u> value by: a) the tax exempt amount of \$250,000/year for each company; and b) allowable treatment, refinery, transportation, and other costs.

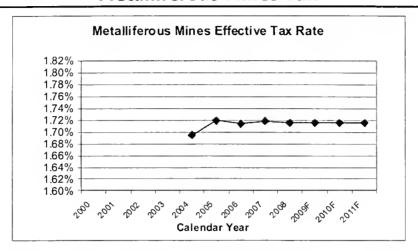

Taxable value is multiplied by an effective tax rate. Since a company's taxable value could be subject to two tax rates - 1.81 percent for concentrates shipped to a smelter, mill or reduction work and 1.6 percent for dore, bullion, or matte that is shipped to a refinery - an effective tax rate is used to capture both these rates. The effective tax rate for FY 2008 was rounded and used for the estimate. The rate is consistent with previous years. The estimate is obtained by multiplying the total taxable value by the effective tax rate.

Revenue Estimate Profile

### **Metalliferous Mines Tax**

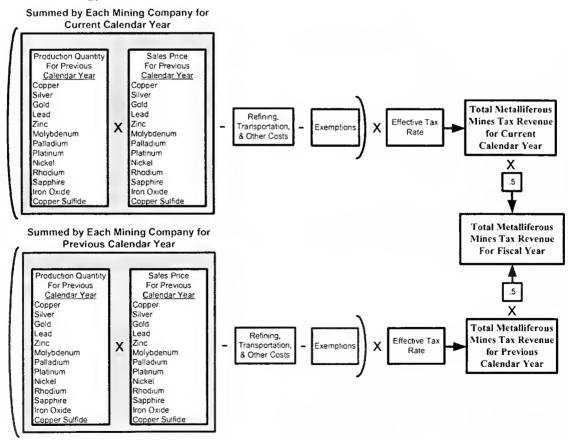

At this point the total represents estimates for <u>calendar</u> years. To convert the estimates to a <u>fiscal</u> year basis, half the previous calendar year's estimate is added to the half of the current calendar year's estimate.

### Adjustments and Distribution

Once total tax revenue for each fiscal year is determined, the applicable distribution percentages are applied.

Revenue Estimate Profile

### Oil and Natural Gas Production Tax

**Revenue Description:** The oil and natural gas production tax is imposed on the production of petroleum and natural gas in the state. Gross taxable value of oil and natural gas production is based on the type of well and type of production. A portion of the revenue from the tax may returned to Indian tribes per agreements between the Department of Revenue and the tribes.

#### **Statutory Reference:**

Tax Rate (MCA) – 15-36-304. Privilege and license tax – 82-11-131, Administrative Rules 36.72.1242 Tax Distribution (MCA) – 15-36-331(4), 15-36-332(2&3) (to taxing units)

Date Due – within 60 days after the end of the calendar quarter (15-36-311(1))

Applicable Tax Rate(s): The oil and natural gas production tax has numerous tax rates depending on several factors. These factors include whether the oil or gas is produced from a stripper well, a stripper incentive well, from a well initially drilled before 1999 or after, from a well newly drilled within the last year or 18 months, and whether the interest being taxed is the working interest or the royalty interest. The Board of Oil and Gas Conservation imposes an additional privilege and license (P & L) tax on all oil and natural gas tax rates. Starting October 2006 as set by the Board, the P&L tax rate is 0.09 percent. Based on this rate, HB 758 enacted by the 2005 legislature allows an additional tax rate of 0.17 percent to generate revenue for local impacts for local governments. The two taxes may not exceed 0.3 percent. The following table shows tax rate percentages for each type of pre-1999 oil and post-1999 oil, excluding the P & L tax and the new Local Impact tax. The quarterly tax rates on stripper production and on incremental production are lower than that for regular production unless the price of West Texas Intermediate averages above \$30 for the quarter. Similarly, the quarterly tax rate for stripper well exemption production (1-3 barrels a day) is lower than that for regular production unless the price of West Texas Intermediate averages above \$38 for the quarter.

Oil Tax Rates	
15-36-304(5), MCA	
Working Interest	
Primary recovery production	
First 12 months of qualifying production	0.5%
After 12 months:	
pre-1999 wells	12.5%
post-1999 wells	9.0%
Stripper oil production (>3 and < 15 barrels/day if oil<\$30)	
1 through 10 barrels a day production	5.5%
>10 through 14 barrels a day production	9.0%
Stripper oil production (>3 and < 15 barrels/day if oil>=\$30)	•
Stripper wells (3 barrels or less/day)	
Stripper well exemption production (if oil <\$38)	0.5%
Stripper well bonus production (if ail >=\$38)	6.0%
Horizontally completed well production	
First 18 months of qualifying production	0.5%
After 18 months	
pre-1999 wells	12.5%
post-1999 wells	9.0%
Incremental production (if oil <\$30/barrel)	
New or expanded secondary recovery production	8.5%
New or expanded tertiary production	5.8%
Incremental production (if oil >=\$30/barrel)	
Pre-1999 wells	12.5%
Post-1999 wells	9.0%
Horizontally recompleted well	
First 18 months	5.5%
After 18 months	
pre-1999 wells	12.5%
post-1999 wells	9.0%
Nonworking Interest	14.8%
* No stripper tax rate. Taxed at primary recovery rates. See 15-36-	303(22a)

Revenue Estimate Profile

### **Oil and Natural Gas Production Tax**

Natural Gas Tax Rates 15-36-304(2), MCA	
Working Interest	
Qualified production	
First 12 months	0.5%
After 12 months	
pre-1999	14.8%
post-1999	9.0%
Stripper natural gas pre-1999 wells	11.0%
Horizontally completed well production	
First 18 months of qualifying production	0.5%
After 18 months	9.0%
Nonworking Interest	14.8%

**Distribution:** Once the oil and natural gas production taxes have been collected, the revenue is first distributed based on the amounts collected from the P & L and Local Impact taxes. The amounts from the P & L tax are distributed to the Board of Oil and Gas Conservation. The amounts from the Local Impact tax are distributed to the oil, gas, and coal natural resource state special revenue account. The amounts received by Board and the oil, gas, and coal natural resource account vary based on a sliding tax scale based on the P & L tax set by the Board. Counties producing oil and natural gas receive the next share of total revenue with each county having its own statutory distribution percentage of total revenue, including the revenue generated by the P & L and Local Impact taxes. A portion of the revenue may be returned to Indian tribes per agreements between the Department of Revenue and the tribes. The remainder of the revenue is distributed to other state accounts in the following manner:

#### Fiscal 2008 though Fiscal 2011

- Coal bed methane account 1.23%
- Natural resources projects account 1.45%
- Natural resources operations account 1.45%
- Orphan share account 2.99%
- University system 6 mill levy account 2.65%
- General fund the remainder (90.23%)

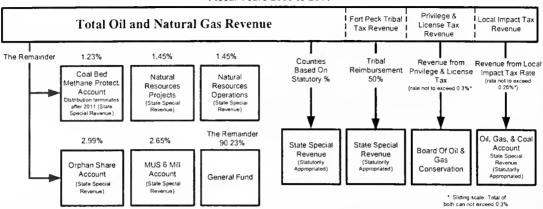

The distributions of county shares and the amount of oil and natural gas production tax revenue deposited in the oil, gas, and coal natural resource account are statutorily appropriated and are based on the statutorily set percentages for each county.

Revenue Estimate Profile

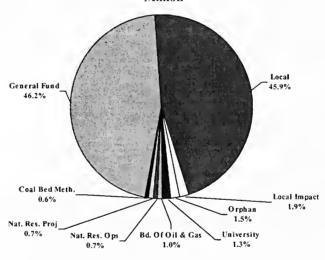

### Oil and Natural Gas Production Tax

#### Distribution Chart:

#### Fiscal Years 2008 to 2011

#### Oil & Natural Gas Production Tax Revenue Based on FY 2008 Actual Amounts of \$324.311 Million

Because the exact distribution of oil & natural gas revenue will vary depending on various factors, the chart only reflects fiscal 2008 actual distributions. Please see the table above for exact distribution percentages.

**Collection Frequency:** Quarterly: The oil and natural gas production tax is due 60 days after the end of the production quarter.

#### % of Total General Fund Revenue:

FY 2004 - 2.99%	FY 2007 - 5.25%
FY 2005 - 4.09%	FY 2008 - 7.64%
FY 2006 – 5.42%	

#### **Revenue Estimate Methodology:**

The estimate for oil and natural gas revenue is derived from estimating the price and specific production subject to varying tax rates from which value can be obtained. Specific statutory tax rates are used for the types of oil and natural gas that are taxed differently.

Revenue Estimate Profile

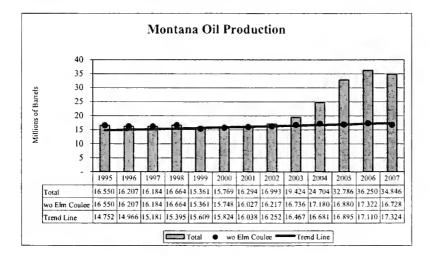

### Oil and Natural Gas Production Tax

#### Data

Data from the Board of Oil and Gas Conservation are used extensively to isolate monthly historical production of oil and natural gas by field and by individual well. Global Insight provides future estimates of West Texas Intermediate oil and national well head natural gas prices. Production, price, value, and revenue collections, by oil type, are provided on a quarterly basis by the Department of Revenue.

#### Oil Analysis

Production - The estimate is developed on a quarterly basis with production from the Elm Coulee field separate from all
other production. Analysis of the field data indicates that the majority of the increased production is from the relatively
new Elm Coulee field in Richland County. The importance of this one field can be seen in the figure below.

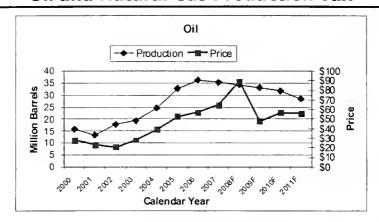

Industry personnel state that this field peaked October 2006. If so, fewer new wells will be spudded (drilling initiated). Existing wells will then follow a production decline curve unique to the characteristics of the field. Fields tapped through horizontal drilling, such as Elm Coulee, tend to be depleted more rapidly than those tapped vertically. Future production from completed wells can be estimated by developing a normalized production decline curve from the producing wells. In doing so, the difficulty of having different starting time for each well can be eliminated by averaging each well's production from a common time point. The result is a curve that represents the average production of wells in the Elm Coulee field by month of production. Production from future wells can be estimated by applying the production curve coefficients to an estimate of future spudded wells. Knowing monthly production from each well and the date it was placed into production are essential for estimating oil tax revenue because tax rates vary based on the length of time a well has been in production. The dynamics in the timing of when wells enter and fall out of the various tax rates and the changes in production at the various stages is complex, but needs to be modeled to ensure accurate estimates.

Production from all other fields is also estimated on a quarterly basis and by the different taxation types. For each quarter, the estimate is derived by multiplying the same quarter of the previous year by the ratio of the results of a regression analysis for the same quarter of the current and the previous year. The results for each tax type are then summed and the quarterly results are summed by year.

 Price – The price for each quarter is estimated by adjusting the Global Insight West Texas Intermediate oil price for that quarter by the ratio of the previous three year average Montana price to the three year average of the Global Insight price.

Revenue Estimate Profile

### Oil and Natural Gas Production Tax

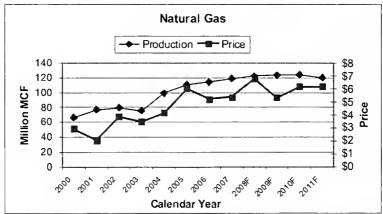

Once production and prices have been estimated, the value can be calculated by the product of the two. The quarterly value of each tax type is then multiplied by the applicable tax rate to obtain the estimate. The sum of the revenue from all tax types for each fiscal year determines the oil production revenue estimate.

#### Natural Gas Analysis

• Production - The natural gas industry in Montana has also been undergoing major changes. Improved techniques have allowed new fields to be developed and old fields to be more productive. Data from the Board of Oil and Gas Conservation indicate that the majority of increased production is from the same two fields that were the major contributors to the natural gas production tax in the 2009 biennium, but are now joined by other important contributing fields – St. Joe Road, Pennel, CX, Tiger Ridge, Bowdoin, and Cedar Creek. A normalized production curve is developed for each of these fields. As with oil, the development of a normalized production curve from individual wells eliminates the difficulty of having different starting time for each well by averaging each well's production from a common point in time. The result is a curve that represents the average production of wells in these by month of production. With the equations of these curves, future production can be estimated.

Production from all other fields is also estimated on a quarterly basis and by the different taxation types. For each quarter, the estimate is derived by multiplying the same quarter of the previous year by the ratio of the results of a regression analysis for the same quarter of the current and the previous year. The results for each tax type are then summed and the quarterly results are summed by year.

 Price – The price for each quarter is estimated by adjusting the Global Insight West Texas national well head price for that quarter by the ratio of the previous three year average Montana price to the three year average of the Global Insight price.

Revenue Estimate Profile

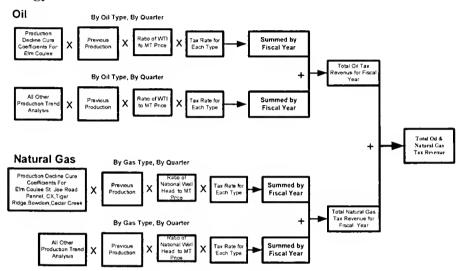

### Oil and Natural Gas Production Tax

Once production and prices have been estimated, the value can be calculated by the product of the two. The quarterly value of each tax type is then multiplied by the applicable tax rate to obtain the revenue. The sum of the revenue from all tax types for each fiscal year determines the natural gas revenue estimate.

#### Adjustments and Distribution

Once the oil and natural gas estimates have been summed, the distribution formula is applied with the amounts to the Board of Oil and Gas and to local governments distributed first and the remainder subject to statutory percentages.

#### Forecast Methodology:

Revenue Estimate Profile

## **Resource Indemnity Tax**

Revenue Description: The state imposes a resource indemnity and ground water assessment (RIGWA) tax on the gross value of coal (based on the contract sales price), as well as most minerals, but not metals, oil, and natural gas. Prior to July 1, 2002 when the Governor by executive order certified to the Secretary of State that the resource indemnity trust balance had reached \$100 million, a portion of oil and natural gas taxes had been distributed under the same methodology as the RIGWA tax. Once the RIT balance reached \$100 million, this portion of oil and natural gas taxes no longer has a connection to the RIGWA tax. The RIGWA tax on all other production is specific to each resource as described below.

#### **Statutory Reference:**

Tax Rate (MCA) - 15-38-104

Tax Distribution (MCA) - 15-38-106

Date Due from metal producers – March 31st following the end of the calendar year (15-38-105, 15-38-106(1))

Date Due from mineral producers – 60 days following the end of the calendar year (15-38-105, 15-38-106(1))

#### **Applicable Tax Rate(s):** The applicable rates are as follows:

Coal: \$25 plus 0.4% of the gross value of coal produced in the preceding year in excess of \$6,250

Minerals: \$25 plus 0.5% of the gross value of minerals (excluding metals and excluding oil and natural gas because the

resource indemnity trust has reached \$100 million) produced in the preceding year in excess of \$5,000 Talc: \$25 plus 0.4% of the gross value of talc produced in the preceding year in excess of \$625

Tale: \$25 plus 0.4% of the gross value of tale produced in the preceding year in excess of \$625

<u>Vermiculite</u>: \$25 plus 2.0% of the gross value of vermiculite produced in the preceding year in excess of \$1,250 <u>Limestone</u>: \$25 plus 10.0% of the gross value of limestone produced in the preceding year in excess of \$250

Garnets: \$25 plus 1.0% of the gross value of garnets produced in the preceding year in excess of \$2,500

**Distribution:** Beginning fiscal 2004, the amount needed to cover debt service on CERCLA bonds (after amounts transferred from the CERCLA cost recovery account) is deposited to the CERCLA match debt service account. Beginning fiscal 2008, the remainder of RIGWA tax proceeds is distributed in the following order:

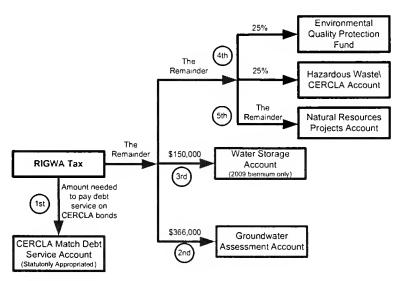

- 1. \$366,000 each year to the ground water assessment account
- 2. \$150,000 to the water storage account for the 2009 biennium only
- 3. 50.0% of the remainder split evenly between the environmental quality protection fund and the hazardous waster/CERCLA account
- 4. the remainder to the natural resources projects account

Revenue Estimate Profile

## **Resource Indemnity Tax**

Distribution Chart:

### **Beginning Fiscal 2008**

Collection Frequency: Annually - the tax is paid on or before March 31 of the year following the production year.

% of Total General Fund Revenue: N/A

### Revenue Estimate Methodology:

#### Data

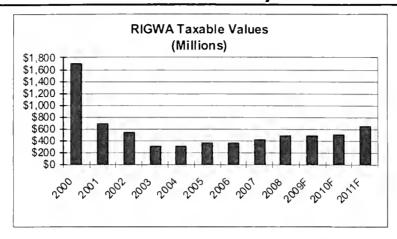

The data used to estimate the resource indemnity and groundwater assessment (RIGWA) tax are obtained from the coal severance tax source, the property tax source, and the state accounting system (SABHRS). No adjustments are required on the raw data in preparation for analysis.

#### **Analysis**

The RIGWA tax is imposed on the gross taxable value from the production of coal and miscellaneous mines. Before fiscal 2002, when Governor Martz certified that the resource indemnity trust had reached the required principal amount of \$100 million, oil and natural gas production was also taxed under RIGWA, but the oil and natural gas component of the tax ended when the trust reached the limit. The gross value estimates prepared for the coal severance tax and class 1 property tax (miscellaneous minerals) are used in the estimate for the RIGWA tax.

Revenue Estimate Profile

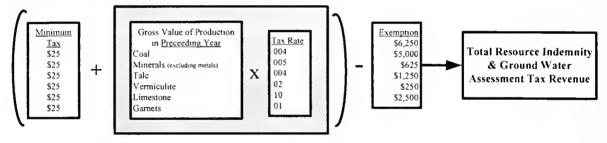

## **Resource Indemnity Tax**

The future taxable value of coal, produced by all mines, is estimated in the coal severance tax source. The estimate of coal value is \$364.7 million, \$506.7 million, and \$497.9 million in fiscal 2009 through fiscal 2011, respectively. The future taxable value of other mineral production is estimated at the FY 2008 amount.

To develop the estimates for RIGWA tax collections, the tax rates are applied to the production value of each of the components, coal and other minerals. The tax estimates for the two components are summed to produce the total estimate of the RIGWA tax.

Revenue Estimate Profile

## **US Mineral Royalty**

**Revenue Description:** Under the federal Mineral Lands Leasing Act (30 USC, Section 191), 50.0 percent of all sales, bonuses, royalties, and rentals received from federal lands in Montana must be paid to the state. However due to federal legislation, during the period of October 2007 through September 2008 state shares were 48.0 percent. Federal Mineral Management Services personnel state that the budget request for the current federal fiscal year continues the reduced rate and it is assumed the reduction will continue. The money is to be used as the legislature may direct, giving priority to those subdivisions of the state socially or economically impacted by development of minerals leased under the federal act. The revenue produced on federal public lands includes royalties and bonuses from oil, gas, coal, and other mineral exploration and extraction.

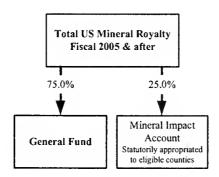

#### **Statutory Reference:**

Tax Rate – NA Distribution – 17-3-240, MCA

Applicable Tax Rate(s): N/A

**Distribution:** With the enactment of Senate Bill 212 by the 2005 legislature, receipts are deposited 75 percent to the general fund and 25 percent to the state special revenue mineral impact account. Money in the mineral impact account is statutorily appropriated for distribution to eligible counties in which the minerals were extracted.

#### Distribution Chart:

Collection Frequency: Monthly

#### % of Total General Fund Revenue:

FY 2004 – 2.08% FY 2007 – 1.54% FY 2005 – 1.78% FY 2008 – 1.85% FY 2006 – 1.72%

### **Revenue Estimate Methodology:**

The estimate for Montana's share of mineral royalties and other mineral related income from its federal lands is derived from estimating each of the major sources of revenue, applying the applicable royalty rate for each, and multiplying by Montana's share of the revenue.

#### Data

Data from which to base estimates for this revenues source have been sparse and incomplete. Up until October 2001, the Mineral Management Service of the U.S. Department of Interior had provided data used to make the estimate. However, lawsuits and court orders have stifled the flow of data since then. Only recently has yearly data been available for federal fiscal years through 2007. The current estimates rely on these data, future prices of oil and natural gas, and coal production on federal land obtained from a survey of Montana's coal companies.

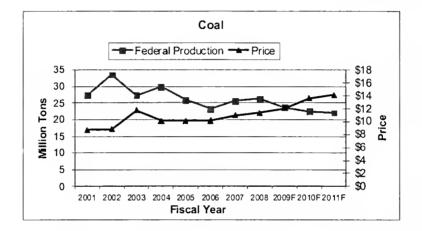

Revenue Estimate Profile

## **US Mineral Royalty**

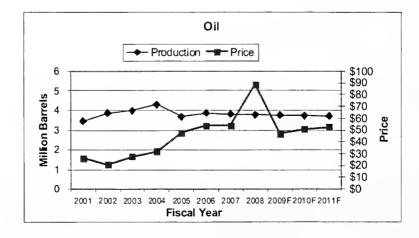

#### Analysis

The estimate is derived by first estimating the individual revenue components. The estimate for mineral royalties is obtained by multiplying together estimates for production, price, the applicable royalty rate, and Montana's percentage share.

• Coal – Calendar year production is estimated by multiplying the calendar year production reported by each company on the coal survey by the percent of production each anticipated to be from federal lands multiplied by a federal fiscal year conversion factor. Price is determined by calculating a federal fiscal year growth by converting the calendar year Montana contract sales price into a federal fiscal year price and determining the growth between the current and previous years. Production multiplied by price yields value. The value is then multiplied by the royalty rate for the last known federal fiscal year 2007. This royalty rate is used for all estimated years. Of the total calculated royalty, Montana receives a portion. Although the state portion is 50 percent (prior to the 2 percent reduction), actual receipts from calendar year 2007 indicate an actual rate of 49.6 percent. This rate is used for all estimated years.

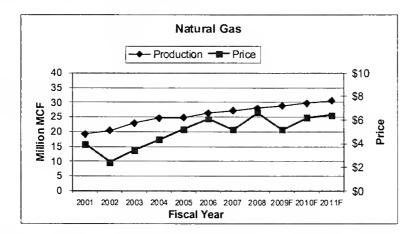

• Oil – Federal fiscal year production is estimated by multiplying the current years amount by the growth between it and the previous year. Yearly prices are determined by first averaging quarterly future prices of West Texas Intermediate oil as forecast by Global Insight, based on the federal fiscal year, for the current and previous year. Price for the current federal fiscal year is determined by multiplying current year's Global Insight price by the ratio of the previous year's estimated (or actual) price to Global Insight price for the previous year. Production multiplied by price yields value. The value is then multiplied by the royalty rate. The actual royalty rate for federal fiscal year 2007 is used for all estimated years. Of the total calculated royalty, Montana receives a portion. Although the state portion is 50 percent (prior to the 2 percent reduction), actual receipts from calendar year 2007 indicate an actual rate of 46.2 percent. This rate is used for all estimated years.

Revenue Estimate Profile

## **US Mineral Royalty**

• Natural Gas – Calendar year production is estimated by multiply the previous year's production by the growth rate of the two previous years. Yearly prices are determined by first averaging quarterly future prices of well head natural gas as forecast by Global Insight, based on the federal fiscal year, for the current and previous year. The current year price is then multiplied by the ratio of the previous year's price to the previous year's estimated (or actual) price. Production multiplied by price yields value. The value is then multiplied by the royalty rate. The actual royalty rate for federal fiscal year 2007 is used for all estimated years. Of the total calculated royalty, Montana receives a portion. Although the state portion is 50 percent (prior to the 2 percent reduction), actual receipts from calendar year 2007 indicate an actual rate of 47.3 percent. This rate is used for all estimated years.

- Natural Gas Liquid Federal fiscal year production is estimated by carrying the 2007 actual amounts into all of the estimated years. Yearly prices are determined by first averaging quarterly future prices of well head natural gas as forecast by Global Insight, based on the federal fiscal year, for the current and previous year. The current year price is then multiplied by the ratio of the previous year's price to the previous year's estimated (or actual) price. Production multiplied by price yields value. The value is then multiplied by the royalty rate. The actual royalty rate for federal fiscal year 2007 is used for all estimated years. Of the total calculated royalty, Montana receives a portion. Although the state portion is 50 percent (prior to the 2 percent reduction), actual receipts from calendar year 2007 indicate an actual rate of 49.8 percent. This rate is used for all estimated years.
- Methane Federal fiscal year production is estimated by carrying the 2007 actual amounts into all of the estimated years. Yearly prices are determined by first averaging quarterly future prices of national well head natural gas as forecast by Global Insight, based on the federal fiscal year, for the current and previous year. The current year price is then multiplied by the ratio of the previous year's price to the previous year's estimated (or actual) price. Production multiplied by price yields value. The value is then multiplied by the royalty rate. The actual royalty rate for federal fiscal year 2007 is used for all estimated years. Of the total calculated royalty, Montana receives a portion. Although the state portion is 50 percent (prior to the 2 percent reduction), actual receipts from calendar year 2007 indicate an actual rate of 36.3 percent. This rate is used for all estimated years.
- Other Royalty No other royalty is anticipated.
- Rents, Bonuses, and Other The amounts from actual federal fiscal year 2007 are used for all estimated years. To obtain Montana's share, these amounts are adjusted by the ratio of the last known Montana's amount to the last known total revenue.

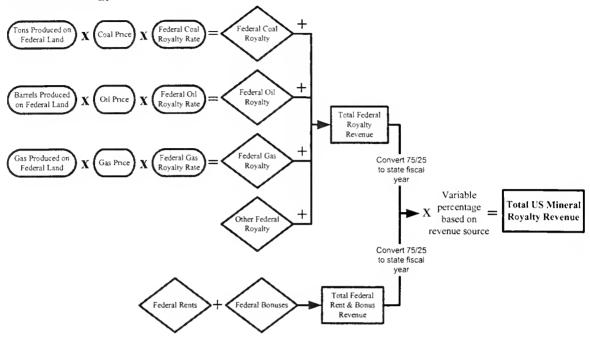

#### Adjustments and Distribution

Since the estimates are based on the federal fiscal year and on a distribution percentage of 50 percent, two adjustments are required: 1) to convert to a state fiscal year a 25/75 split is used; and 2) to capture the anticipated two percent reduction in distribution, the 50 percent distribution is backed out from the totals and replaced by 48 percent. The total amount of anticipated revenue is distributed 75 percent to the general fund and 25 percent to the state special revenue fund.

Tax Distribution (MCA) -15-72-106(3)

Date Due  $-30^{th}$  day of the month following the end of the calendar quarter (15-72-110)

**Applicable Tax Rate(s):** The tax rate of 0.015 cent is applied to the number of kilowatt hours transmitted (or \$0.15 per megawatt). If the electricity is produced in-state and sold out-of-state, the taxpayer is the person(s) owning the electrical generation property, and the tax is collected by the transmission services provider. If the electricity is produced in-state for delivery in-state, or is produced outside the state for delivery in-state, the taxpayer is the distribution services provider, and the tax is collected by the transmission services provider. The tax does not apply to: 1) electricity that is transmitted through the state that is neither produced nor consumed in the state; 2) electricity generated in the state by an agency of the federal government for delivery outside the state; 3) electricity delivered to a distribution services provider that is a municipal utility or a rural electric cooperative which opts out of competition under HB 390 (1997 legislature); 4) electricity delivered to a purchaser that received its power directly from a transmission or distribution facility owned by an entity of the US government; 5) electricity meeting certain contractual requirements that is delivered by a distribution services provider that was first served by a public utility after December 31, 1996; 6) electricity that has been subject to the transmission tax in another state; and 7) a 5 percent line loss exemption for transmission of electricity produced in the state for delivery outside of the state.

**Distribution:** All proceeds are deposited into the general fund.

#### Distribution Chart:

Collection Frequency: Quarterly

### % of Total General Fund Revenue:

FY 2004 – 0.24% FY 2007 – 0.20% FY 2005 – 0.22% FY 2008 – 0.20%

FY 2006 - 0.22%

### **Revenue Estimate Methodology:**

The wholesale energy transaction tax is applied to the number of kilowatt hours transmitted less five percent for line loss on out-of-state transmissions. The estimate for the tax revenue is derived by estimating the annual taxable kilowatt hours transmitted for each company and any company anticipated to be transmitting within the 3-year period in question. From these estimates, the tax rate is applied. Since all kilowatt hours transmitted is reported on a calendar year basis, the resulting calendar year estimates are converted into fiscal year estimates.

Revenue Estimate Profile

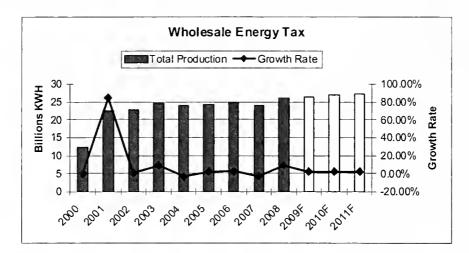

## **Wholesale Energy Tax**

#### Data

All energy transmitting companies are surveyed for anticipated kilowatt hours transmitted, anticipated new transmissions, anticipated downtime or reduced transmission, and a percentage split between in-state and out-of-state transmissions. Results of the survey were incomplete and were not used in the estimate. Data from quarterly reports produced by DOR provide a history of in-state and out-of-state kilowatt hours transmitted by each individual company.

#### **Analysis**

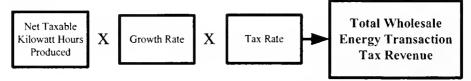

A number of different techniques can be used to develop the revenue estimate for this source. Choosing a technique depends on whether the technique passes the "reasonable" test. The technique based on historical data was used in this analysis. A growth rate based on total yearly production from FY 2001 to FY 2008 is applied to FY 2008 actual amounts for both in-state and out-of-state production. The totals are added for each year and allowable line loss is calculated and subtracted from the yearly total. Net taxable kilowatt hours are multiplied by the tax rate to derive total revenue from this source.

#### Adjustments and Distribution

Once total tax revenue for each fiscal year is determined, the applicable distribution percentage, 100 percent to the general fund, is applied.

## Revenue Estimate Profile

## **Capital Land Grant Interest and Income**

**Revenue Description:** Lands granted by the federal government to the state generate income from a variety of sources. Section 12 of the *Enabling Act* requires that income generated on certain sections of federally granted land be used for public buildings at the state capital for construction, repair, renovation, and other permanent improvements of state buildings. Capital land grant funds can also be used for the acquisition of land for such buildings, as well as the payment of principal and interest on bonds issued for any of these purposes.

Non-permanent sources of revenue generated from capital land grant lands include: grazing fees, agricultural fees, miscellaneous fees and rentals, and oil and natural gas leases and penalties. Statute requires that 3.0 percent of total non-permanent revenue be diverted to the Department of Natural Resources and Conservation (DNRC) for resource development purposes. Senate Bill 48, passed by the 1999 legislature, allows an amount up to 10 percent of the previous year's revenue to be diverted each year to a state special revenue account used to fund the Trust Land Management Division of DNRC. Permanent sources of revenue generated from capital land grant lands include timber sales and oil and natural gas royalties. A portion of timber sale revenue is diverted to DNRC to fund a portion of its timber program based on the amount appropriated by the legislature (the remaining portion is funded with timber sale revenue from the common school and other land trusts that generate timber revenue).

### **Statutory Reference:**

Tax Rate - NA

Tax Distribution (MCA) – 18-2-107

Enabling Act, Sections 10, 12 & 17

Other (MCA) – DNRC trust land administration diversion (77-1-109)

DNRC timber sale program diversion (77-1-613)

DNRC land bank administration diversion (77-2-362)

DNRC resource development diversion (77-1-607)

Applicable Tax Rate(s): N/A

**Distribution:** After diversions for DNRC administration, all remaining capital land grant income is deposited into a capital projects fund to be used for projects on the state capital complex in accordance with the provisions of Section 12 of the *Enabling Act* 

#### Distribution Chart:

Capital Projects Fund

Collection Frequency: Monthly

% of Total General Fund Revenue: N/A

#### **Revenue Estimate Methodology:**

The estimate for interest and income from the capital land grant trust is conducted with the goal of deriving the <u>net</u> amount of revenue that will be distributed to the trust beneficiary. This means that in addition to estimating the various revenues from the capital land grant trust, estimates of the various diversions that reduce the amount of revenue deposited to the capital program fund must also be estimated. Therefore, the estimated amounts shown for this revenue source are not total revenues, but are net of

Revenue Estimate Profile

## **Capital Land Grant Interest and Income**

diversions. Since all of the trust income is distributed, the trust has no monetary corpus.

#### Data

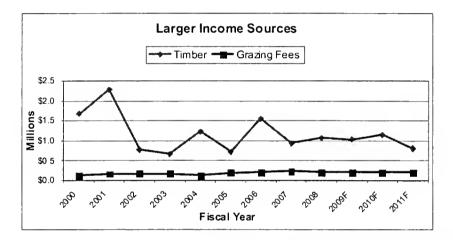

Data from SABHRS provide a history of each individual interest and income revenue component from which estimates can be made. Department of Natural Resources and Conservation (DNRC) annual reports provide additional information such as mineral prices and production. Budget submissions on the state budgeting system (MBARS) provide anticipated amount of diversions.

#### Analysis

The estimate is derived by first estimating the revenue components and then estimating the amounts of the diversions.

#### Revenue Components

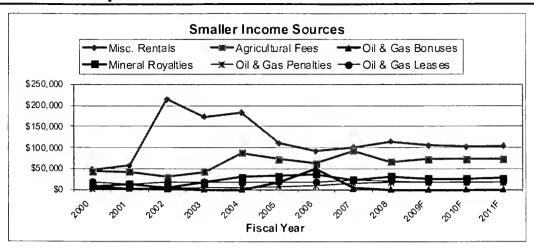

- 1. Timber Estimates of timber harvest from capital land grant trust lands are taken directly from DNRC estimates.
- Grazing Fees Rates are tied to the price of cattle. Cattle prices are expected to be close to those experienced in FY 2008, perhaps slightly less. DNRC personnel anticipate the grazing fee revenue will be similar to FY 2008.

- Miscellaneous Rentals These are small income components that are combined and estimated together. For each fiscal
  year estimated, the estimate is based on the average annual growth rate of the previous four years with the highest and
  lowest amounts removed.
- 4. Agricultural Fees Fees are based on a crop share basis. Commodity prices are expected to be higher than FY 2008 resulting in greater returns. DNRC personnel anticipate that overall revenue will be higher than FY 2008 levels (see the figure below). Based on this information, revenues are increased in FY 2009 and remain constant through FY 2010 and FY 2011.
- 5. Oil & Gas Bonuses With record highs in energy prices, competition to obtain mineral leases has increased, resulting in larger bonus payments. Estimates continue the amount received in fiscal 2008.
- 6. Oil & Gas Leases For each fiscal year estimated, the estimate is the average of the previous nine years with the highest and lowest years discarded.
- 7. Mineral Royalties Mineral royalties are received from oil and natural gas. Oil royalties are estimated by increasing the previous fiscal year's production by the growth rate obtained from average annual growth from for the previous 13 years with the highest and lowest years discarded. For natural gas royalties, estimates continue at the amount received in fiscal 2008.
- 8. Oil & Gas Penalties For each fiscal year estimated, the estimate is the average of the previous two years.

Revenue Estimate Profile

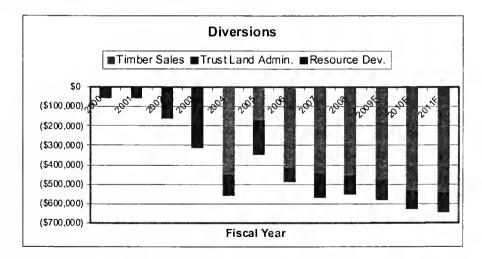

## **Capital Land Grant Interest and Income**

#### Diversions

Diversions fund operational costs in DNRC, but reduce the amount of revenue distributed to the trust beneficiaries (see the figure below). To determine future diversion amounts, DNRC's present law budget amounts are used.

- 1. Trust Land Administration Account Of the total expenditures requested to be made from this account, a portion is funded by capital land grant trust revenue. That portion is determined by multiplying current year revenue estimates by the ratio of FY 2008 costs to FY 2007 revenue. In fiscal 2008, the capital land grant trust funded 2.0 percent of total expenditures.
- 2. Timber Sales Account A portion of timber sale revenue from the capital land grant trust is used to fund costs associated with the timber sale program on the trust lands. Other trusts with timber revenue also pay into this account. The portion each pays is the ratio of its timber sale revenue to the total state-wide timber sale revenue multiplied by the total cost of the program. This division reduced permanent revenue that would have been deposited to the trust.
- 3. Resource Development Account Three percent of all income from the trust is diverted to an account to fund resource development on the trust lands. Mineral royalties are excluded.

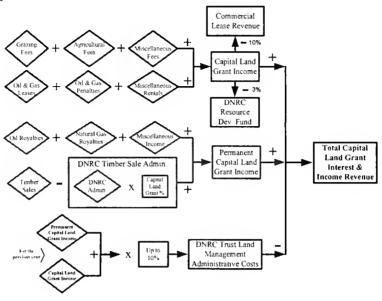

#### Adjustments and Distribution

Once total revenue and total diversions have been estimated, the net amounts are distributed 100 percent to the capital project fund.

### Revenue Estimate Profile

### Coal Trust Interest

Revenue Description: Article IX, Section 5 of the Montana Constitution requires that 50.0 percent of all coal severance tax revenue be deposited in a permanent coal trust fund and that the principal of the trust "shall forever remain inviolate unless appropriated by a three-fourths vote of each house". Coal severance tax funds flowing into the trust fund are first used to secure and subsidize state bonds issued to finance water resource and renewable resource development projects and activities. With the enactment of House Bill 249 by the 2005 legislature, beginning fiscal 2006 the remaining funds are then split 50 percent (25 percent of total revenue) to the treasure state endowment trust fund, 25 percent (12.5 percent of total revenue) to the treasure state endowment regional water system trust fund, and 25 percent (12.5 percent of total revenue) to the big sky economic development trust fund. The permanent trust fund no longer receives coal severance tax revenue. By statute, interest earned on the permanent trust that is not earmarked to other programs is deposited to the general fund. When calculating interest earnings, the impact of loans made from the trust, such as the in-state investment program, is taken into account.

As of October 1, 1995, all fixed-income investments held by the state's major trust funds were transferred to a newly-created trust fund bond pool (TFBP). The majority of permanent coal tax trust funds are invested as part of the TFBP. Some funds, however, are invested on a short-term basis in the state's short-term investment pool (STIP). In addition, state law provides that trust funds may be used for in-state commercial loans to stimulate economic development. The state Constitution prohibits the investment of the permanent trust in common stock.

### Applicable Tax Rate(s): N/A

**Distribution:** Interest earned on the permanent coal tax trust fund is deposited into the general fund. Statute further annually statutorily appropriates interest income from \$140 million of the coal severance tax permanent fund as follows:

#### Fiscal 2006 - 2010

\$3,650,000 - to the research and commercialization state special revenue account

\$1,250,000 – for the growth through agriculture program

\$425,000 – to the Department of Commerce for certified regional development corporations

\$300,000 – to the Department of Commerce for export trade enhancement

\$200,000 – to the Department of Commerce for the Montana manufacturing extension center at MSU-Bozeman

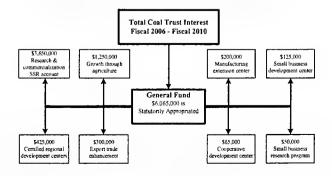

\$125,000 – to the Department of Commerce for a small business development center

\$65,000 – to the Cooperative Development Center

\$50,000 - to the Department of Commerce for a small business innovative research program

\$6,065,000

### **Revenue Estimate Methodology:**

#### Data

The data used to estimate interest earnings from the coal trust are obtained from the Board of Investments (BOI), Global Insight, and the state accounting system (SABHRS). The BOI provides information on historic interest rates as well as the gains and losses from the sale of securities. Projections of future interest rates are provided by Global Insight and historic interest collections are obtained from SABHRS.

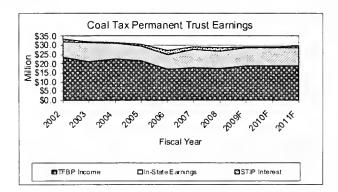

#### Analysis

The coal trust was created from distributions of the coal severance tax. While the Constitution requires that 50 percent of the coal severance tax collections be distributed into the coal trust, in early the 1990's the first sub-trust was created and two more were subsequently formed. Currently, the required coal tax revenue flows into the three sub-trusts and none of the tax revenue is deposited into the permanent coal trust. The principal or corpus of the coal trust (the portion that generates general fund interest) now stands at \$531.7 million.

To forecast the coal trust interest earnings, four interest/income components are estimated independently and summed. The interest/income components include:

- Trust funds bond pool (TFBP)
- In-state investments
- Short-term investment pool (STIP)
- Payback interest

The TFBP was formed in 1995 to manage the fixed investments held in the state's major trust funds. Each trust owns "shares" of the pool and interest earnings are paid to each trust on a per-share basis. TFBP earnings are the largest source of earnings for the trust, as shown in the figure below. To estimate TFBP earnings, the base year (fiscal 2008) rate of return generated by the pool, as reported by the BOI, is adjusted during the forecast period for maturing securities. The applicable new long-term rate for these securities is based on an average of four long-term rates projected by Global Insight. The fiscal year long-term rate is expected to be 5.5 percent in fiscal years 2009 and 2010 and 5.7 percent for fiscal year 2011.

As seen in the figure above, earnings from in-state investments are the second largest source of income to the coal tax trust. The BOI is required by statute to invest twenty-five percent of the coal tax trust in the Montana economy. Investments must be made to maximize the long-term benefit to the Montana economy. In-state investments primarily consist of loans to Montana business entities and earnings are equal to the interest charged on the loans. The in-state balance is held constant throughout the biennium

Revenue Estimate Profile

### **Coal Trust Interest**

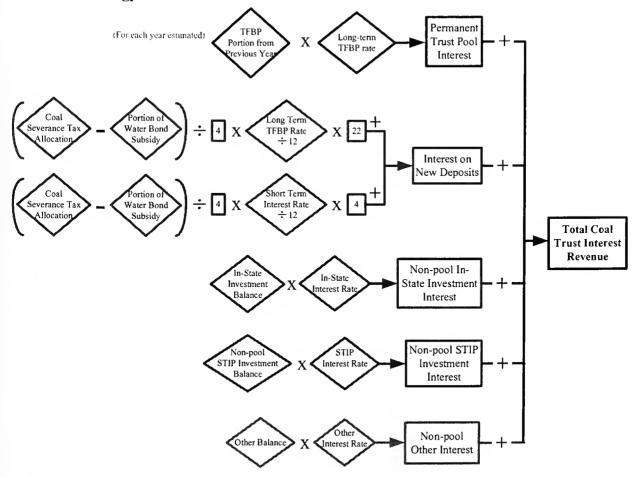

because no new flow of revenue is expected.

STIP interest (including other interest) is earned on cash, prior to investment in long-term investments. Funds are acquired from new deposits and/or maturing securities in the forecast period. Funds are held in STIP until the BOI determines that conditions are favorable for investment in the TFBP. To estimate future STIP earnings, an average short-term interest rate is developed based on Global Insight projections of three short-term investments. The average of these rates is then converted to a fiscal year basis. The average fiscal year short-term rate is expected to be 1.5 percent in fiscal 2009, I.7 percent in fiscal 2010, and 3.2 percent in fiscal 2011.

Payback interest earnings result from a loan of \$46.4 million to the common school trust fund, approved in SB 495 during the 2003 session. Interest on the loan is required to equal the rate of return generated by the TFBP. Additional income is derived from payment of the loan principal. Principal repayments may be temporarily placed into STIP and earn interest until invested in the TFBP. Loan interest paid into the trust declines as the outstanding principal is repaid. Earnings on loan principal payments are projected by applying the TFBP long-term interest rate to the principal payments.

After the estimates are calculated, the projected earnings from the four sources are combined to reach total coal trust interest revenue, and the revenues are distributed as described above.

Revenue Estimate Profile

## **Common School Interest and Income**

Revenue Description: Lands granted by the federal government to the state for the benefit of public schools generate income. The common school trust is actually part of the trust and legacy trust fund that includes nine other trusts. Prior to fiscal 1996, interest and income from the common school trust was deposited in the state equalization account. Beginning in fiscal 1996, this interest and income was deposited in the general fund, as mandated by SB 83, passed by the 1995 legislature. Beginning fiscal 2003, House Bill 7 from the August 2002 special legislative session changed the deposit to the state special revenue guarantee account and statutorily appropriated the money for schools. The estimates show the amount of revenue deposited to the guarantee account and are net of amounts diverted (of mineral royalties, timber sale revenue, and income) for DNRC administration costs. Included is timber revenue for school technology. Mineral royalty revenue required to pay interest and principal on the SB 495 loan is not include since the loan was repaid in FY 2008. All net mineral royalty revenue is deposited to the guarantee account for transfer to the school facility improvement account. These items are explained below.

Common school lands produce two kinds of revenue: 1) distributable income such as interest earnings, agricultural rents or crop shares, and timber sale revenue; and 2) permanent income that is returned to the trust such as income from the sale of minerals (see the effects of Senate Bill 495 from the 2003 legislative session below), land, and easements. Excluding the amount of timber sale revenue diverted for DNRC administration and school technology and after a 3.0 percent deduction of the revenue for use by the Department of Natural Resources and Conservation (DNRC), 95 percent of distributable revenue is available to fund schools and, due to Senate Bill 48 (discussed below), the remaining 5.0 percent is available to fund the Trust Land Management Division of DNRC. The 3.0 percent allocation to DNRC is used for resource development purposes. Timber revenue is allocated: 1) first to DNRC to fund a portion of its timber program based on the amount appropriated by the legislature (the remaining portion is funded with timber sale revenue from the capital land grant and other land trusts that generate timber revenue); 2) the amount received from production over 18 million board feet is deposited into the state special revenue fund for school technology equipment and training and is statutorily appropriated to OPI (House Bill 41 enacted by the 2001 legislature and House Bill 7 from the August 2002 special legislative session); and 3) any remainder for the support of public schools.

Senate Bill 48, passed by the 1999 legislature, provides for the diversion of the following funds for the purpose of funding the Trust Land Management Division in the DNRC: 1) mineral royalties; 2) revenues from the sale of easements; and 3) 5.0 percent of interest and income previously credited to the common school trust. The amount of the money diverted from the common school trust reduces the growth of the trust fund balance and, hence, reduces the amount of distributable interest earnings.

As of October 1, 1995, all fixed-income investments held by the state's major trust funds (which include the trust and legacy fund of which the common school trust is a part), were transferred to a newly-created Trust Funds Bond Pool (TFBP). The majority of common school trust funds are invested as part of the TFBP. Some funds, however, are invested on a short-term basis in the state's Short Term Investment Pool (STIP). The state Constitution prohibits the investment of common school trust funds in common stock. Interest income is distributed 95 percent to the guarantee account and 5 percent is available for DNRC administration with the remainder deposited to the trust.

Senate Bill 495 (enacted by the 2001 legislature) authorized DNRC to purchase the mineral production rights (with a loan from the coal severance trust) from the common school trust. The department subsequently purchased \$138.9 million of net future mineral royalties from the school trust for \$46.4 million. Since these royalties will no longer be deposited to the trust, interest earnings from the trust corpus are lessened. It is estimated that the trust balance will be at least \$92.5 million less after all the \$138.9 million has been distributed. The net mineral royalties are first used to pay the principal and interest of the \$46.4 million loan with the remainder deposited to the guarantee account to fund base aid. Since the loan was paid off in FY 2008, SB 2 (May 2007 special session) directs that all net mineral royalties (until the total amount of \$138.9 million that was purchased is received) are to be deposited to the guarantee account and then transferred to the school facility improvement account. Based on mineral royalty estimates for the 2011 biennium, it is anticipated that the \$138.9 million in net mineral royalties will be achieved in the FY 2010. When this occurs, mineral royalties will again become part of the trust corpus and will generate additional earnings. For further information and analysis on Senate Bill 495 contact the Legislative Fiscal Division for a copy of the two-part report: "Senate Bill 495-Implementation, Impacts and Implications".

### Applicable Tax Rate(s): N/A

**Distribution:** As described above, interest and income from common school lands (including a portion of timber sales and after amounts diverted for DNRC administration) are distributed 95.0 percent to the state special revenue guarantee account and are statutorily appropriated for schools. The remaining 5.0 percent is available to fund the Trust Land Management Division with the remainder deposited to the trust fund. Up until the total of \$138.9 million of purchased royalties is reached, the portion of mineral royalties not used for DNRC administration is deposited to the guarantee account and, with the enactment of SB 2 (May 2007 special session), transferred to the new school facility improvement account. The amounts deposited to the guarantee account are shown in this revenue source.

### Distribution Chart:

**Collection Frequency:** Revenue is received monthly, however, distribution to the state special revenue fund takes place three times per year.

% of Total General Fund Revenue: N/A

## Revenue Estimate Methodology:

The estimate for interest and income from the common school trust is conducted with the goal of deriving the <u>net</u> amount of revenue that will be deposited to the guarantee account. This means that in addition to estimating the various revenues from the common school trust, estimates of the various diversions that reduce the amount of revenue deposited to the guarantee account must also be estimated. Therefore, the estimated amounts shown for this revenue source are not total revenues, but are net of diversions.

#### Data

Data from the state accounting system (SABHRS) provide a history of each individual interest and income revenue component from which estimates can be made. Department of Natural Resources and Conservation (DNRC) annual reports provide additional information such as mineral prices and production. Budget submissions on the state budgeting system (MBARS) provide anticipated amount of diversions. DNRC personnel are contacted for their views on potential future factors that may influence revenues such as easement sales, changes in grazing and agricultural rentals, and timber harvest volumes. Global Insight provides future estimates of West Texas Intermediate oil and national well head natural gas prices.

Revenue Estimate Profile

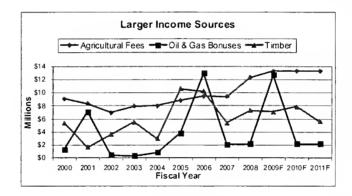

## **Common School Interest and Income**

### Analysis

The estimate is derived by first estimating the revenue components and then estimating the amounts of the diversions.

### Revenue Components

- Agricultural Fees Fees are based on a crop share basis. Commodity prices are expected to be higher than FY 2008 resulting in greater returns. DNRC personnel anticipate that overall revenue will be about \$1.0 million more than FY 2008 levels (see the figure below). Based on this information, revenues are increased in FY 2009 and remain constant through FY 2010 and FY 2011.
- 2. Timber Estimates of timber harvest revenue from common school trust lands are taken directly from DNRC estimates provided in October 2008.
- Oil & Gas Bonuses With record highs in energy prices, competition to obtain mineral leases has increased, resulting in large bonus payments. A single large one-time bonus payment of \$10.6 million has already been received in FY 2009. All years contain a base amount of \$2.2 million that was received in FY 2008.

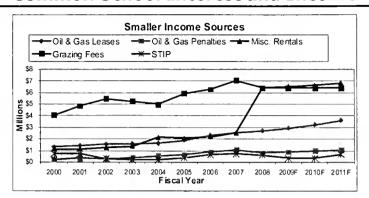

- Grazing Fees Rates are tied to the price of cattle. Cattle prices are expected to be close to those experienced in FY 2008, perhaps slightly less. DNRC personnel anticipate the grazing fee revenue will be similar to FY 2008.
- Oil & Gas Leases For each fiscal year estimated, an average annual growth rate over the previous eight year period was applied beginning with FY 2008 collections.
- Oil & Gas Penalties For each fiscal year estimated, the ratio of the previous year's penalties to the previous year's oil and gas lease revenue was multiplied by that year's estimate for oil and gas lease revenue.
- Miscellaneous Rentals The estimate involves two parts: a) in FY 2008, Avista signed an agreement to pay rent for hydroelectric generation projects of \$4.0 million each year increased by the rate of inflation in each subsequent year; and b) the remaining small income base components are estimated together by using an average annual growth rate over the previous two year period beginning with FY 2008 collections, excluding the Avista rents.
- Short-term Investment Pool (STIP) Because revenue initially deposited in the common school trust is invested on a short-term basis (about one month) before being invested in the T & L fund, a short-term rate is used to calculate the earnings. The short-term rate is a composite of Global Insight forecasts for the 3-month commercial paper, 3-month treasury bill, and 6-month treasury bill rates and is estimated to be 1.5 percent in FY 2009, 1.7 percent in FY 2010, and 3.2 percent in FY 2011.

144

Revenue Estimate Profile

### **Common School Interest and Income**

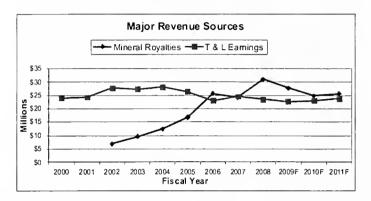

- Mineral Royalties Mineral royalties are received from the mining of oil, natural gas, coal, sand and gravel, and other smaller sources. Due to the passage of SB 495 by the 2001 legislature effective FY 2002, mineral royalties are considered distributable income until a net amount (net of diversions that fund trust land administration) of \$138.9 million has been distributed. After that time, mineral royalties will again be deposited to the common school trust and will become part of the trust corpus. The additional corpus will generate additional earnings. It is expected that the effects of SB 495 will terminate in FY 2010. The figure below shows total mineral royalties since FY 2002. The estimate for mineral royalties is obtained by multiplying together estimates for production, price, and the applicable royalty rate.
  - Production Oil and natural gas production is estimated by increasing the previous fiscal year's production by the growth rate obtained from a two-year average of the estimates for statewide oil and natural gas production (see the Oil and Natural Gas Production Tax profile). Coal production on state lands comes primarily from a single coal company with minor amounts from another company. Calendar year information on projected production and percentage of production on state lands was obtained by surveying coal companies, including the companies producing on state lands, from which the amount of production on state lands is derived. Fiscal year production is obtained by averaging production for the current and previous calendar years. All other mineral production was held constant at the amount of gravel royalty collection in FY 2008.
  - Price Oil prices are calculated by increasing the previous year's Montana price by the growth between the average
    West Texas Intermediate price estimates obtained from Global Insight for the four quarters of the same fiscal years.
    The same methodology is used for natural gas with the driving factor being the Global Insight estimated national
    well head price. Coal price is determined by increasing the previous fiscal year's price by a growth rate obtained
    from a two-year average of the calendar year estimates for Montana coal prices (see the Coal Severance Tax profile).
- 10. Trust and Legacy Earnings The monetary assets of the common school trust are pooled with monetary assets of other land trusts (termed "Trust and Legacy") and invested by the Board of Investment in the trust funds bond pool. Based on the number of share each trust owns, a share of the earnings is deposited in each trust. For the common school trust, the actual FY 2008 share of 92.64 percent is used. The pool balance grows when permanent revenue is deposited from the various land trust, including the common school trust. DNRC personnel state that no substantial sales of right-of-ways (a source of permanent revenue) are anticipated in the three fiscal years. However, due to the anticipated ending of SB 495 in FY 2010, mineral royalties (permanent revenue) will once again add to the balance. The estimation of the total pool earnings is a three stage process:
  - Earnings from new deposits New deposits in the pool are estimated to be \$1.6 million in FY 2009, \$8.5 million in FY 2010, and \$22.6 million in FY 2011. Of the total additions in FY 2010-FY2011, \$28.0 million (\$6.7 million in FY 2010 and \$21.3 million in FY 2011) is from mineral royalties being deposited to the trust due to the end of SB 495. This additional money initially earns interest at the short-term rate (1.5 percent for FY 2009, 1.7 percent for FY 2010, and 3.2 percent for FY 2011) before it is invested in a longer term investment (5.5 percent for FY 2009, 5.5 percent for FY 2010, and 5.7 percent for FY 2011). Also included in these calculations are short-term earnings from the estimated \$4.1 million average balance in the common school Land Bank Trust Fund.
  - Earnings from existing balance The TFBP balance in FY 2008 was \$439.2 million. These funds have been invested in bonds purchased over the past several years with an average return 5.6 percent.

Revenue Estimate Profile

## **Common School Interest and Income**

• Non-portfolio earnings – Money not invested in the trust funds bond pool earns interest at the short-term rate of 1.7 percent for FY 2009, 2.0 percent for FY 2010, and 4.0 percent for FY 2011percent on a balance of \$2.5 million, the actual balance in FY 2008.

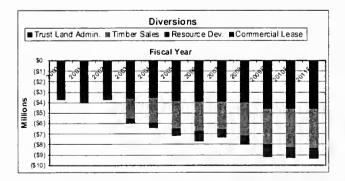

Once the total amount of the pool earnings has been estimated by summing the above three items, the common school share of 92.64 percent is applied.

### Diversions

Diversions fund operational costs in DNRC, but reduce the amount of revenue distributed to the trust beneficiaries (see the figure below). To determine future diversion amounts, DNRC's present law budget amounts are used.

- 1. Trust Land Administration Account Of the total expenditures requested to be made from this account, a percentage of the expenditures are funded by common school trust revenue. A portion of mineral royalties and permanent income is diverted to this account to fund department's activities in managing the common school trust lands. The portion of permanent revenue is determined by multiplying the amount of permanent revenue by the ratio of permanent revenue to the sum of mineral royalties and permanent revenue. Mineral royalty revenue funds the remainder of the expenditures.
- 2. Timber Sales Account A portion of timber sale revenue from the common school trust is used to fund costs associated with the timber sale program on the trust lands. Other trusts with timber revenue also pay into this account. The portion each pays is the ratio of its timber sale revenue to the total state-wide timber sale revenue multiplied by the total cost of the program. In FY 2008, the common school trust funded 74.4 percent of total expenditures.
- Resource Development Account Three percent of all income (excluding commercial lease income) from the common school
  trust is diverted to an account to fund resource development on the trust lands. Interest earnings are not included in the
  calculations.
- Commercial Leasing Account Ten percent of revenue received from commercial leases is diverted to an account to fund
  activities associated with administering the leases.

### Adjustments and Distribution

Once total revenue and total diversions have been estimated, the net amounts are distributed:

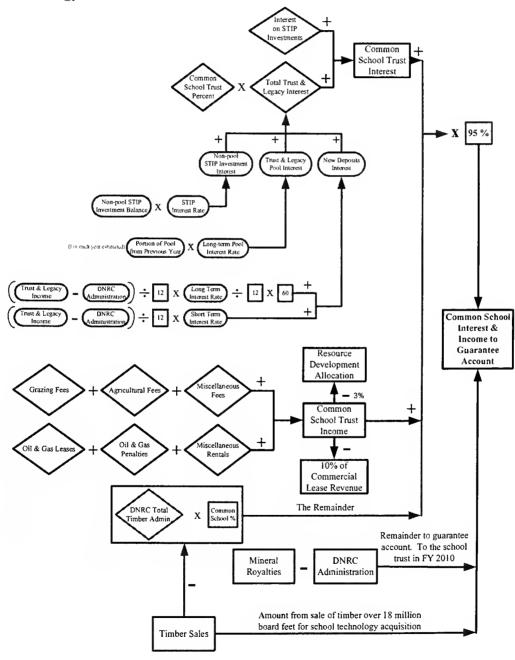

1. 95 percent of the net amount of interest and income (including the Avista amount), excluding timber and mineral royalties, is deposited to the guarantee account and the remaining 5 percent is returned to the trust. The money deposited to the guarantee account is used for public schools.

Revenue Estimate Profile

### **Common School Interest and Income**

- 2. The value received from timber sales over 18 million board feet is distributed to the guarantee account to fund school technology. The amount of money distributed to the account in one year is spent in the next year.
- 3. The remaining amount of timber (if any) is distributed 95 percent to the guarantee account and 5 percent is returned to the trust. The money deposited to the guarantee account is used for public schools.
- 4. From FY 2009 to part way through FY 2010, mineral royalties are used for fund administrative costs with the remainder distributed to the guarantee account and then transferred to the school facility improvement account. Beginning part way through FY 2010, SB 495 ends and mineral royalty revenue net of administration costs becomes part of the permanent trust fund.

## Revenue Estimate Profile

# **Cultural Trust Interest**

Revenue Description: Beginning in fiscal 1976, a portion of coal severance tax revenue was deposited into the Parks Acquisition and Arts Protection trust fund. The 1991 legislature split the principal of this trust into two separate trusts, the Parks Acquisition trust and the Arts Protection trust (cultural trust), with coal severance taxes allocated to each one. The 1997 legislature appropriated \$3.9 million from the cultural trust fund for the immediate purchase of Virginia and Nevada City properties. This action resulted in a loss of trust interest revenue that otherwise would be used to fund cultural and aesthetic (C&A) projects in the state during the 1999 biennium. Thus, beginning July 1, 1997, and ending June 30, 1999, 0.87 percent in coal severance tax revenue was allocated to an account in the state special revenue fund to compensate for the lost interest earnings and the previous 0.63 percent distribution of coal severance tax to the cultural trust was eliminated. Except for fiscal 2003, beginning July 1, 1999, the amount of 0.63 percent is once again statutorily allocated to the cultural trust, the interest from which is to be used for the purpose of protection of works of art in the capitol and for other cultural and aesthetic projects. The August 2002 special legislative session eliminated the allocation for fiscal 2003 only. In HB 9, the 2005 Legislature transferred \$3,412,500 from the general fund to the trust and the 2007 Legislature transferred \$1,500,000 from the general fund to the trust. Both these actions increase the earnings from the trust.

Collection Frequency: Monthly

% of Total General Fund Revenue: N/A

### Revenue Estimate Methodology:

#### Data

The data used to estimate the interest and earnings of the cultural trust are collected from the Board of Investments (BOI), Global Insight, and the state accounting system (SABHRS). The BOI provides historic interest earnings from the trust as well as the gains and losses from the sale of investment instruments. Projections of interest rates are provided by Global Insight, and historic earnings are provided from SABHRS. No adjustments are required on the raw data in preparation for analysis.

### Analysis

The cultural trust, formed in the late 1970's, was created from distributions of the coal severance tax. The cultural trust receives coal tax distributions at the rate of 0.63 percent of the total tax. In several years of budget stress, the coal tax distribution to the cultural trust was temporarily eliminated or reduced. The principal of the trust was reduced by \$3.9 million in fiscal 1997 and the funds were used for the purchase of Virginia and Nevada Cities. In fiscal 2006, the trust was reimbursed for \$3.4 million,

Revenue Estimates as Adopted by the

November 17, 2008

Revenue Estimate Profile

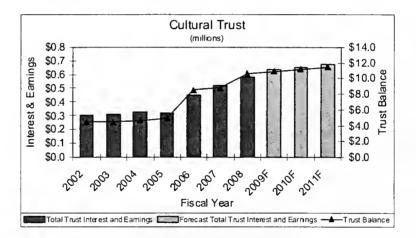

### **Cultural Trust Interest**

substantially increasing the principal of the trust. The principal or corpus of the cultural trust now stands at \$10.6 million, as demonstrated by the line in the figure below. Estimates of future deposits to the cultural trust are developed in the coal severance tax projection and are expected to be \$279,000 in fiscal 2009, \$290,000 in fiscal 2010, and \$304,000 in fiscal 2011.

To forecast the cultural trust interest earnings, each of three interest/income components are estimated independently and combined. The estimated interest/income components include:

- The trust funds bond pool (TFBP)
- The short term investment pool (STIP)
- New trust deposits

The TFBP was formed in 1995 to manage the fixed investments held in the state's major trust funds. TFBP earnings are the largest source of earnings for the trust. The TFBP earnings are estimated by applying a long-term interest rate to the projected TFBP balance. The applicable long term rate is an average of four rates projected by Global Insight and includes the corporation Aaa bond rate, the corporate Baa bond rate, the rate on 10-year treasury bonds, and the rate on 30-year treasury bonds. The average rate is then factored to produce a fiscal year average rate. The fiscal year average long-term interest rate is expected to be 5.5 percent in fiscal years 2009 and 2010 and 5.7 percent in fiscal year 2011.

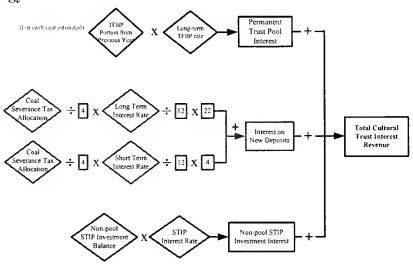

STIP interest is earned on the temporary investment of trust funds. Funds are acquired from activities such as new deposits and investment sales. Funds are held in STIP until the BOI determines that conditions are favorable for deposit in the TFBP. To estimate future STIP earnings, an average short-term interest rate is developed, based on Global Insight projections of the interest rates on three and six-month corporate loans and three and six-month treasury bills. The average rates are then factored to a fiscal year average rate. The average fiscal year short-term interest rate is expected to be 1.5 percent in fiscal year 2009, 1.7 percent in fiscal year 2010, and 3.2 percent in fiscal year 2011.

The 0.63 percent coal severance tax distribution to the cultural trust is considered new deposits. New deposits are transferred to the trust on a quarterly basis. When the BOI receives the coal tax transfer, the funds are immediately invested in STIP. Funds are expected to remain in STIP for one month before being invested in the TFBP. The interest earned on new deposits is estimated by summing STIP earnings for one month with TFBP earnings for the remainder of the year.

Revenue Estimate Profile

### **Deaf and Blind Trust Interest and Income**

Revenue Description: Lands granted by the federal government to the state for the benefit of public schools and various state institutions generate income. These lands produce revenue through rents or crop shares for agricultural purposes, royalties from the sale of mineral rights, and sales of timber. Income from certain portions of public school/institution lands has been designated for support of the School for the Deaf and Blind. Thus, some of these funds are deposited into a component of the trust and legacy trust fund referred to as the Deaf and Blind trust, which generates interest earnings for the state. As of October 1, 1995, all fixed-income investments held by the state's major trust funds were transferred to a newly-created Trust Funds Bond Pool (TFBP). The majority of trust and legacy trust funds are invested as part of the TFBP. Some funds, however, are invested on a short-term basis in the state's Short Term Investment Pool (STIP). The state constitution prohibits the investment of the permanent trust in common stock.

In accordance with statute, 3.0 percent of Deaf and Blind trust interest and income is diverted to the Department of Natural Resources and Conservation (DNRC) to be used for resource development purposes. Senate Bill 48, passed by the 1999 legislature, provides for the diversion of the following funds for the purpose of funding the Trust Land Management Division in the DNRC: 1) mineral royalties; 2) revenues from the sale of easements; and 3) 5.0 percent of interest and income previously credited to the common school trust. In addition, a portion of timber sale revenue is diverted to fund a portion of DNRC's timber program. The amount of the money diverted from the Deaf and Blind trust reduces the growth of the trust fund balance and, hence, reduces the amount of distributable interest earnings.

Revenue Estimate Profile

## **Deaf and Blind Trust Interest and Income**

### **Revenue Estimate Methodology:**

The estimate for interest and income from the Deaf and Blind trust is conducted with the goal of deriving the <u>net</u> amount of revenue that will be distributed to the trust beneficiary. This means that in addition to estimating the various distributable revenues from the trust, estimates of the various diversions that reduce the amount of distributable revenue must also be estimated. Therefore, the estimated amounts shown for this revenue source are not total revenues, but are net of diversions. Permanent revenue (revenue that is not distributed, but remains in the trust such as from timber and mineral royalties), is estimated as part of the entire Trust and Legacy account (T & L) and earnings are apportioned to this trust according to the number of shares owned.

#### Data

Data from the state accounting system (SABHRS) provide a history of each individual interest and income revenue component from which estimates can be made. Department of Natural Resources and Conservation (DNRC) annual reports provide additional information such as mineral prices and production and timber estimates. Budget submissions on the state budgeting system (MBARS) provide anticipated amount of diversions.

### Analysis

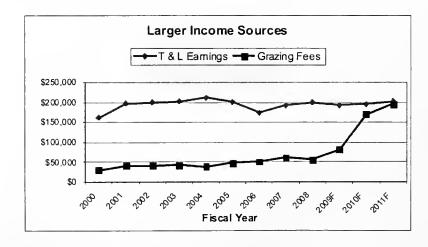

The estimate is derived by first estimating the distributable revenue components and then estimating the amounts of the diversions.

### Revenue Components

- 1. Trust and Legacy Earnings (see the figure below) The monetary assets of the trust are pooled with monetary assets of other land trusts in the T & L and invested by the Board of Investment in the trust funds bond pool. Based on the number of share each trust owns, a share of the earnings is deposited in each trust. For the Deaf and Blind trust, the actual FY 2008 share percentage of 0.79 is used. The estimation of the total pool earnings is a three stage process:
  - Earnings from new deposits New deposits in the pool are estimated to be in \$1.6 million in FY 2009, \$8.5 million in FY 2010 and \$22.6 million in FY 2011. This additional money initially earns interest at the short-term rate (1.5 percent in FY 2009, 1.7 percent in FY 2010, and 3.2 percent in FY 2011) before it is invested in a longer term investment (5.5 percent in FY 2009, 5.5 percent in FY 2010, and 5.7 percent in FY 2011).
  - Earnings from existing balance The pool balance in FY 2008 was \$439.2 million. The majority of these funds have been invested in bonds purchased over the past several year and average a return rate of 5.6 percent.
  - Non-portfolio earnings Money not invested in the trust funds bond pool earns interest at the short-term rate of 1.7 in FY 2009, 2.0 percent in FY 2010, and 4.0 percent in FY 2011 on a balance of \$2.5 million, the actual balance from FY 2008.

Once the total amount of the pool earnings has been estimated by summing the above three items, the Deaf and Blind trust share of 0.79 percent is applied.

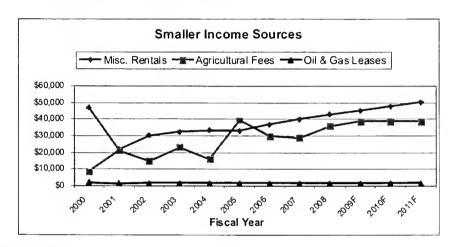

2. Grazing Fees – Rates are tied to the price of cattle. Cattle prices are expected to be close to those experienced in FY 2008, perhaps slightly less. DNRC personnel anticipate the grazing fee revenue will be similar to FY 2008.

Revenue Estimate Profile

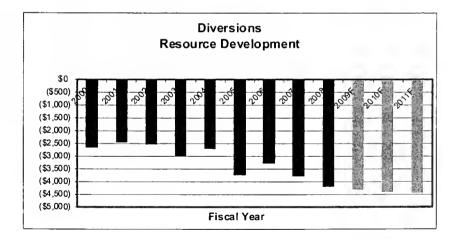

## **Deaf and Blind Trust Interest and Income**

- 3. Miscellaneous Rentals These are small income components that are combined and estimated together. For each fiscal year estimated, the estimate is based on the growth rate between FY 2002 and FY 2008.
- 4. Agricultural Fees Fees are based on a crop share basis. Commodity prices are expected to be higher than FY 2008 resulting in greater returns. DNRC personnel anticipate that overall revenue will be more than FY 2008 levels (see the figure below). Based on this information, revenues are increased in FY 2009 and remain constant through FY 2010 and FY 2011.
- 5. Oil & Gas Leases For each fiscal year estimated, the estimate is the average of the previous three years.

#### Diversions

Diversions fund operational costs in DNRC, but reduce the amount of revenue distributed to the trust beneficiaries (see the figure below). To determine future diversion amounts, DNRC's present law budget amounts are used. The only diversion that affects distributable revenue is the three percent of all income from the trust that is diverted to an account to fund resource development on the trust lands.

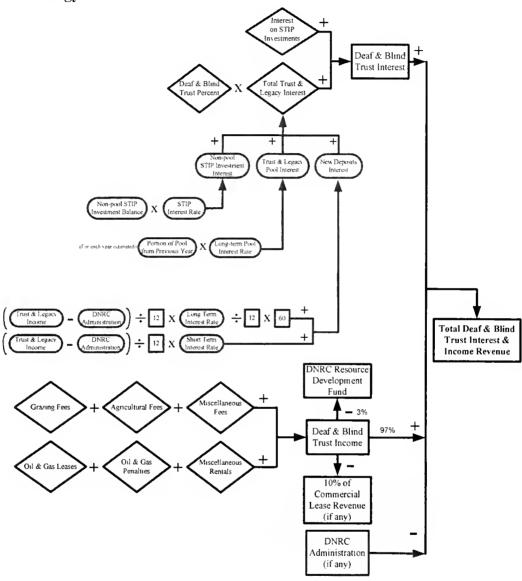

### Adjustments and Distribution

Once total revenue and total diversions have been estimated, the net amounts are distributed 100 percent to the state special revenue fund.

Revenue Estimate Profile

## **Economic Development Trust Interest**

Revenue Description: Article 1X, Section 5 of the Montana Constitution requires that 50.0 percent of all coal severance tax revenue be deposited in a permanent coal trust fund and that the principal of the trust "shall forever remain inviolate unless appropriated by a three-fourths vote of each house". Coal severance tax funds flowing into the trust fund are first used to secure and subsidize state bonds issued to finance water resource and renewable resource development projects and activities. With the enactment of House Bill 249 by the 2005 legislature, beginning fiscal 2006 the remaining funds are then split 50 percent (25 percent of total revenue) to the treasure state endowment trust fund, 25 percent (12.5 percent of total revenue) to the treasure state endowment regional water system trust fund, and 25 percent (12.5 percent of total revenue) to the big sky economic development trust fund. The permanent trust fund no longer receives coal severance tax revenue.

As of October 1, 1995, all fixed-income investments held by the state's major trust funds were transferred to a newly-created trust funds bond pool (TFBP). The majority of permanent coal tax trust funds are invested as part of the TFBP. Some funds, however, are invested on a short-term basis in the state's short-term investment pool (STIP). In addition, state law provides that trust funds may be used for in-state commercial loans to stimulate economic development.

**Distribution:** Interest earnings are deposited to a state special revenue fund and are statutorily appropriated to the Department of Commerce to pay administrative expenses with the remainder for:

- 1. 75% to local governments to be used for job creation; and
- 2. 25% to certified regional development corporations and economic development organizations

### Distribution Chart:

Revenue Estimate Profile

## **Economic Development Trust Interest**

Collection Frequency: Monthly

### Revenue Estimate Methodology:

#### Data

The data used to estimate interest earnings from the big sky economic trust are obtained from the Board of Investments (BOI), Global Insight, and the state accounting system (SABHRS). The BOI provides information on historic interest rates as well as the gains and losses from the sale of securities. Projections of future interest rates are provided by Global Insight and historic interest collections are obtained from SABHRS.

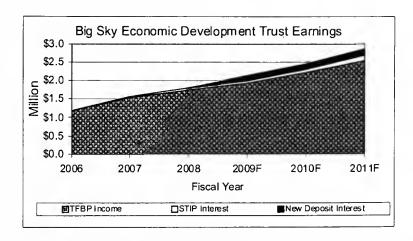

### **Analysis**

The economic trust was created from distributions of the coal severance tax. The economic trust was formed in fiscal 2006 as a sub-trust to the permanent coal trust. The Constitution requires that 50 percent of the coal severance tax collections be distributed to the coal trust, and 25 percent of that distribution (after the water bond debt service obligation is met) or 12.5 percent of total coal severance tax revenues is distributed to the Big Sky Economic Development trust. The principal or corpus of the trust now stands at \$37.9 million. Estimates of future deposits to the trust are developed in the coal severance tax projection and are expected to be \$5.3 million in fiscal 2009, \$5.7 million in fiscal 2010, and \$6.0 million in fiscal 2011.

To forecast the economic trust interest earnings, each of three interest/income components are estimated independently and combined. The estimated interest/income components include:

- Trust funds bond pool (TFBP)
- Short-term investment pool (ST1P)
- New trust deposits

The TFBP was formed in 1995 to manage the fixed investments held in the state's major trust funds. Each trust owns "shares" of the pool and interest earnings are paid to each trust on a per-share basis. TFBP earnings are the largest source of earnings for the trust, as shown in the figure below. To estimate TFBP earnings, the base year (fiscal 2008) rate of return generated by the pool, as reported by the BOI, is adjusted during the forecast period for maturing securities. The applicable new long-term rate for these securities is based on an average of four long-term rates projected by Global Insight. The fiscal year average long-term interest rate is expected to be 5.5 percent in fiscal years 2009 and 2010 and 5.7 percent in fiscal year 2011.

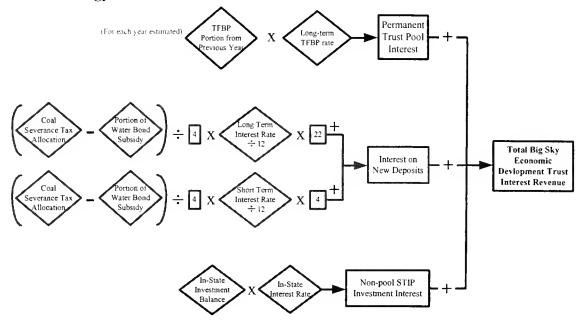

STIP interest (including other interest) is earned on cash, prior to investment in long-term investments. Funds are acquired from new deposits and/or maturing securities in the forecast period. Funds are held in STIP until the BOI determines that conditions are favorable for investment in the TFBP. To estimate future STIP earnings, an average short-term interest rate is developed, based on Global Insight projections of three short-term investments. The average of these rates is then converted to a fiscal year basis. The average fiscal year short-term interest rate is expected to be 1.5 percent in fiscal year 2009, 1.7 percent in fiscal year 2010, and 3.2 percent in fiscal year 2011.

Revenue Estimate Profile

# **Economic Development Trust Interest**

Coal severance tax distributions to the trust are considered new deposits. New deposits are transferred to the trust on a quarterly basis. When the BOI receives the coal tax transfer, the funds are immediately invested in STIP. Funds are expected to remain in STIP for one month before being invested in the TFBP. The interest earned on new deposits is estimated by summing STIP earnings for one month with TFBP earnings for the remainder of the year.

### **Revenue Projection:**

**Data Source(s):** Board of Investments, SABHRS, Wall Street Journal, Global Insight, Department of Natural Resources and Conservation

Contacts: Department of Natural Resources and Conservation

### Revenue Estimate Profile

### **Parks Trust Interest**

**Revenue Description:** Beginning in fiscal 1976, a portion of coal severance tax revenue was deposited into the Parks Acquisition and Arts Protection trust fund. The 1991 legislature split the principal of this trust into two separate trusts, the Parks Acquisition trust (parks trust) and the Arts Protection trust (cultural trust), with coal severance taxes allocated to each one. Except for fiscal 2003, the amount of 1.27 percent of coal tax revenues is statutorily allocated to the parks trust for the purpose of parks acquisition or management. The August 2002 special legislative session eliminated the allocation for fiscal 2003 only. Income from the parks trust must be appropriated for the acquisition, development, operation, and maintenance of state parks, state recreational areas, state monuments, and state historical sites under control of the Department of Fish, Wildlife and Parks.

### **Statutory Reference:**

Tax Rate – NA
Distribution (MCA) – 15-35-108(4)
Date Due – NA

Applicable Tax Rate(s): N/A

**Distribution:** Interest earnings on the parks trust are allocated to the Department of Fish, Wildlife, and Parks and deposited to a state special revenue fund.

### **Distribution Chart:**

State Special Revenue Fund

Collection Frequency: Monthly

% of Total General Fund Revenue: N/A

## Revenue Estimate Methodology:

#### Data

The data used to estimate interest earnings from the parks trust are obtained from the Board of Investments (BOI), Global Insight, and the state accounting system (SABHRS). The BOI provides information on historic interest rates as well as the gains and losses from the sale of securities. Projections of future interest rates are provided by Global Insight and historic interest collections are obtained from SABHRS.

### **Analysis**

The parks trust, formed in the late 1970's, was created from distributions of the coal severance tax. The parks trust receives coal tax distributions at the rate of 1.27 percent of the total tax. In one year of budget stress, the coal tax distribution to the parks trust was temporarily eliminated. The principal or corpus of the parks trust now stands at \$18.7 million, as demonstrated by the line in the figure below. Estimates of future deposits to the parks trust are developed in the coal severance tax projection and are expected to be \$562,000 in fiscal 2009, \$585,000 in fiscal 2010, and \$613,000 in fiscal 2011.

To forecast the parks trust interest earnings, each of three interest/income components are estimated independently and combined. The estimated interest/income components include:

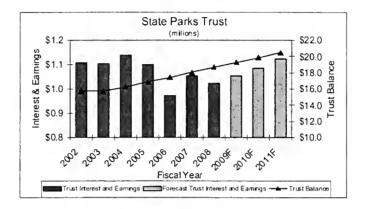

Trust funds bond pool (TFBP)

Revenue Estimate Profile

### **Parks Trust Interest**

- Short-term investment pool (STIP)
- New trust deposits

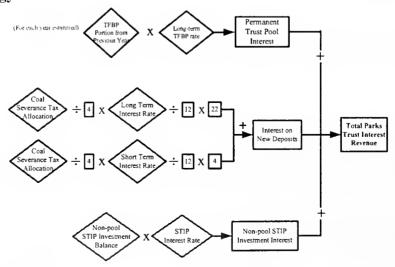

The TFBP was formed in 1995 to manage the fixed investments held in the state's major trust funds. Each trust owns "shares" of the pool and interest earnings are paid to each trust on a per-share basis. TFBP earnings are the largest source of earnings for the trust, as shown in the figure below. To estimate TFBP earnings, the base year (fiscal 2008) rate of return generated by the pool, as reported by the BOI, is adjusted during the forecast period for maturing securities. The applicable long-term rate for these securities is based on an average of four long-term rates projected by Global Insight. The fiscal year average long-term interest rate is expected to be 5.5 percent in fiscal years 2009 and 2010 and 5.7 in fiscal year 2011.

STIP interest (including other interest) is earned on cash, prior to investment in long-term investments. Funds are acquired from new deposits and/or maturing securities in the forecast period. Funds are held in STIP until the BOI determines that conditions are favorable for investment in the TFBP. To estimate future STIP earnings, an average short-term interest rate is developed, based on Global Insight projections of three short-term investments. The average of these rates is then converted to a fiscal year basis. The average fiscal year short-term interest rate is expected to be 1.5 percent in fiscal year 2009, 1.7 percent in fiscal year 2010, and 3.2 percent in fiscal year 2011.

The 1.27 percent coal severance tax distribution to the parks trust is considered new deposits. New deposits are transferred to the trust on a quarterly basis. When the BOI receives the coal tax transfer, the funds are immediately invested in STIP. Funds are expected to remain in STIP for one month before being invested in the TFBP. The interest earned on new deposits is estimated by summing STIP earnings for one month with TFBP earnings for the remainder of the year.

Revenue Estimate Profile

## **Pine Hills Interest and Income**

Revenue Description: Lands granted by the federal government to the state for the benefit of public schools and various state institutions generate income. These lands produce revenue through rents or crop shares for agricultural purposes, royalties from the sale of mineral rights, and sales of timber. Income from certain portions of public school/institution lands has been designated for the support of the Pine Hills youth correctional facility. Thus, some of these funds are deposited into a component of the trust and legacy trust fund referred to as the Pine Hills trust, which generates interest earnings for the state. As of October 1, 1995, all fixed-income investments held by the state's major trust funds were transferred to a newly-created Trust Funds Bond Pool (TFBP). The majority of trust and legacy trust funds are invested as part of the TFBP. Some funds, however, are invested on a short-term basis in the state's Short Term Investment Pool (STIP). The state constitution prohibits the investment of the permanent trust in common stock.

In accordance with statute, 3.0 percent of Pine Hills interest and income is diverted to the Department of Natural Resources and Conservation (DNRC) to be used for resource development purposes. Senate Bill 48, passed by the 1999 legislature, provides for the diversion of the following funds for the purpose of funding the Trust Land Management Division in the DNRC: 1) mineral royalties; 2) revenues from the sale of easements; and 3) 5.0 percent of interest and income previously credited to the common school trust. In addition, a portion of timber sale revenue is diverted to fund a portion of DNRC's timber program. The amount of the money diverted from the Pine Hills trust reduces the growth of the trust fund balance and, hence, reduces the amount of distributable interest earnings.

### Statute:

Tax Rate - NA

Distribution (MCA) - 17-3-1003

Enabling Act, Sections 11 & 17

Other (MCA) – DNRC trust land administration diversion (77-1-109)

DNRC timber sale program diversion (77-1-613)

DNRC land bank administration diversion (77-2-362)

DNRC resource development diversion (77-1-607)

DNRC commercial lease diversion (77-1-905)

Applicable Tax Rate(s): N/A

**Distribution:** Interest and income from the trust, net of amounts to fund DNRC administration, is allocated to the Department of Corrections for support of the Pine Hills youth correctional facility.

### Distribution Chart:

Collection Frequency: Monthly

% of Total General Fund Revenue: N/A

### Revenue Estimate Methodology:

The estimate for interest and income from the Pine Hills trust is conducted with the goal of deriving the <u>net</u> amount of revenue that will be distributed to the trust beneficiary. This means that in addition to estimating the various distributable revenues from the

Revenue Estimate Profile

### **Pine Hills Interest and Income**

capital land grant trust, estimates of the various diversions that reduce the amount of distributable revenue must also be estimated. Therefore, the estimated amounts shown for this revenue source are not total revenues, but are net of diversions. Permanent revenue (revenue that is not distributed, but remains in the trust such as from timber and mineral royalties), is estimated as part of the entire Trust and Legacy account (T & L) and earnings are portioned to this trust according to the number of shares owned.

#### Data

Data from SABHRS provide a history of each individual interest and income revenue component from which estimates can be made. Department of Natural Resources and Conservation (DNRC) annual reports provide additional information such as mineral prices and production and timber estimates. Budget submissions on the state budgeting system (MBARS) provide anticipated amount of diversions.

### **Analysis**

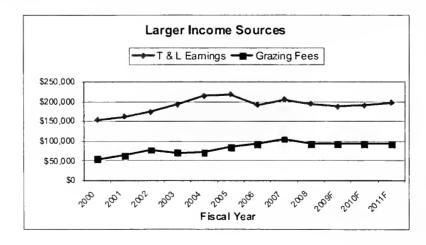

The estimate is derived by first estimating the distributable revenue components and then estimating the amounts of the diversions.

### Revenue Components

- 1. Trust and Legacy Earnings (see the figure below) The monetary assets of the trust are pooled with monetary assets of other land trusts in the T & L and invested by the Board of Investment in the trust funds bond pool. Based on the number of share each trust owns, a share of the earnings is deposited in each trust. For the Pine Hills trust, the actual FY 2008 share percentage of 0.77 is used. The estimation of the total pool earnings is a three stage process:
  - Earnings from new deposits New deposits in the pool are estimated to be in \$1.6 million in FY 2009, \$8.5 million in FY 2010 and \$22.6 million in FY 2011. This additional money initially earns interest at the short-term rate (1.5 percent in FY 2009, 1.7 percent in FY 2010, and 3.2 percent in FY 2011) before it is invested in a longer term investment (5.5 percent in FY 2009, 5.5 percent in FY 2010, and 5.7 percent in FY 2011).
  - Earnings from existing balance The pool balance in FY 2008 was \$439.2 million. The majority of these funds have been invested in bonds purchased over the past several year and average a return rate of 5.6 percent.
  - Non-portfolio earnings Money not invested in the trust funds bond pool earns interest at the short-term rate of 1.7 in FY 2009, 2.0 percent in FY 2010, and 4.0 percent in FY 2011 on a balance of \$2.5 million, the actual balance from FY 2008.

Once the total amount of the pool earnings has been estimated by summing the above three items, the Pine Hills trust share of 0.77 percent is applied.

2. Grazing Fees – Rates are tied to the price of cattle. Cattle prices are expected to be close to those experienced in FY 2008, perhaps slightly less. DNRC personnel anticipate the grazing fee revenue will be similar to FY 2008.

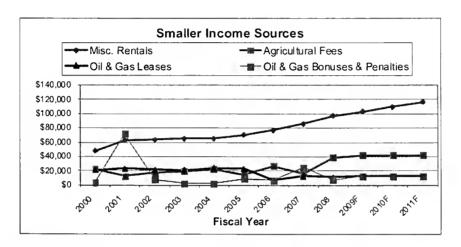

3. Miscellaneous Rentals - These are small income components that are combined and estimated together. For each fiscal year estimated, the estimate is based on the growth rate between FY 2002 and FY 2008.

Revenue Estimate Profile

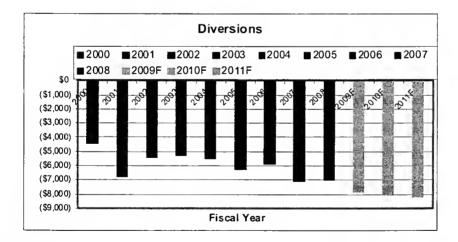

## **Pine Hills Interest and Income**

- 4. Agricultural Fees Fees are based on a crop share basis. Commodity prices are expected to be higher than FY 2008 resulting in greater returns. DNRC personnel anticipate that overall revenue will be about \$1.0 million more than FY 2008 levels (see the figure below). Based on this information, revenues are increased in FY 2009 and remain constant through FY 2010 and FY 2011.
- 5. Oil & Gas Leases For each fiscal year estimated, the estimate is the average of the previous three years.
- 6. Oil & Gas Bonuses & Penalties No revenue was received in FY 2008. This is continued into the future.

### Diversions

Diversions fund operational costs in DNRC, but reduce the amount of revenue distributed to the trust beneficiaries (see the figure below). To determine future diversion amounts, DNRC's present law budget amounts are used. The only diversion that affects distributable revenue is the three percent of all income from the trust that is diverted to an account to fund resource development on the trust lands.

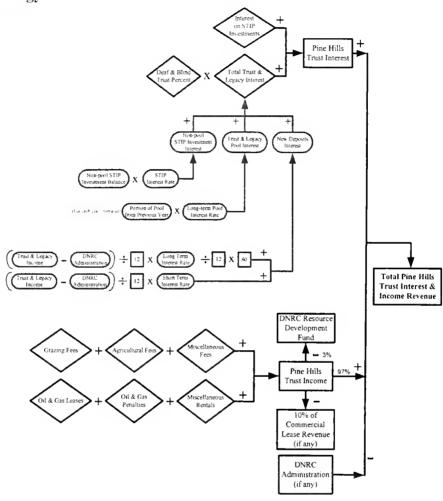

### Adjustments and Distribution

Once total revenue and total diversions have been estimated, the net amounts are distributed 100 percent to the state special revenue fund.

Revenue Estimate Profile

### **Regional Water Trust Interest**

Revenue Description: The 1999 legislature (Senate Bill 220) created the Treasure State Endowment (TSE) Regional Water System Fund within the permanent coal tax trust fund. The fund receives 12.5 percent of total coal severance tax collections through June 2016. Interest earned on the fund is used to provide matching funds to plan and construct regional drinking water systems in Montana and fund state and local entity administrative expenses. Except for administrative expenses, each state dollar must be matched equally by local funds. The funds in the account are further restricted to finance regional drinking water systems from the waters of the Tiber reservoir and the Missouri River within specific geographic areas. The deposit of coal severance tax revenue to this fund terminates the end of fiscal 2016.

#### **Statutory Reference:**

Tax Rate – NA
Distribution (MCA) – 17-5-703 (4b); use of earnings (90-6-715)
Date Due (MCA) – monthly (17-5-703(4d))

Applicable Tax Rate(s): NA

**Distribution:** Interest earnings are deposited to a state special revenue fund and appropriated to the Department of Natural Resources and Conservation to fund eligible projects and pay administrative expenses.

#### Distribution Chart:

Collection Frequency: Monthly

% of Total General Fund Revenue: N/A

#### Revenue Estimate Methodology:

#### Data

The data used to estimate interest earnings from the regional water trust are obtained from the Board of Investments (BOI), Global Insight, and the state accounting system (SABHRS). The BOI provides information on historic interest rates as well as the gains and losses from the sale of securities. Projections of future interest rates are provided by Global Insight and historic interest collections are obtained from SABHRS.

#### Analysis

The regional water trust was created from distributions of the coal severance tax. The regional water trust was formed in 2000 as a sub-trust to the permanent coal trust. The Constitution requires that 50 percent of the coal severance tax collections be distributed to the coal trust, and 25 percent of that distribution (after the water bond debt service obligation is met) or 12.5 percent of total coal severance tax revenues is distributed to the regional water trust. The principal or corpus of the regional water trust now stands at \$44.0 million. Estimates of future deposits to the trust are developed in the coal severance tax projection and are expected to be \$5.3 million in fiscal 2009, \$5.7 million in fiscal 2010, and \$6.0 million in fiscal 2011.

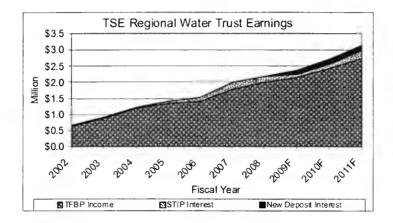

Revenue Estimate Profile

### **Regional Water Trust Interest**

To forecast the regional water trust interest earnings, each of three interest/income components are estimated independently and combined. The estimated interest/income components include:

- Trust fund bond pool (TFBP)
- Short-term investment pool (STIP)
- New trust deposits

The TFBP was formed in 1995 to manage the fixed investments held in the state's major trust funds. Each trust owns "shares" of the pool and interest earnings are paid to each trust on a per-share basis. TFBP earnings are the largest source of earnings for the trust, as shown in the figure below. To estimate TFBP earnings, the base year (fiscal 2008) rate of return generated by the pool, as reported by the BOI, is adjusted during the forecast period for maturing securities. The applicable long-term rate for these securities is based on an average of four long-term rates projected by Global Insight. The fiscal year average long-term interest rate is expected to be 5.5 percent in fiscal years 2009 and 2010 and 5.7 percent in fiscal year 2011.

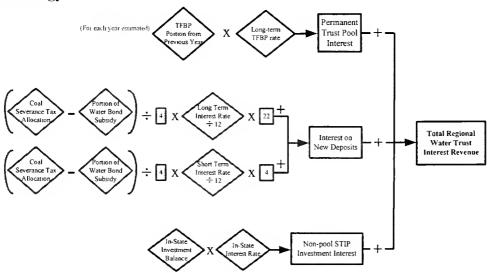

STIP interest (including other interest) is earned on cash, prior to investment in long-term investments. Funds are acquired from new deposits and/or maturing securities forecast period. Funds are held in STIP until the BOI determines that conditions are favorable for investment in the TFBP. To estimate future STIP earnings, an average short-term interest rate is developed, based on Global Insight projections of three short-term investments. The average of these rates is then converted to a fiscal year basis. The average fiscal year short-term interest rate is expected to be 1.5 percent in fiscal year 2009, 1.7 percent in fiscal year 2010, and 3.2 percent in fiscal year 2011.

Coal severance tax distributions to the regional water trust are considered new deposits. New deposits are transferred to the trust on a quarterly basis. When the BOI receives the coal tax transfer, the funds are immediately invested in STIP. Funds are expected to remain in STIP for one month before being invested in the TFBP. The interest earned on new deposits is estimated by summing STIP earnings for one month with TFBP earnings for the remainder of the year.

Revenue Estimate Profile

### **Resource Indemnity Trust Interest**

**Revenue Description:** Article IX, Section 2 of the Montana Constitution and Title 15, Chapter 38, MCA, requires that certain resource extraction taxes, as determined by the legislature, be placed in a trust. The principal of the Resource Indemnity Trust (RIT) "shall forever remain inviolate in an amount of one hundred million dollars (\$100,000,000), guaranteed by the state against loss or diversion." Once the principal of the trust reaches \$100.0 million, any additional tax deposits may be appropriated. Interest earnings on the RIT are to be spent to improve the total environment and rectify damage to the environment. It is also the legislature's intent that the use of interest earnings for operations of state government be minimized.

On July 1, 2002 the Governor by executive order certified to the Secretary of State that the RIT balance had reached \$100 million. In prior years, the RIT had received revenue from the resource indemnity and ground water assessment tax and the oil and gas tax. Because these allocations of revenue are no longer deposited to the trust, the trust balance will remain constant and interest earnings will be dependent only on the interest rates.

#### **Statutory Reference:**

Tax Rate – NA
Distribution (MCA) – Montana Constitution, Article IX, Section 2; 15-38-202(2), use of earnings (15-38-203)
Date Due – NA

#### Applicable Tax Rate(s): N/A

**Distribution:** Statute allocates RIT interest earnings in the following manner:

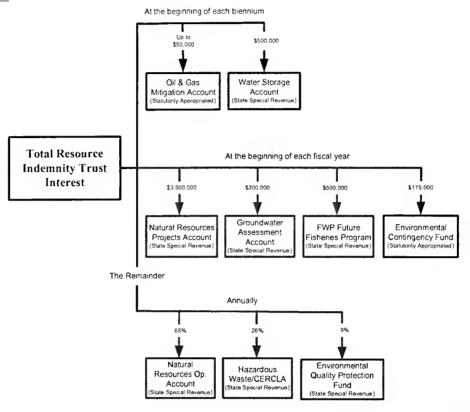

- 1) at the beginning of the biennium, an amount not to exceed \$50,000 to the oil and gas mitigation account to bring the balance up to \$200,000. Money in this account is statutorily appropriated to the Board of Oil and Gas Conservation for the cost of plugging wells that have been abandoned and for which no responsible party can be found;
- 2) at the beginning of the biennium, \$500,000 to the water storage state special revenue account to provide loans and grants for water storage projects;
- 3) \$3.5 million annually to the natural resources projects state special revenue account for distribution as grants;
- 4) \$300,000 annually to the ground water assessment account to improve ground water management and protection;
- 5) \$500,000 annually to the future fisheries program for bull trout and cutthroat trout recovery;
- 6) \$175,000 annually to the environmental contingency fund which is statutorily appropriated upon authorization of the Governor for unanticipated public needs arising from certain disasters and emergencies [and for natural resource restoration (valid only for the 2009 biennium)]; and
- 7) of the remaining RIT interest earnings: a) 65 percent to the natural resources operations state special revenue account for program and administrative costs; b) 26 percent to the hazardous waste/CERCLA state special revenue account for superfund activities; and c) 9.0 percent to the environmental quality protection state special revenue fund for additional clean-up activities.

The Department of Natural Resources and Conservation administers two of the RIT interest accounts which are used for grants, loans, and administrative costs: the renewable resource grant and loan program account and the reclamation and development grant account. These accounts also receive funding from other sources. All grants and loans made from these accounts require legislative approval. Grants must also be appropriated.

Revenue Estimate Profile

### **Resource Indemnity Trust Interest**

#### Distribution Chart:

Collection Frequency: Monthly

% of Total General Fund Revenue: N/A

#### **Revenue Estimate Methodology:**

#### Data

The data used to estimate interest earnings from the resource indemnity (RIT) trust are obtained from the Board of Investments (BOI), Global Insight, and the state accounting system (SABHRS). The BOI provides information on historic interest rates as well as the gains and losses from the sale of securities. Projections of future interest rates are provided by Global Insight and historic interest collections are obtained from SABHRS.

#### **Analysis**

The RIT trust, formed in the mid 1970's, was created from distributions of the resource indemnity and ground water assessment tax (RIGWA) and the oil and gas tax. The resource indemnity trust reached its constitutionally required principal of \$100 million in fiscal 2002. As a result, the trust no longer receives new income from tax distributions. The principal or corpus of the resource indemnity trust now stands at \$100.0 million, as shown by the line in the figure below. No new deposits are anticipated for the trust.

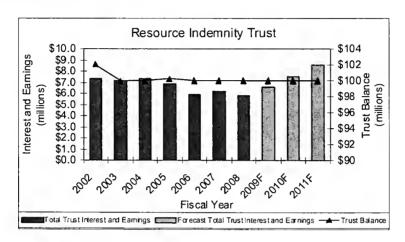

To forecast the resource indemnity trust interest earnings, each of three interest/income components are estimated independently and combined. The estimated interest/income components include:

- Trust funds bond pool (TFBP)
- Short-term investment pool (STIP)
- New trust deposits (if anticipated)

Revenue Estimate Profile

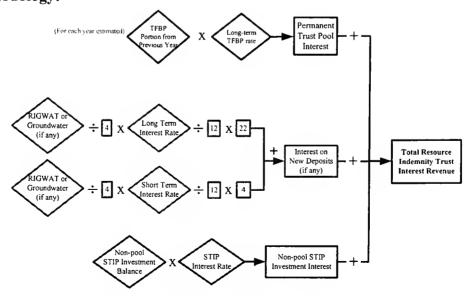

### **Resource Indemnity Trust Interest**

The TFBP was formed in 1995 to manage the fixed investments held in the state's major trust funds. Each trust owns "shares" of the pool and interest earnings are paid to each trust on a per-share basis. TFBP earnings are the largest source of earnings for the trust, as shown in the figure below. To estimate TFBP earnings, the base year (fiscal 2008) rate of return generated by the pool, as reported by the BOI, is adjusted during the forecast period for maturing securities. The applicable long-term rate for these securities is based on a two-year average of four long-term rates projected by Global Insight. The fiscal year long-term rate is estimated to be 5.5 percent, 5.5 percent, and 5.7 percent for fiscal years 2009 through 2011, respectively. The applicable rates are multiplied by the trust balance to determine earnings.

STIP interest (including other interest) is earned on cash, prior to investment in long-term investments. Funds are acquired from new deposits and/or maturing securities in the forecast period. Funds are held in STIP until the BOI determines that conditions are favorable for investment in the TFBP. To estimate future STIP earnings, an average short-term interest rate is developed, based on Global Insight projections of three short-term investments. The average of these rates is then converted to a fiscal year basis. Because no new deposits are anticipated for the trust, STIP earnings are projected for only non-pool balances estimated at the FY 2008 amount.

Revenue Estimate Profile

#### **Tobacco Trust Interest**

Revenue Description: Due to passage of Montana Constitutional Amendment 35 by the electorate in November 2000, the legislature is required to dedicate not less than 40 percent of tobacco settlement money to a permanent trust fund. Initially, the legislature did not determine the exact percentage to be deposited to the trust fund, the revenue estimate assumes 40 percent. Since the passage of Initiative 146 by the electorate in November 2002, 32 percent of the tobacco settlement money is to fund tobacco prevention and 17 percent is to fund the Children's Health Insurance Program. As amended in SB 485 by the 2003 legislature, money from these allocations can also be used to fund human services programs and to match federal Medicaid funds through fiscal 2005. The remaining 11 percent of the money is deposited to the general fund. Interest earnings from the trust can only be used for tobacco disease prevention programs and programs providing benefits, services, or coverage that are related to the health care needs of Montanans. HB 743 enacted by the 2007 Legislature added chronic disease programs to the definition of tobacco disease prevention programs. The earnings cannot be used to replace state or federal money used to fund tobacco disease prevention programs and state programs that existed on December 31, 1999, providing benefits, services, or coverage of the health care needs of Montanans.

#### **Statutory Reference:**

Tax Rate - NA

Distribution (MCA) - Montana Constitution Article XII, Section 4; 17-6-601; 17-6-603

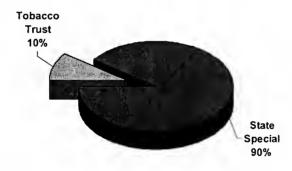

Date Due – Interest deposits are mostly made monthly, but none in July and two in June

#### Applicable Tax Rate(s): NA

**Distribution:** Interest earnings from the trust fund are distributed:

- 90 percent to a state special revenue account for appropriation by the legislature for disease prevention programs (include chronic disease programs) and state programs providing benefits, services, or coverage that are related to the health care needs of the people of Montana; and
- 2. 10 percent to the tobacco settlement trust fund.

Collection Frequency: Trust interest earnings are deposited monthly to the state special revenue account and the trust.

% of Total General Fund Revenue: N/A

Revenue Estimate Profile

#### **Tobacco Trust Interest**

#### **Revenue Estimate Methodology:**

#### Data

The data used to estimate interest earnings from the tobacco settlement trust are obtained from the Board of Investments (BOI), Global Insight, and the state accounting system (SABHRS). The BOI provides information on historic interest rates as well as the gains and losses from the sale of securities. Projections of future interest rates are provided by Global Insight and historic interest collections are obtained from SABHRS.

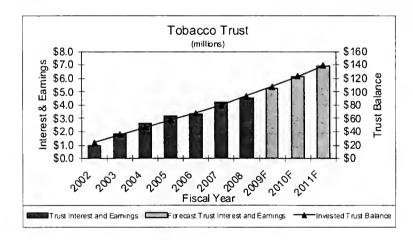

#### Analysis

The tobacco settlement trust, formed in 2000, was created from distributions of the tobacco settlement funds. In 2000, as required by constitutional amendment, the state began depositing 40 percent of the tobacco settlement funds into a trust. As required in statute, ten percent of the trust earnings must be deposited in the trust. The principal or corpus of the tobacco trust now stands at \$93.3 million, as shown by the line in the figure below. New deposits are expected to be \$14.9 million in fiscal 2009, \$15.1 million in fiscal 2010, and \$15.4 million in fiscal 2011.

To forecast the tobacco settlement trust interest earnings, each of three interest/income components are estimated independently and combined. The estimated interest/income components include:

- Trust funds bond pool (TFBP)
- Short-term investment pool (STIP)
- New trust deposits

The TFBP was formed in 1995 to manage the fixed investments held in the state's major trust funds. Each trust owns "shares" of the pool and interest earnings are paid to each trust on a per-share basis. TFBP earnings are the largest source of earnings for the trust, as shown in the figure below. To estimate TFBP earnings, the base year (fiscal 2008) rate of return generated by the pool, as reported by the BOI, is adjusted during the forecast period for maturing securities. The applicable new long-term rate for these securities is based on an average of four long-term rates projected by Global Insight. The fiscal year average long-term interest rate is expected to be 5.5 percent in fiscal years 2009 and 2010 and 5.7 percent in fiscal year 2011.

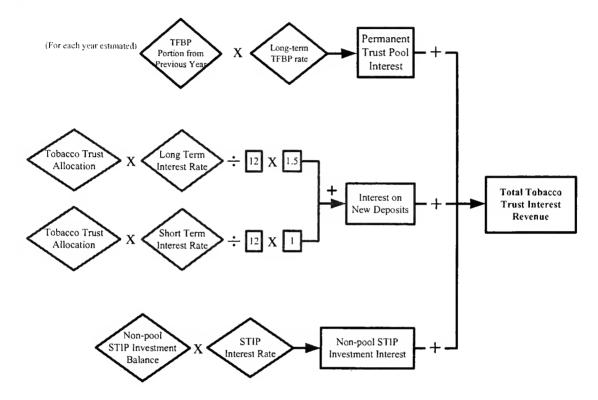

STIP interest (including other interest) is earned on cash, prior to investment in long-term investments. Funds are acquired from new deposits and/or maturing securities in the forecast period. Funds are held in STIP until the BOI determines that conditions are favorable for investment in the TFBP. To estimate future STIP earnings, an average short-term interest rate is developed, based on Global Insight projections of three short-term investments. The average of these rates is then converted to a fiscal year basis. The average fiscal year short-term interest rate is expected to be 1.5 percent in fiscal year 2009, 1.7 percent in fiscal year 2010, and 3.2 percent in fiscal year 2011.

Revenue Estimate Profile

#### **Tobacco Trust Interest**

The 40 percent distribution of tobacco settlement funds and 10 percent of retained interest earnings are considered new deposits in the tobacco settlement trust. New deposits are transferred to the trust on a quarterly basis. When the BOI receives the tobacco settlement funds, they are immediately invested in STIP. Funds are expected to remain in STIP for one month before being invested in the TFBP. The interest earned on new deposits is estimated by summing STIP earnings for one month with TFBP earnings for the remainder of the year.

Revenue Estimate Profile

### **Treasure State Endowment Trust Interest**

Revenue Description: In the June 1992 election, voters approved a referendum to create the Treasure State Endowment Fund (TSEF) within the permanent coal tax trust fund. The TSEF received a \$10.0 million grant from the permanent trust principal in fiscal 1994 and received 37.5 percent of total coal severance tax collections from July 1999 through June 2003. Beginning fiscal 2004, the trust receives 25 percent of total collections. Interest earned on the TSEF is used to finance local infrastructure projects, as prioritized by the departments of Commerce and Natural Resources and Conservation and authorized by the legislature via the Treasure State Endowment Program (TSEP).

#### **Statutory Reference:**

Tax Rate – NA Distribution (MCA) – 17-5-703 (4c); use of earnings (90-6-701(2)) Date Due (MCA) – Monthly (17-5-703 (4c))

Applicable Tax Rate(s): N/A

**Distribution:** Interest earnings are allocated to the Department of Commerce to fund TSEP.

Distribution Chart:

State Special Revenue Fund

Collection Frequency: Monthly

% of Total General Fund Revenue: N/A

#### **Revenue Estimate Methodology:**

#### <u>Data</u>

The data used to estimate interest earnings from the treasure state endowment (TSE) trust is obtained from the Board of Investments (BOI), Global Insight, and the state accounting system (SABHRS). The BOI provides information on historic interest rates as well as the gains and losses from the sale of securities. Projections of future interest rates are provided by Global Insight and historic interest collections are obtained from SABHRS.

#### Analysis

The TSE trust was created from distributions of the coal severance tax. The TSE trust was formed early in the 1990's as a subtrust to the permanent coal trust. The Constitution requires that 50 percent of the coal severance tax collections be distributed to the coal trust, and 50 percent of that distribution (after the water bond debt service obligation is met) or 25 percent of total coal severance tax revenues is distributed to the TSE trust. The principal or corpus of the TSE trust now stands at \$173.2 million. The estimates of future deposits to the TSE trust are developed in the coal severance tax projection and are expected to be \$10.7 million in fiscal 2009, \$11.5 million in fiscal 2010, and \$11.9 million in fiscal 2011.

To forecast the TSE trust interest earnings, each of four interest/income components are estimated independently and combined. The estimated interest/income components include:

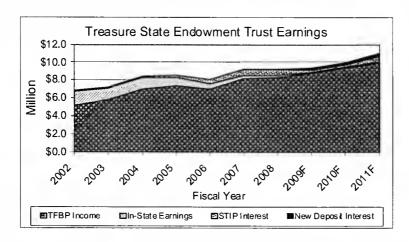

- Trust funds bond pool (TFBP)
- In-state investments

Revenue Estimate Profile

#### **Treasure State Endowment Trust Interest**

- Short-term investment pool (STIP)
- New trust deposits

The TFBP was formed in 1995 to manage the fixed investments held in the state's major trust funds. Each trust owns "shares" of the pool and interest earnings are paid to each trust on a per-share basis. TFBP earnings are the largest source of earnings for the trust, as shown in the figure below. To estimate TFBP earnings, the base year (fiscal 2008) rate of return generated by the pool, as reported by the BOl, is adjusted during the forecast period for maturing securities. The applicable new long-term rate for these securities is based on an average of four long-term rates projected by Global Insight. The fiscal year average long-term interest rate is expected to be 5.5 percent in fiscal years 2009 and 2010 and 5.7 percent in fiscal year 2011.

As seen in the figure above, earnings from in-state investments have historically been the second largest source of income to the TSE trust. The BOI is required by statute to invest twenty-five percent of coal tax trust in the Montana economy. Investments must be made to maximize the long-term benefit to the Montana economy. In-state investments primarily consist of loans to Montana business entities and earnings are equal to the interest charged on the loans. In the 2011 biennium, the loan rate is substantially lower than past years, 4.9 percent.

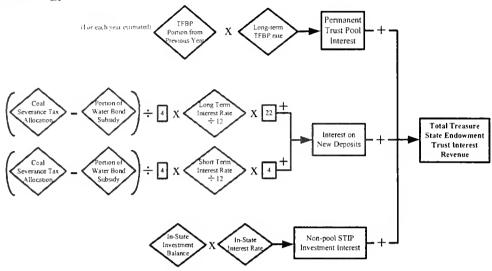

STIP interest (including other interest) is earned on cash, prior to investment in long-term investments. Funds are acquired from new deposits and/or maturing securities in the forecast period. Funds are held in STIP until the BOI determines that conditions are favorable for investment in the TFBP. To estimate future STIP earnings, an average short-term interest rate is developed, based on Global Insight projections of three short-term investments. The average of these rates is then converted to a fiscal year basis. The average fiscal year short-term interest rate is expected to be 1.5 percent in fiscal year 2009, 1.7 percent in fiscal year 2011,

Coal severance tax distributions to the TSE trust are considered new deposits. New deposits are transferred to the trust on a quarterly basis. When the BOI receives the coal tax transfer, the funds are immediately invested in STIP. Funds are expected to remain in STIP for one month before being invested in the TFBP. The interest earned on new deposits is estimated by summing STIP earnings for one month with TFBP earnings for the remainder of the year.

#### **Treasure State Endowment Trust Interest**

#### **Revenue Projection:**

Data Source(s): Board of Investments, SABHRS, Wall Street Journal, Global Insight

Contacts: Department of Commerce and Department of Natural Resources and Conservation

Revenue Estimate Profile

### **Treasury Cash Account Interest**

Revenue Description: The Department of Commerce, Board of Investments is responsible for investing all state funds. Title 17, Chapter 6, MCA, provides guidelines under which the funds must be invested. Unless specifically stated by statute, all interest earned on these investments is deposited in the general fund. Treasury cash is invested in a mixture of short and medium-term investments. Consequently, the interest assumptions adopted by the legislature incorporate a blend of short and intermediate-term rates. When needed to address cash flow problems, the state typically issues tax and revenue anticipation notes (TRANS). The legislature would then adopt TRANS issuance assumptions, since this affects the average invested balance. No TRANS issues are anticipated in the 2009 or 2011 biennia.

#### **Statutory Reference:**

Tax Rate - NA

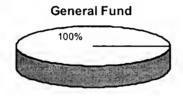

Distribution (MCA) -17-6-202(2)

Date Due - interest deposits are mostly made monthly, with two in June and none in July

Applicable Tax Rate(s): N/A

**Distribution:** All investment earnings on the treasury cash account (TCA) are deposited into the general fund.

#### Distribution Chart:

Collection Frequency: On-going

#### % of Total General Fund Revenue:

FY 2004 – 0.46% FY 2007 – 1.85% FY 2005 – 0.66% FY 2008 – 1.57%

FY 2006 - 1.09%

#### **Revenue Estimate Methodology:**

Excess cash in the state treasury is deposited to the treasury cash account (TCA) and invested in short and medium-term investments. Earnings are dependent on the investable cash balance and interest rates. Investment earnings are deposited to the general fund.

#### Data

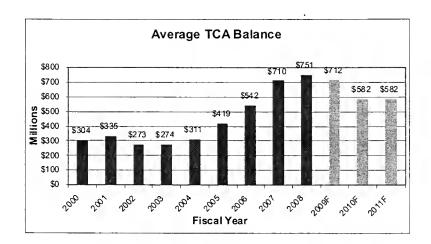

The Board of Investments provides monthly reports on the treasury cash account balance. The state accounting system (SABHRS) provides information on monthly investment earnings.

#### Analysis

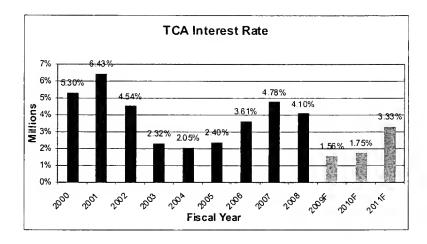

The average balance of the TCA is estimated by increasing the previous year's balance by half the difference between the
anticipate general fund balances for the past and current years. When cash flow is insufficient, tax revenue anticipation
notes (TRANS) are issued to meet short-term cash flow needs. The term of the loan and amount borrowed are used to
determine the amount to be added to the average balance calculations. No TRANS are anticipated for FY 2009 -2011.

Revenue Estimate Profile

### **Treasury Cash Account Interest**

Short-term interest rates are estimated by first deriving a composite rate of Global Insight forecasts for the 3-month commercial paper, 3-month treasury bill, and 6-month treasury bill rates. A ratio is then developed of the sum of average TCA rate for FY 2006-FY 2008 to sum of the composite rate for the same years. The ratio is then multiplied by the composite rate for the applicable year.

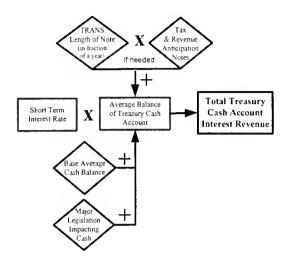

#### Adjustments and Distribution

Once total revenue for each fiscal year is determined, the applicable distribution percentage, 100 percent to the general fund, is applied.

#### Revenue Estimate Profile

#### **Beer Tax**

**Revenue Description:** A tax is levied on each barrel of beer (31 gallons) produced in or imported into Montana based on the amount produced. A portion of the revenue from the beer tax is returned to Indian tribes per an agreement between the Department of Revenue and the tribes.

#### **Statutory Reference:**

Tax Rate (MCA) – 16-1-406

Distribution (MCA) – 16-1-406

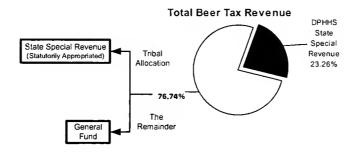

Date Due – end of the month and collected in the next month (16-1-406(2))

#### **Applicable Tax Rate(s):** The per barrel tax varies based on barrels of production:

up to 5,000 barrels - \$1.30 5,001 to 10,000 barrels - \$2.30 10,001 to 20,000 barrels - \$3.30 over 20,000 barrels - \$4.30

**Distribution:** Beer tax revenue is distributed 76.74 percent to the general fund and 23.26 percent to the DPHHS state special revenue alcohol account. The general fund portion is reduced by the amount of the tribal distribution.

#### Distribution Chart:

#### Collection Frequency: Monthly

#### % of Total General Fund Revenue:

FY 2004 – 0.21% FY 2007 – 0.17% FY 2005 – 0.19% FY 2008 – 0.16% FY 2006 – 0.17%

#### **Revenue Estimate Methodology:**

#### Data

To create the beer estimate, data are obtained from the Department of Revenue (DOR) and the state accounting system (SABHRS). The DOR provides the details of taxes paid at each of the four incremental tax rates and information on tribal distributions. SABHRS shows total fiscal year tax collections.

DOR provides data detailing the tax paid at each of the four tax rates. A more accurate calculation of the number of barrels of beer taxed in each fiscal year can be produced using the detailed data. Because the beer tax rate is applied incrementally based on the number of barrels each brewer produces in a year, the number of barrels taxed each year cannot be accurately determined without this information.

#### Revenue Estimate Profile

#### **Beer Tax**

The DOR data are used to determine a "proxy" for barrels of beer consumed in Montana. Besides providing the means to measure the taxable barrels of beer sold by wholesalers and producers in Montana, DOR data are used to develop an effective tax rate. The effective rate is created with a weighted average of beer sales by tax rate. The calculation for the weighted average effective rate is as follows:

ETR = 
$$(Rate_{54,30} * \%Taxed_{54,30}) + (Rate_{53,30} * \%Taxed_{53,30}) + (Rate_{52,30} * \%Taxed_{52,30}) + (Rate_{51,30} * \%Taxed_{51,30})$$
  
Where:

ETR is the effective tax rate.

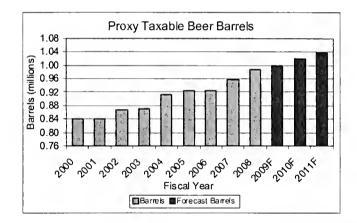

In the estimated period, the effective tax rate is \$4.20 per barrel.

SABHRS data are used in conjunction with the DOR data to derive the number of taxable barrels sold in the state. To calculate taxable barrels, the total tax collected in each fiscal year is divided by the effective tax rate.

#### Analysis

Analysis of the beer data shows a constant trend for taxable barrels sold in Montana, as demonstrated in the figure below. Consequently, the proxy of taxable barrels sold is regressed in a linear trend model to determine the future taxable barrels of beer that will be sold in Montana. The trend is based on the series of proxy barrels beginning in fiscal 1997.

The statistics of fit show that a linear trend accurately measures the rate of growth in the number of taxable barrels of beer sold in Montana. The model provides an R<sup>2</sup> rating of 0.976. This means that the linear trend explains 97.6 percent of the variability of the number of barrels sold in Montana, when all other impacts are held constant.\* The model provides a rate of growth of 19,418 barrels per fiscal year.

The rate of growth developed in the trend model is 5.48 percent annually. The rate of growth is applied to the most recent actual fiscal year data available, or base year fiscal 2006. As seen in the figure above, the projection for beer consumed in Montana is 998,720 barrels, 1,018,138 barrels, and 1,037,556 barrels for fiscal years 2009 through 2011, respectively. Finally, the effective tax rate is applied to the proxy of barrels developed above. This step produces total tax estimates of \$4.2 million in fiscal 2009, \$4.3 million in fiscal 2010, and \$4.4 million in fiscal 2011.

#### Adjustment and Distribution

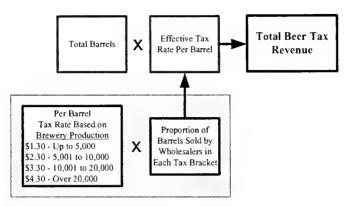

The last step in producing the estimate for beer tax collections is to calculate the tax distributions. Beer taxes are distributed between two funds, the general fund, 76.74 percent, and the Department of Health and Human Services alcohol state special revenue account, 23.26 percent. Finally, the general fund distribution is reduced by tribal reimbursements. At this time, three of the seven tribal governments receive beer tax dollars, Blackfeet, Fort Belknap, and Fort Peck. These tribal governments adhere to the Montana beer tax laws. The state of Montana collects the tribes' portion of the beer tax and quarterly distributes those collections based on a formula (per capita beer consumption times tribal membership times the Montana tax rate).

<sup>\*</sup>For additional information concerning the statistics of fit for the model used for this projection, contact the Legislative Fiscal Division.

#### Revenue Estimate Profile

### **Cigarette Tax**

Revenue Description: The cigarette tax is an excise tax imposed on all cigarettes sold or possessed in Montana. The tax is imposed on the retail consumer, but is collected by wholesalers or retailers through the use of tax insignia. The insignias are purchased from the state and affixed to each package of cigarettes. The tax does not apply to quota cigarettes sold on an Indian reservation. In practice, the tax is levied on all cigarettes and the wholesaler receives a refund for the amount within the quota that has been sold within the boundaries of an Indian reservation. Each tribe's quota is equal to 150.0 percent of Montana's per capita general fund cigarette tax revenue multiplied by the enrolled tribal member population, or any other amount agreed to in a state-tribal agreement. The state has agreements with five tribes in Montana.

Beginning May 1, 2003, the Fifty-eighth Legislature passed SB 407 increasing the tax on cigarettes to \$0.70 per 20-cigarette package, a 289 percent increase from the previous \$0.18 tax. Shortly thereafter, the electorate approved I-149 that raised the tax on packs of 20 cigarettes by \$1.00 to \$1.70, beginning January 1, 2005, an increase of 143 percent. Both SB 407 and I-149 changed the distributor percentage discounts, but the amounts that distributors are allowed to retain for administration of the tax stayed relatively constant. SB 407 changed the distribution of the tax revenues to increase the amount deposited into the state general fund. I-149 increased tax revenues for veterans' nursing home operation and maintenance and provided revenue to a new state special revenue fund for health and Medicaid initiatives.

Note: If the money in the veteran's cigarette account at the end of a fiscal year exceeds \$2.0 million, after reductions for budgeted present law amounts for each fiscal year, the excess is transferred to the general fund as a revenue transfer to the "All Other Revenues" source.

#### **Statutory Reference:**

Tax Rate (MCA) – 16-11-111
Tax Distribution (MCA) – 16-11-119
Date Due – within 30 days after purchase of the insignia (16-11-117)

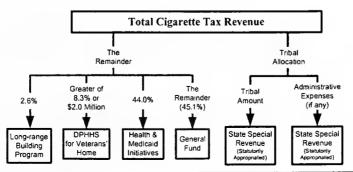

#### Applicable Tax Rate(s):

- Beginning January 2005, the excise tax on cigarettes is \$1.70 per package of 20 cigarettes, prorated for packages that differ from 20 cigarettes.
- Wholesalers pay a license fee of \$50.00 and each retailer pays a license fee of \$5.00. License fees are renewable each year and are non-transferable. Revenue from these fees is shown in "All Other General Fund Revenue".

**Distribution:** All wholesaler and retailer license fees are deposited in the general fund. After deductions for tribal refunds, the cigarette tax revenue is distributed:

- The greater of 8.3% or \$2.0 million to DPHHS for veterans' nursing home operation and maintenance
- 2.6% to the long-range building program
- 44.0% for health and Medicaid initiatives
- The remainder (45.1%) to the general fund

FY 2006 - 2.02%

#### Revenue Estimate Methodology:

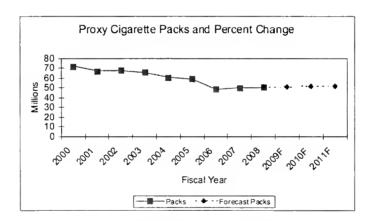

#### Data

Data from the state accounting system (SABHRS) and the Department of Revenue (DOR) are used to forecast cigarette tax revenues. The DOR provides information on the number of cigarette insignias (stamps) sold in each month and the amount of discounts given to cigarette distributors. Historic observations of tax collections are available through SABHRS.

DOR provides detailed information on the sales of tax insignias by pack size, company, Tribal, and month. To prepare the raw data for analysis, the total number of insignia sales is reduced by discounts and refunds given to the distributor. The resulting amount serves as a proxy for the number of taxable cigarette packs consumed in Montana in a year. The actual SABHRS data serves as a check against the number of proxy packs of cigarettes calculated by this method.

#### **Analysis**

In 1982, the consumption of cigarettes began to decrease as a result of an increased awareness of the health risks associated with smoking. Between 1982 and 2002, cigarette consumption decreased at a rate of almost 2 percent annually. Each of the two recent tax increases caused consumption to decrease at a greater rate for two years. These decreases forced downward shifts in Montana's consumption curve. The shifts are evident in the figure below between fiscal years 2003 and 2004, -7.7 percent, and between fiscal years 2005 and 2006, -21.7 percent.

Experts in the field of cigarette consumption find that following the initial consumption response to the price adjustment of a tax increase, the consumption decline should return to the normal pattern. However, cigarette consumption in Montana has rebounded following the initial price related decline. As shown in the figure above, the number of packs consumed increases between fiscal 2006 and fiscal 2008 by a rate of 2.2 percent annually. A portion of the increased consumption might be attributed to heightened efforts to capture the tax on internet sales of cigarettes.

Because of the recent trend in positive growth in cigarette packs consumed, the estimate of taxable cigarette pack sales for the forecast period is calculated by applying a growth rate of 1.0 percent to the base year, fiscal 2008, proxy for taxable packs. The estimates of proxy taxable cigarette packs are 50.8 million, 51.3 million, and 51.9 million for fiscal years 2009 through 2011, respectively. Finally, the current tax rate is applied to the proxy for taxable packs to determine the estimate for gross cigarette tax collections.

Revenue Estimate Profile

### **Cigarette Tax**

#### Adjustment and Distribution

After estimating the gross cigarette tax collections, the estimates are reduced by the discounts and credits passed on to distributors. The last step in producing the estimate for the cigarette tax is to calculate the tax distributions. First, cigarette tax revenue is reduced by tribal distributions. At this time, five of the seven tribal governments receive cigarette tax dollars, Blackfeet, Fort Belknap, Fort Peck, Chippewa Cree, and Crow. These tribal governments adhere to Montana cigarette tax laws. The state of Montana collects the tribes' portion of the tax and quarterly distributes the collections based on a formula (per capita cigarette consumption times tribal membership times the Montana tax rate). Finally, the remaining tax revenues are distributed proportionally to the programs funded with cigarette tax revenues and to the general fund.

## Revenue Estimate Profile

### **Diesel Tax**

**Revenue Description:** The Montana Constitution (Article VIII, Section 6) provides that money from taxes on vehicle fuel be used solely for: 1) payment of obligations incurred for construction, reconstruction, repair, operation, and maintenance of public highways, streets, roads, and bridges; 2) payment of county, city, and town obligations on streets roads, and bridges; and 3) enforcement of highway safety, driver education, tourist promotion, and administrative collection costs. Appropriation of the money for any other use requires a three-fifth vote of each house of the legislature.

There are two sources of revenue associated with the taxation of special fuels (primarily diesel): 1) the main source of revenue is a diesel tax of \$0.2775 per gallon paid to the Department of Transportation (DOT) for every gallon of diesel sold or used in the state; and 2) a tax of \$0.0075 assessed on each gallon of diesel fuel for the purpose of funding petroleum storage tank cleanup.

Distributors are allowed to withhold 1.0 percent of the diesel tax as an allowance for collecting the tax. In order to prevent the possibility of dual taxation of motor fuels purchased by Montana citizens and businesses on Indian reservations, DOT and Indian tribes may enter into a cooperative agreement. Refunds of the tax paid is provided for commercial vehicle use other than for use on public highways and streets, governmental use, and nonpublic school use for the transportation of pupils.

### **Statutory Reference:**

Tax Rate (MCA) - 15-70-321(2), 75-11-313 (storage tank cleanup) Tax Distribution (MCA) - 15-70-101(1), 75-11-314 (storage tank cleanup) Date Due - 25<sup>th</sup> of the following month (15-70-344(1))

### Applicable Tax Rate(s):

- 1. Diesel (Special) Fuel Tax \$0.2775 per gallon
- 2. Petroleum Storage Tank Cleanup Tax \$0.0075

**Distribution:** After reductions for: 1) the 1.0 percent withheld by distributors; 2) administrative expenses and refund amounts deducted by DOT under a tribal agreement (if any) that are deposited in the tribal motor fuels administration account and statutorily appropriated; 3) diesel tax refunds; and 4) amounts refunded through the international fuel tax agreement, diesel tax proceeds are distributed to DOT. Of that amount, 1/4 of \$0.01 per gallon is allocated specifically to the funding of highway system maintenance.

#### **Distribution Chart:**

Collection Frequency: Monthly

% of Total General Fund Revenue: N/A

#### Revenue Estimate Methodology:

#### Data

The data used in the diesel fuel tax estimate are obtained from the state accounting system (SABHRS). The SABHRS data includes a historic series of diesel tax revenues and is used to produce a proxy amount for taxable gallons of diesel sold in Montana.

Total diesel taxes are composed of two distinct taxes, the diesel tax and the diesel petroleum storage tank cleanup tax (imposed to

Revenue Estimate Profile

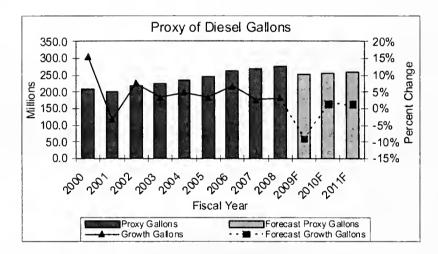

## **Diesel Tax**

cover the cost of storage tank cleanup). Each rate is applied to a proxy for taxable diesel gallons. To create the proxy, the actual tax revenues are increased by refunds and then divided by the "effective tax rate". The effective tax rate is created in recognition of the statutory credit provided to diesel distributors for collection and payment of the tax. Under current law, diesel distributors are allowed to keep 1 percent of the tax on all diesel receipts and must pay 99 percent of the tax receipts to the state. The effective rate for the forecast period is \$0.274725. After calculating the proxy taxable gallons, the data can be analyzed.

### **Analysis**

Diesel fuel taxes are estimated as separate taxes. First, the diesel tax is imposed on each gallon of diesel sold in the state. A second tax is imposed on all diesel fuel distributed in the state for the purpose of diesel storage tank clean-up costs (storage tank tax). The two taxes are applied to different bases, because the diesel fuel tax provides credits against the cost of the tax to consumers who use the diesel "off highway".

Diesel fuel sales may be considered a function of the price per gallon of diesel and are highly susceptible to economic activity. Because diesel fuel sales have been significantly impacted by the dramatic increases in price per-gallon in 2008, diesel fuel consumption has not been consistent with the historic trend. Diesel prices are expected to be volatile over the next three years, and in consideration of the volatility, consumption is expected to decline in the near future, fiscal year 2009, and resume a more normal pattern of growth for the remainder of the upcoming biennium, fiscal years 2010 and 2011. To determine the future consumption of diesel fuel, the change in consumption experienced in fiscal year 2008 is duplicated in fiscal 2009. The growth for fiscal years 2010 and 2011 is developed using an average historic rate of growth. The storage tank tax is expected to follow the same patterns as the diesel fuel tax.

The figure above shows the actual gallons of diesel fuel sold in Montana between fiscal years 2000 and 2008 and the expected sales of diesel fuel for fiscal years 2009 through 2011, along with the expected change between the years. In determining future consumption, the growth rates described above are applied to the base year (fiscal 2008). The results of the method provide an overall average growth in the proxy of diesel fuel gallons consumed in Montana of negative 2.2 percent for each year of the analysis. The same rate of growth is next applied to the base year of the proxy for the storage tank gallons. Finally, the effective diesel fuel tax rates are applied to the estimates to produce the estimate for gross tax revenues.

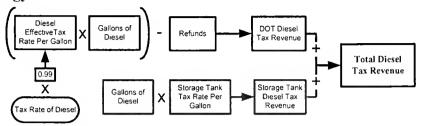

#### Adjustments

Several adjustments are made to the expected gross diesel fuel tax revenues. Gross tax revenues are reduced by refunds, incentives, DOT administrative costs, and tribal agreements, resulting in the estimate for net diesel fuel tax revenue. No adjustments are required for the storage tank tax. Next, the net tax revenues of the two taxes are combined to determine the estimate for total diesel fuel tax revenue. Finally, the tax revenues are distributed to the various state special revenue accounts as described above.

### **Revenue Estimate Methodology:**

#### Data

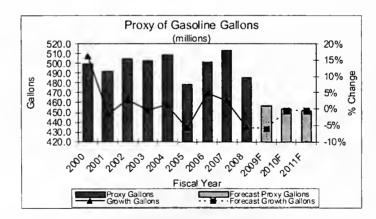

The data used in the gasoline tax estimate are obtained from the state accounting system (SABHRS). The SABHRS data includes a historic series of gasoline tax revenues and is used to produce a proxy amount for taxable gallons of gasoline sold in Montana.

Total gasoline taxes are made up of two distinct taxes, the gasoline tax and the gasoline petroleum storage tank cleanup tax (imposed to cover the cost of storage tank cleanup). Each rate is applied to a proxy for taxable gasoline gallons. To create the proxy, the actual tax revenues are increased by refunds and then divided by the "effective tax rate". The effective tax rate is created in recognition of the statutory credit provided to gasoline distributors for collection and payment of the tax. Under current law, gasoline distributors are allowed to keep 1 percent of the tax on all gasoline receipts and must pay 99 percent of the tax receipts to the state. The effective rate for the forecast period is \$0.2673. After calculating the proxy taxable gallons, the data can be analyzed.

#### **Analysis**

Gasoline taxes are estimated as separate taxes. First, the gasoline tax is imposed on each gallon of gasoline sold in the state. A second tax is imposed on all gasoline distributed in the state for the purpose of gasoline storage tank clean-up costs (storage tank tax). The two taxes are applied to different bases, because the gasoline tax provides credits against the cost of the tax to consumers who use the gasoline "off highway".

Gasoline sales may be considered a function of the price per gallon of gasoline and are highly susceptible to economic activity. Because gasoline sales have been significantly impacted by the dramatic increases in price per-gallon in 2008, gasoline consumption has not been consistent with the historic trend. Gasoline prices are expected to be volatile over the next three years, and in consideration of the volatility, consumption is expected to decline in the near future, fiscal year 2009, and resume a more normal pattern of growth for the remainder of the upcoming biennium, fiscal years 2010 and 2011. To determine the future consumption of gasoline, the change in consumption experienced in fiscal year 2008 is duplicated in fiscal 2009. The growth for fiscal years 2010 and 2011 is developed using an average historic rate of growth. The storage tank tax is expected to follow the same patterns as the gasoline tax.

The figure above shows the actual gallons of gasoline sold in Montana between fiscal years 2000 and 2008 and the expected sales of gasoline for fiscal years 2009 through 2011, along with the expected change between the years. In determining future consumption, the growth rates described above are applied to the base year (fiscal 2008). The results of the method provide an overall average growth in the proxy of gasoline gallons consumed in Montana of negative 2.2 percent for each year of the analysis. The same rate of growth is next applied to the base year of the proxy for the storage tank gallons. Finally, the effective gasoline tax rates are applied to the estimates to produce the estimate for gross tax revenues.

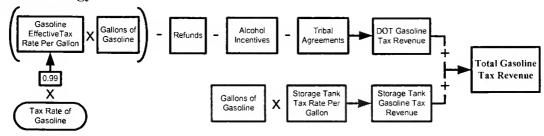

Revenue Estimate Profile

## **Gasoline Tax**

#### Adjustments

Several adjustments are made to the expected gross gasoline tax revenues. Gross tax revenues are reduced by refunds, incentives, DOT administrative costs, and tribal agreements, resulting in the estimate for net gasoline tax revenue. No adjustments are required for the storage tank tax. Next, the net tax revenues of the two taxes are combined to determine the estimate for total gasoline tax revenue. Finally, the tax revenues are distributed to the various state special revenue accounts as described above.

#### Forecast Methodology:

Contacts: Department of Transportation

Revenue Estimate Profile

## **GVW** and Other Fees

Revenue Description: There are two types of revenue derived from over 20 different sources classified under gross vehicle weight (GVW) and other income: fee revenue and permit revenue. The majority of revenue is derived from a variety of GVW fees, including those fees collected by counties when vehicles are registered. Miscellaneous permits comprise the second income component under this source. Enactment of the federal "Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users" replaces the single state registration system (SSRS) with a new uniform carrier registration program. Elimination of the SSRS (effective January 1, 2007) eliminates the \$5 state fee that is deposited to the general fund. The revenue is replaced with revenue from a federal fee. Montana is expected to receive revenue from this fee in the same amount of the lost SSRS revenue.

## **Statutory Reference:**

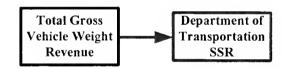

Tax Rate – Multiple (Administrative Rules 18.8.202) Tax Distribution (MCA) – Multiple

Applicable Tax Rate(s): Various

**Distribution:** The majority of GVW revenue is allocated to the Department of Transportation.

Collection Frequency: Various

% of Total General Fund Revenue: 0.00% (the general portion is included in "All Other General Fund")

### Revenue Estimate Methodology:

#### Data

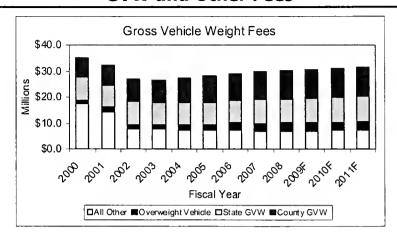

The data used in the gross weight vehicle (GVW) tax estimate are obtained from the state accounting system (SABHRS) and the Department of Transportation (DOT). The SABHRS data provides the historic collection data for the 13 different types of fees and permits. The DOT provides statistics on the number of gross weight vehicle licenses for use in Montana. No adjustments are required on the raw data in preparation for analysis.

#### Analysis

The state of Montana imposes many fees and requires several types of permits based on the gross weight of commercial and large privately owned vehicles. In preparing the GVW estimate, 13 sources of fees and permit revenues are analyzed. Most of the sources demonstrate a payment history that can be adequately measured by applying a growth rate to a base year (fiscal 2006). The largest sources of revenue in the GVW are the gross vehicle weight fees collected by both counties and the state. The figure below demonstrates the relative importance of these two sources to the overall GVW collections.

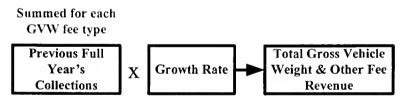

Revenue Estimate Profile

## **GVW and Other Fees**

Both county and state GVW fees are forecast with a compound growth rate and are expected to grow by 1.6 percent over the next biennium. Applying the growth rate to fiscal 2006 revenues, the resulting estimates for county GVW are \$11.0 million in fiscal 2009, \$11.2 million in fiscal 2010, and \$11.4 million in fiscal 2011. The estimates for state GVW are \$9.4 million, \$9.6 million, and \$9.7 million for fiscal 2009 through fiscal 2011, respectively. Another large source of revenue included in the GVW is the fee for overweight vehicles. This fee is estimated with a three-year moving average growth rate. When applied to the base, collections of overweight vehicle fees are expected to be \$3.2 million over the biennium. The all other GVW fees, as shown in the figure above, are a collection of 10 different fees and permit types. While each of these fees is estimated separately, in combination the fees are expected to increase at an annual rate of 1.9 percent during the biennium. When summed, all other fees are expected to be \$7.1 million in fiscal 2009, \$7.2 million in fiscal 2010, and \$7.4 million in fiscal 2011. Finally, the estimates for each of the GWV fees and permit collections are combined to produce the total estimate for GVW fees, \$30.7 million, \$31.2 million, and \$31.7 million in fiscal 2009 through fiscal 2011.

Revenue Estimate Profile

# **GVW** and Other Fees

### Revenue Projection:

Data Source(s): SABHRS, Department of Transportation

Contacts: Department of Transportation

Revenue Estimate Profile

# **Liquor Excise and License Tax**

**Revenue Description:** The Department of Revenue (DOR) is authorized to sell liquor to retail liquor establishments throughout the state. These sales result in profits and taxes that are deposited in various state accounts. An excise tax is collected both on liquor sold by DOR and for liquor purchased outside the state, by airlines and railroads (carriers), for consumption within the state. The department also collects a license tax on the sale of liquor. A portion of the excise tax revenue is returned to Indian tribes through an agreement with the department.

### **Statutory Reference:**

Tax Rate (MCA) – Excise tax (16-1-401), License tax (16-1-404)

Tax Distribution (MCA) – Excise tax (16-1-401 & 16-2-108), License tax (16-1-404)

Date Due – Excise tax is collected at the time of sale and distributed by the 10<sup>th</sup> day of each month. License tax is collected at the time of sale.

### **Applicable Tax Rate(s):**

#### Excise Tax Rate

- 16.0% of the retail selling price on all liquor sold and delivered in the state by a company that manufactured, distilled, rectified, bottled, or processed, and sold more than 200,000 proof gallons of liquor nationwide in the calendar year preceding imposition of the tax
- 13.8% of the retail selling price on all liquor sold and delivered in the state by a company that manufactured, distilled, rectified, bottled, or processed, and sold <u>not more than</u> 200,000 proof gallons of liquor nationwide in the calendar year preceding imposition of the tax

The amount of excise taxes paid by carriers includes additional factors related to departures and passenger miles.

#### License Tax Rate

- 10.0% of the retail selling price on all liquor sold and delivered in the state by a company that manufactured, distilled, rectified, bottled, or processed and that sold more than 200,000 proof gallons of liquor nationwide in the calendar year preceding imposition of the tax
- 8.6% of the retail selling price on all liquor sold and delivered in the state by a company that manufactured, distilled, rectified, bottled, or processed and that sold <u>not more than</u> 200,000 proof gallons of liquor nationwide in the calendar year preceding imposition of the tax

The license tax must be charged and collected on all liquor brought into the state and taxed by DOR. The retail selling price must be computed by adding to the cost of the liquor the state markup as designated by the department. The license tax must be figured in the same manner as the state excise tax and is in addition to the state excise tax.

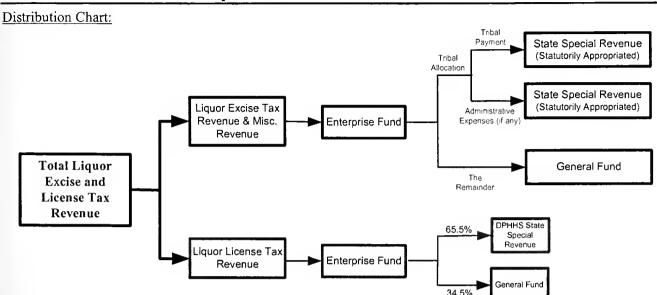

#### Distribution:

Excise tax revenue, less amounts distributed to Indian tribes, is deposited in the enterprise fund for transfer to the general fund.

<u>License tax</u> revenue is allocated to the enterprise fund for transfer 34.5 % to the general fund and 65.5% to the Department of Public Health and Human Services for alcohol treatment and rehabilitation programs.

Revenue Estimate Profile

# **Liquor Excise and License Tax**

**Collection Frequency:** Both the liquor excise tax and the license tax on liquor are collected at the time of the sale and delivery of liquor. Deposits to the general fund are made monthly.

### % of Total General Fund Revenue:

FY 2004 - 0.78%	FY 2007 - 0.76%
FY 2005 – 0.75%	FY 2008 - 0.76%
EX. 0004 0 5404	

FY 2006 - 0.74%

## Revenue Estimate Methodology:

#### Data

To create the liquor excise and the liquor license tax projections, the data are obtained from the Department of Revenue (DOR), Global Insight, and the state accounting system (SABHRS). The DOR data provides the details of monthly liquor sales and costs. Global Insight provides estimates for the change in the consumer price index (CPI), and historic tax revenue data from SABHRS are used to confirm the adequacy of the estimates.

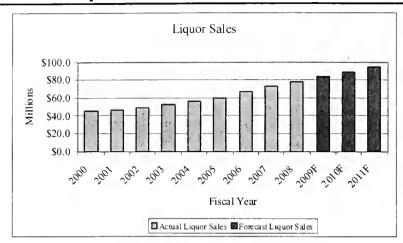

Total liquor taxes are made up of two taxes, an excise tax and a license tax. While each tax has a different rate, both taxes are assessed on the retail sales price of the commodity. The tax rate is lower for companies that produce less than 200,000 gallons. However, for the purpose of estimating future liquor taxes, the tax rates for liquor sales by companies who produce less than 200,000 gallons of liquor are not considered. Consequently, the rate of the excise tax is estimated at 16 percent of the price, and the license tax is estimated at 10 percent of the price.

#### **Analysis**

Analysis shows a constant upward trend in liquor sales in Montana, as shown in the figure below.

Revenue Estimate Profile

# **Liquor Excise and License Tax**

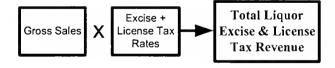

The estimate of liquor taxes is calculated by applying growth rates to base year values of both the amount of liquor units sold and the per unit price of liquor. The expected sales of liquor units are estimated by applying a five-year average growth factor. The annual growth factor for the forecast period is 6.5 percent, annually. The growth rate for the price per liquor unit is estimated using the past year price as the base. This price is adjusted in subsequent years by the change in the CPI, as estimated by Global Insight, adjusted by the long term ratio of the change in the cost of liquor units to the change in the CPI. The calculated growth rates are 2.2 percent in fiscal 2009, 1.3 percent in fiscal 2010, and 1.8 percent in fiscal 2011. When total units and sales per unit are multiplied, total estimated gross liquor sales in Montana are estimated to be \$83.6 million, \$88.8 million, and \$94.6 million for fiscal years 2009 through 2011, respectively. The final step is to apply both tax rates to the estimate of liquor sales to determine the estimate for the combined liquor excise and license taxes.

#### Adjustment and Distribution

The last step in producing the estimate for liquor taxes is to calculate the tax distributions. Liquor taxes are distributed to the general fund after a reduction for tribal reimbursements. At this time, three of the seven tribal governments receive liquor tax dollars, Blackfeet, Fort Belknap, and Fort Peck. These tribal governments adhere to the Montana liquor tax laws. The state of Montana collects the tribes' portion of the liquor taxes and quarterly distributes those collections based on a formula (per capita liquor consumption times tribal membership times the Montana tax rate). After reducing the excise tax revenue by the tribal distribution, the revenue is distributed to the enterprise fund and then to the general fund. The license tax is distributed to the enterprise fund and then to the general fund and then to the general fund and then to the general fund and Human Services.

### Revenue Projection:

Data Source(s): SABHRS, Department of Revenue

Contacts: Department of Revenue

# Revenue Estimate Profile

# **Liquor Profits**

**Revenue Description:** The Department of Revenue (DOR) is authorized to sell liquor and fortified wine to retail liquor establishments throughout the state. These sales result in profits that are deposited in the general fund. Tax revenues generated from liquor excise and license taxes, as well as wine taxes, are estimated under separate methodologies.

Liquor profits received by the state are primarily generated by a mark-up on the sale of liquor and fortified wine, less costs such as commissions and discounts. House Bill 348 enacted by the 2001 legislature phased-in liquor store commission increases based on sales volume over a three-year period beginning fiscal 2003. A 40.0 percent mark-up is added to the state's base cost for liquor. The state's mark-up percentage on the base cost of fortified wine (more than 16% but no greater than 24% alcohol by volume) is 51%. The mark-up percentage for both liquor and wine is determined by administrative rule (see ARM 42.11.104).

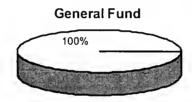

### **Statutory Reference:**

Tax Rate – Authority to markup the price is found in 16-1-404(2) and ARM 42.11.104 Tax Distribution (MCA) – 16-2-108(4) Date Due – NA

Applicable Tax Rate(s): N/A

**Distribution:** Liquor profits are deposited in the general fund annually.

Distribution Chart:

Collection Frequency: Payment for liquor purchases are due within 60 days of the invoice date and revenue is deposited into an enterprise fund.

#### % of Total General Fund Revenue:

FY 2004 – 0.47%	FY 2007 – 0.45%
FY 2005 - 0.43%	FY 2008 - 0.45%
FY 2006 - 0.44%	

#### **Revenue Estimate Methodology:**

#### Data

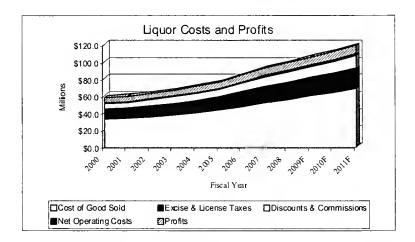

The estimate for the liquor profits is dependent on total liquor sales, the cost of goods sold, and other operational expenditures. Data are obtained from the Department of Revenue (DOR), the state budget system (MBARS), and the state accounting system (SABHRS). DOR provides monthly historical data for the total liquor sales, the number of units of liquor sold, and the average price for each unit of liquor. MBARS provides the present law operational budget for the DOR liquor division. SABHRS data provides a historic breakout of liquor expenses and is used as a comparison to check the adequacy of the estimate.

Revenue Estimate Profile

# **Liquor Profits**

#### Analysis

As seen in the figure below, the profits are a small part of the total liquor sales. Since fiscal 2000, profits have averaged about 9.2 percent of total tax included liquor sales. In the forecast period, profits are expected to be approximately 8.1 percent of total tax included sales.

The starting point in estimating liquor profits is the gross sales of liquor. The steps in determining the liquor profits are as follows:

- Determine units
- Determine total sales value (units \* price per unit)
- Determine costs of goods sold (units \* cost per unit)
- Calculate discounts and commissions
- Obtain operating budgets
- Calculate taxes

Liquor profits are estimated by reducing total tax included liquor sales (for the methodology of total liquor sales, see the "Liquor Excise and License Tax" revenue section) by all the costs of doing business. For the purpose of estimating liquor profits, the cost of doing business includes the cost of the goods sold (cost of liquor and transportation), the taxes (excise and license), discounts and commissions, and net operating costs (program administration). These costs historically represent 91.1 percent of the cost of a unit of liquor. When costs are subtracted from total sales, the resulting amount is the estimate for liquor profits.

### **Revenue Projection:**

Data Source(s): SABHRS, MBARS, Department of Revenue

Contacts: Department of Revenue

## Revenue Estimate Profile

# **Lottery Profits**

**Revenue Description:** The Montana state lottery was enacted by legislative referendum and became effective January 1, 1987. The first lottery game began in June 1987. A lottery is generally defined as "any procedure in which one or more prizes are distributed among persons who have paid for a chance to win a prize". The games are administered by the Department of Administration. By law, a minimum of 45.0 percent of the money paid for tickets or chances must be paid out as prizes.

Lottery revenue is derived from ticket sales, sales agents license fees, and unclaimed prizes. Sales revenue is initially deposited into an enterprise fund known as the state lottery fund. After paying prizes, ticket costs, commissions, and other operating costs, any profits are transferred to the general fund.

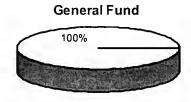

### **Statutory Reference:**

Tax Rate – NA Distribution (MCA) – 23-7-402(3) Date Due – quarterly (23-7-402(3))

**Applicable Tax Rate(s):** There is no actual tax rate involved. However, applicants for sales agent licenses are charged a \$50.00 fee to cover the cost of investigating and processing the applications.

**Distribution:** All gross lottery revenue not used for prizes, commissions, administration, and operating expenses, together with the interest earned (on the gross revenue while the gross revenue is in the enterprise fund), is considered net revenue. This net revenue is transferred to the general fund. Senate Bill 55, passed by the 1999 legislature, requires the Department of Commerce to submit a biennium budget for the state lottery fund for appropriation by the legislature. By determining the amount appropriated, the legislature has better control over the amount transferred to the general fund.

#### Distribution Chart:

**Collection Frequency:** Lottery revenues are collected on an on-going basis. Transfers to the general fund are usually made quarterly.

#### % of Total General Fund Revenue:

FY 2004 - 0.59%	FY 2007 - 0.62%
FY 2005 - 0.41%	FY 2008 - 0.56%
FY 2006 - 0.53%	

#### Revenue Estimate Methodology:

The estimate for lottery profits is derived by estimating the various sources of revenue to the enterprise fund and then estimating the various expenses of the fund. Revenues less expenses are considered net revenue (profits).

#### Data

Data from SABHRS provide a history of the enterprise fund revenues and expenditures. Annual reports received from the Montana Lottery Commission provide additional financial information about the fund. Lottery personnel are contacted for their views on trends in lottery tickets sale and other factors that may influence revenues or expenditures. The state budgeting system is

# Revenue Estimate Profile

# **Lottery Profits**

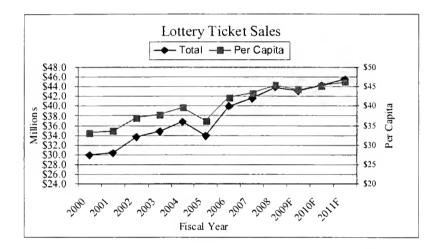

used to obtain estimates of appropriated administrative expenses. Montana population statistics from Global Insight (see "Montana Population" in the Overview section) are used to derive per capita ticket sales.

#### **Analysis**

The estimate for lottery profits is derived by first estimating the four revenue components and then the two expenditure components.

#### Revenue

 Ticket sales – This component comprises the large majority of lottery revenue. To derive this estimate, a per capita ticket sales amount is multiplied by the estimate of Montana's population. Since lottery personal state that FY 2008 was an unusual year, the estimate for per capital ticket sales for FY 2009 is based on FY 2007 per capita sales multiplied by an historic average rate of growth in per capita sales. Estimates for FY 2010 and FY 2011 are based on the previous fiscal year.

- 2. Licenses Applicants who apply for a sales agent license pay a \$50 license fee. To estimate this revenue component, the amount from the last known fiscal year is used for all subsequent years.
- 3. Interest earnings Money in the lottery enterprise fund as well as Montana's share of money held by the Multi-State Lottery Association, earns interest at the short-term interest rate and is deposited to the enterprise fund. To estimate interest earnings, the average daily balance is multiplied by the short-term interest rate. The average daily balance is determined by: a) first, deriving the balance for the last known fiscal year by dividing known interest earnings by the known short-term interest rate; b) second, developing a balance ratio between the balance derived from (a) above and ticket sales from the last known fiscal year; c) multiplying this ratio by the ticket sales estimate (from number 1 above) for each subsequent year to derive the average daily balance. Once the balance has been estimated, it is multiplied by the applicable short-term interest rate (see the "Treasury Cash Account" revenue source for details on the development of this rate).

Revenue Estimate Profile

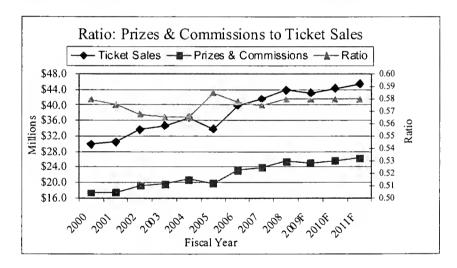

# **Lottery Profits**

4. Other – The small amounts of miscellaneous revenue from the last known fiscal year is used for all subsequent years.

#### Expenditures

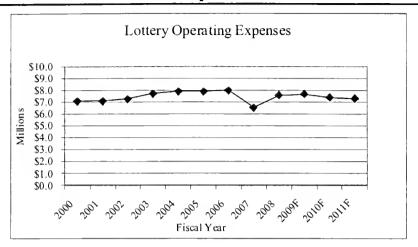

1. Prizes and Commissions – Since the ratio of prizes and commissions to ticket sales is relative constant, this ratio is computed for all years with actual data. The ratio from the last known year is multiplied by the estimated amount of ticket sales (see above) for each subsequent fiscal year to derive the estimate of prizes and commissions.

2. Operations – To estimate the operational costs for the three fiscal years in question, budget submissions by the Lottery Commission, as shown on the state budgeting system, are used.

Revenue Estimate Profile

# **Lottery Profits**

### Adjustments and Distribution

Once total revenue and total expenditures have been estimated, the difference is the expected profit. All profits are deposited to the general fund.

## Revenue Estimate Profile

### **Tobacco Tax**

Revenue Description: The tobacco tax is an excise tax on tobacco products sold in Montana. Cigarettes are not subject to the tobacco tax. The tax is considered a direct tax on retail consumers, but is collected by the wholesaler. Tobacco products shipped from Montana and destined for retail sale and consumption outside the state are not subject to the tax.

Beginning May 1, 2003, the Fifty-eighth Legislature passed SB 407 that doubled the tax on all tobacco products other than cigarettes and moist snuff from 12.5 percent to 25.0 percent of the wholesale price. Furthermore, moist snuff is now taxed individually, increasing the rate from the equivalent of \$0.28 an ounce to \$0.35 an ounce. Beginning January 1, 2005, the electorate approved 1-149 that raised the tax on other tobacco products to 50 percent of the wholesale price and moist snuff to \$0.85 per ounce. Wholesalers are allowed a discount of 2.5 percent, until January 1, 2005 when the discount will be reduced to 1.5 percent, to cover collection and administrative expenses. The wholesaler is entitled to a refund for tobacco products that remain unsold. I-149 adjusted distributions to allow half of the tax revenues to flow into the state general fund and half to flow into a new state special revenue fund for health and Medicaid initiatives.

The state has tobacco revenue sharing agreements with five tribes in Montana. In the agreements with the Blackfeet, Fort Belknap, Fort Peck, Chippewa Cree, and Crow tribes, the state collects the tax imposed by the tribes and distributes the revenue to the tribes on a quarterly basis. Indian consumers of tobacco on other reservations are exempt from paying the tobacco tax.

## Revenue Estimate Profile

### **Tobacco Tax**

## Revenue Estimate Methodology:

#### Data

Data are obtained from the state accounting system (SABHRS), the Department of Revenue (DOR), U.S. Census Bureau, and Global Insight is used to forecast tobacco tax revenues. The tobacco tax is made up of two taxes on the consumption of tobacco products. The tax on snuff (most tobacco) is assessed on the number of ounces sold, and the tax on all other tobacco products (not including cigarettes) is assessed on the wholesale value of the product. The DOR provides information, by distributor and month, on the number of ounces of snuff and the value of the tobacco products sold in each month and the records of tribal distributions. Other data provided by DOR include the amount of discounts and credits given to tobacco distributors. Historic observations of tax collections are available through SABHRS, projections for Montana population greater than or equal to 21 years of age are supplied by the Census Bureau, and Global Insight supplies projections of the consumer price index (CPI).

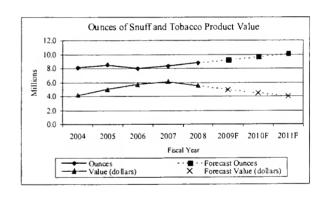

DOR provides monthly data on the sales of snuff, in ounces, and the wholesale value of the sales of other tobacco products purchased in Montana. To prepare the data for analysis, the monthly data is summed across all distributor purchases and over the fiscal years. For the estimate of moist snuff tax, the data is divided by the estimate of the Montana population of ages 21 or greater. The per-capita consumption estimate is then used later to determine the total taxes paid on moist snuff. DOR data includes administrative discounts and credits, provided to the distributors for collecting the tax, which is used later in the process. The actual SABHRS data serves as a comparative check against the collection data provided by the DOR.

#### **Analysis**

For the first full year in fiscal 2004, the tobacco tax assessment distinguished between moist snuff and other tobacco products. In the 58<sup>th</sup> Legislature, the taxation of moist snuff was changed. A new tax rate is now imposed on the ounces of snuff sold instead of on value, as other tobacco products are taxed. Consequently, the method used to estimate tobacco tax collections was changed to reflect the changes in the law. The figure below shows the number of ounces of moist snuff sold to wholesalers since fiscal 2004 and the projected sales of ounces through the forecast period. Additionally, the figure shows the wholesaler sales and projected sales of other tobacco products over the same period.

Analysis shows that sales of moist snuff and other tobacco products are not consistent. The sales of moist snuff in Montana have increased over time while the sales of other tobacco products have declined. Consequently, the estimate for the tobacco taxes is derived by unique growth factors to the proxy of each moist snuff and other tobacco products.

The forecast for the consumption of moist snuff is obtained by holding per-capita consumption of moist snuff constant and allowing the consumption to grow only as the population grows. The number of ounces of snuff sold in Montana is expected to be 9.2 million in fiscal 2009, 9.6 million in fiscal 2010, and 10.1 million in fiscal 2011.

The forecast for the value of other tobacco products sold in Montana is obtained by applying a two year compound rate of growth to the base year beginning in fiscal 2008. The value of the sales of tobacco products is expected to be \$4.9 million in fiscal 2009, \$4.5 million in fiscal 2010, and \$4.0 million in fiscal 2011.

To finish the estimate, the individual tax rates are applied to the consumption/sales forecasts to create a gross tax estimate. This methodology produces gross tax estimates of total tobacco tax collections of \$10.4 million in fiscal 2009, \$10.6 million in fiscal 2010, and \$10.8 million in fiscal 2011.

#### Adjustment and Distribution

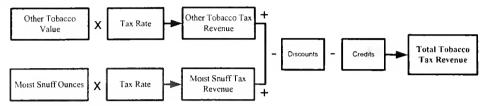

The estimates for gross collections of the tobacco taxes are adjusted for discounts and credits provided to the distributors. Finally, calculations are made for the distribution of the tobacco tax. Tobacco taxes are distributed 50 percent to a state special revenue fund to be used of health and Medicaid initiatives and 50 percent to the general fund. The general fund distribution is then reduced

Revenue Estimate Profile

# **Tobacco Tax**

by tribal reimbursements. At this time, five of the seven tribal governments receive tobacco tax dollars: Blackfeet, Fort Belknap, Fort Peck, Chippewa Cree, and Crow. These tribal governments adhere to Montana tobacco tax laws. The state of Montana collects the tribes' portion of the tax and quarterly distributes the collections based on a formula (per capita tobacco products consumption times tribal membership times the Montana tax rate).

## Revenue Estimate Profile

# **Video Gambling Tax**

Revenue Description: Video gambling income is derived from two sources: license fees and video gambling taxes. There are three types of license fees that generate revenue. Numerous fees are paid by operators for both video gambling machines and for non-video games such as poker. In addition, persons pay an annual fee for the right to assemble, produce, or manufacture video gambling machines or associated equipment. The video gambling tax is paid by licensed video gambling machine operators. License holders are charged a tax of 15.0 percent of the gross income (defined as net of payouts) from each licensed video gambling machine. The Department of Justice (DOJ) issues video gambling licenses and permits and collects the fees and taxes. All video gambling tax revenue is deposited into the general fund.

### **Statutory Reference:**

Tax Rate (MCA) – route operator license (23-5-129), gambling establishment operator license (23-5-177), card table fee (23-5-306(2)), bingo/keno permit (23-5-407), sports tab tax (23-5-502), video tax (23-5-610(1)), machine permit fee (23-5-612(2))

Tax Distribution (MCA) – card table fee (23-5-306(3&4)), bingo and keno tax (23-5-409), sports tab tax (23-5-502), video (23-5-610(6)), machine permit fee (23-5-612(3))

Date Due – card table fees due annually and distributed quarterly to local governments (23-5-306(1&4)), video tax due 15 and 25 days after the end of the quarter (23-5-610(5)(a&b)), machine permit fees due annually prorated on a quarterly basis (23-5-612(2a)), bingo and keno taxes due July 31.

### **Applicable Tax Rate(s):**

#### License Fees

- Video Gambling Machine Permit \$220 annually (prorated basis), \$25 machine transfer processing fee
- Video Gambling Manufacturer License \$1,000 annually. An additional application fee is charged manufacturers to cover
  processing costs of the initial application. The manufacture license may be waived by the DOJ if the manufacture is also a
  licensed distributor or route operator.
- Video Gambling Machine Examination Fee An amount equal to actual DOJ costs of examining the electronic equipment
- Distributor License \$1,000 annually. The distributor license may be waived by the DOJ if the distributor is also a licensed operator or manufacturer. An additional application fee is charged distributors to cover processing costs of the initial application.
- Route Operator License \$1,000 annually. The operator license may be waived by the DOJ if the operator is also a licensed distributor or manufacturer. An additional application fee is charged operators to cover processing costs of the initial application.
- Bingo/Keno Manufacture License \$1,000 annually. An additional application fee is charged manufacturers to cover processing costs of the initial application.
- Gambling Establishment Operator License An amount equal to the actual DOJ costs of determining licensure qualifications
- Antique Slot Machine Seller Permit \$50 annually
- Live Card Game Table \$250 annually for the first table and \$500 for each additional table
- Card Game Dealer License \$75 for the first year, \$25 for each subsequent year
- Pinochle Tournament Permit \$25
- Card Room Contractor License \$150 annually
- Bingo/Keno Permit \$250 annually
- Bingo/Keno Examination Fee An amount equal to actual DOJ costs of examining the electronic equipment
- Sports Tab Game Seller License \$100 annually. An additional application fee is charged to cover processing costs of the initial application.
- Casino Night Permit \$25

#### Gambling Taxes

- Video 15.0% of gross income (defined as net of payouts) per video gambling machine
- Bingo/Keno 1.0% of gross proceeds
- Sport Tabs \$1.00 for each 100 sport tabs sold

## Revenue Estimate Profile

# **Video Gambling Tax**

#### Distribution:

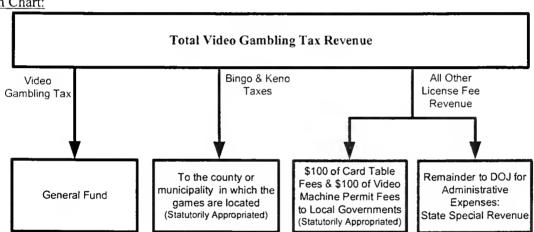

#### License Fees

- 1. \$100 of the live card game table fee and \$100 of the video gambling machine permit fee (prorated basis) are statutorily appropriated for distribution to local governments.
- 2. All other license fee revenue is retained by DOJ to cover administrative costs.

#### Gambling Taxes

- 1. Video All of video gambling tax receipts are deposited into the general fund.
- 2. Bingo/Keno All collections are statutorily appropriated for distribution to the municipality or county in which the game is located.
- 3. Sport Tabs All collections are retained by DOJ for administration purposes.

Distribution Chart:

Collection Frequency: Video tax – quarterly, machine permit fees – quarterly, other fees – annually

#### % of Total General Fund Revenue:

FY 2004 - 3.69% FY 2007 - 3.30% FY 2005 - 3.49% FY 2008 - 3.22% FY 2006 - 3.35%

## Revenue Estimate Methodology:

Video gambling revenue is comprised of many components. Because these components have separate distributions, the estimating methodology incorporates separate estimates for the components based on the type of revenue, either tax revenue or permit revenue.

#### Data

Monthly reports are no longer provided from the Department of Justice. Limited applicable data is available from the department's web site. Historic and current revenue collections are obtained from SABHRS. The Department of Justice provides quarterly statewide net income and average daily income by machine type (poker, keno, and multi-game). Montana population statistics are used to derive per capita video gambling machine gross income.

#### Analysis

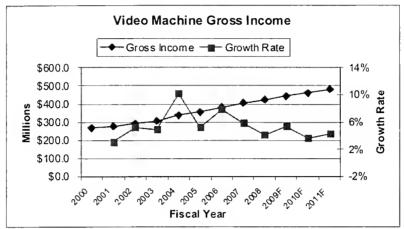

The revenue estimate is determined in a three-step process:

1. Revenue from the tax on video gambling machine gross income (defined as net of payouts) is the largest component of this revenue source and all revenue from this tax is distributed to the general fund. To determine total gross income, gross income

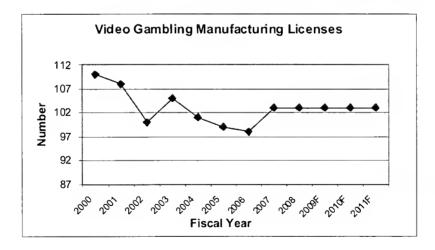

Revenue Estimate Profile

# **Video Gambling Tax**

for poker, keno, and multiple-game machines are calculated from revenue collections. The amount from the most recently completed fiscal year and the estimates for each succeeding fiscal year are multiplied by a growth factor based on Montana personal income. The growth factor represents the rate of increase of per capita gross revenue between fiscal 1995 and fiscal 2008. Once total gross income is estimated, the revenue estimate for this component is determined by multiplying total gross income by the tax rate. The total gross income and growth rates are shown in the chart below.

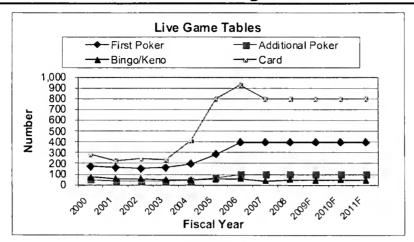

- 2. Permit and license fees are the second component to this revenue source, the revenue from which is deposited to the state special revenue fund and distributed to the Department of Justice to pay administrative costs and to local governments. There are three separate estimates for permit and license fees:
  - a. Video gambling manufacturing license The number of licenses from the last known fiscal year (2007) is multiplied by the \$1,000 license fee and the product used as the estimate for all subsequent fiscal years.

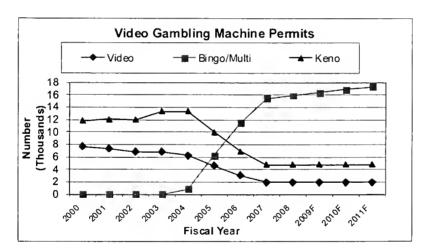

b. Live game permit/license fees – The estimated numbers of "first" poker tables, "additional" poker tables, bingo/keno, and card game tables are those from the last known fiscal year (2007). The numbers are multiplied by the applicable fees of \$250, \$500, \$250, and \$75 respectively, and the product used for all subsequent fiscal years for each type.

Revenue Estimate Profile

# **Video Gambling Tax**

c. Video gambling machine permit fees – The numbers of video, bingo/multi game, and keno machine permits for the last known fiscal year (2007) are summed. The sum is multiplied by the ratio of the amount of revenue deposited to DOJ gambling license account to the total amount of permit fee revenue for the last known fiscal year (this ratio is less than 1 and so reduces the total machine permit fees). This is done to adjust for discrepancies in the last known fiscal year between actual collections and totals derived by multiplying number of permits by the applicable permit/license fee. Once the total adjusted number of permits has been estimated, it is multiplied by the \$220 fee.

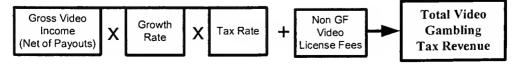

3. Bingo and keno taxes – The total amount of revenue received in the last known fiscal year is carried forward for all subsequent fiscal years.

#### Adjustments and Distribution

Since the general fund and the state special revenue component are estimated under separate methodologies, the distribution of the revenue has already been done.

# Revenue Estimate Profile

### Wine Tax

**Revenue Description:** A wine tax is levied on table wines imported into Montana by wine distributors or by the Department of Revenue (DOR), who is authorized to sell wines to retail liquor establishments throughout the state. A tax is also imposed on hard cider imported by a table wine distributor or DOR. A portion of wine tax revenue is returned to Indian tribes per an agreement between DOR and the tribes.

#### **Statutory Reference:**

Tax Rate (MCA) -16-1-411(1), 16-2-301(2)

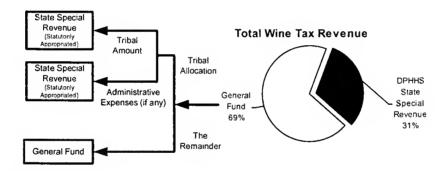

Tax Distribution (MCA) -16-1-411(3), 16-2-301(2)

Date Due – 15<sup>th</sup> day of the month following the sale from the distributor's warehouse (16-1-411(2))

**Applicable Tax Rate(s):** A tax of \$0.27 is imposed per liter of wine and a tax of \$0.037 per liter is imposed on hard cider. An additional tax of \$0.01 per liter is imposed on table wine sold by a table wine distributor to an agent.

**Distribution:** The \$0.01 per liter tax is deposited into the general fund. After expenses and tribal allocations, other wine tax revenue is distributed 69.0% to the general fund and 31.0% to the DPHHS alcohol account. The general fund distribution is reduced by the amount of the tribal agreements.

#### Distribution Chart:

Collection Frequency: Monthly

#### % of Total General Fund Revenue:

FY 2004 – 0.10% FY 2007 – 0.10% FY 2005 – 0.10% FY 2008 – 0.09%

FY 2006 - 0.10%

### **Revenue Estimate Methodology:**

#### Data

The state accounting system (SABHRS) and the Department of Revenue (DOR) provide data for the wine tax estimates. The SABHRS data includes total fiscal year tax collection data. The DOR data provides the information related to historic tribal distributions.

Wine tax collections are made up of the collections of two taxes, the wine tax and the hard cider tax. Although each tax is individually established in statute, no distinction between the taxes is made when preparing the estimates. In the past several years, the cider tax has contributed no more than 0.09 percent of the total wine tax collections. In the future, if cider tax collections become more significant the wine tax methodology will be adapted to forecast hard cider tax.

## Revenue Estimate Profile

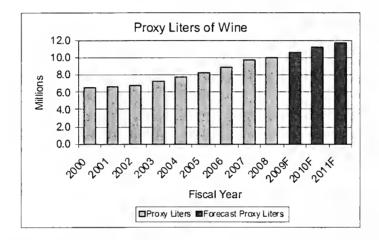

## **Wine Tax**

Only one data transformation is required to forecast the future collections of the wine tax. Because wine projections are based on the number of liters of wine consumed in Montana, the data obtained through SABHRS must be used. This task is accomplished by dividing the total tax receipts by the wine tax rate, producing a proxy number of liters of wine.

The total tax receipts include those taxes that will be distributed to tribal governments.

#### **Analysis**

Growth in wine tax collections, measured in liters of wine, has followed a consistent upward trend through time. The trend is apparent in the figure below. Consequently, liters of wine are forecast using a linear regression model.

The model provides a good fit as shown by a R<sup>2</sup> rating of 0.991. This measure means that 99.1 percent of the variability in the change in liters of wine consumed in Montana can be explained by the passage of time, holding all other impacts constant.\*

The model predicts that each year the consumption of wine in Montana will increase by approximately 5.5 percent, holding all other impacts constant. The growth rate developed in the model is then applied to the most recent actual wine consumption data available or base year fiscal 2006. Total wine consumption is expected to be 10.6 million liters in fiscal 2009, 11.2 million liters in fiscal 2010, and 11.7 million liters in fiscal 2011. Finally, the tax rate is applied to the estimate of proxy liters to determine the total expected wine tax collections, which results in estimates of \$2.9 million, \$3.0 million, and \$3.2 million for fiscal years 2009 through 2011, respectively.

#### Adjustment and Distribution

The last step in producing the estimate of the wine tax collections is to calculate the tax distributions. The wine taxes are distributed between two funds. The general fund receives 69 percent and the Department of Health and Human Services alcohol state special revenue account receives 31 percent. The general fund distribution is reduced by tribal reimbursements. At this time, three of the seven tribal governments receive wine tax dollars, Blackfeet, Fort Belknap, and Fort Peck. These tribal governments adhere to Montana wine tax laws. The state of Montana collects the tribes' portion of the tax, and quarterly distributes the collections based on a formula (per capita wine consumption times tribal membership times the Montana tax rate).

\*For additional information concerning the statistics of fit for the model used for this projection, contact the Legislative Fiscal Division.

### Revenue Estimate Profile

## **Property Tax**

Revenue Description: Montana law requires counties to levy a county equalization levy of 55 mills, a state equalization levy of 40 mills, and 6 mills for the university system against all taxable value in each county. A mill levy of 1.5 mills is also applied against all property in the five counties with a vo-tech college. Taxable value is defined as the market value of statutorily defined property times a statutory tax rate. Property valued at market value includes personal property, utility property, railroad and airline property, and mineral net and gross proceeds. The assessed value of residential and commercial real estate is the market value phased in over the reappraisal cycle. Agricultural land and timberland are valued on a productivity basis and their values are also phased in over the reappraisal cycle. The last reappraisal cycle took effect January 1, 2003 and the next reappraisal will take effect January 1, 2009.

Beginning January 1, 2003, residential and commercial property as well as agricultural land and timberland reflect the impact of a new reappraisal on market values. The current reappraisal cycle is 6 years, during which increases in property values will be phased in by 1/6th per year. Property that declines in value will be assessed immediately at its new reappraised value. The impact of the 2003 reappraisal on assessed values increased the market value of the average residence by 20.2 percent. The equivalent increases for commercial property were 18.5 percent and for agricultural land by 15.3 percent.

The 2003 legislature passed a reappraisal mitigation bill - SB 461. Beginning in tax year 2003, reappraisal values were phased in over the next six years. The new tax rates and the new homestead and comstead exemptions are shown in the accompanying table.

Beginning January 1, 2009, a new reappraisal of residential and commercial real estate, agricultural land and timberland will be available. As of this writing, the data on the new reappraisal are not available, although the revenue estimate for property tax includes an estimate of the change in market values for the relevant classes of property. The revenue estimate will be updated when the actual information becomes available.

SB 461 Tax R	ates and Ex	•	tages for Class 4 Res	idential and
		Commercial Pr		
		Class 4	Class 3	Class 4
	Tax	Residential	Multi Family Housing	Commercial
Fiscal Year	Rate	Exemption	Exemption	Exemption
2003 (prior law)	3.46%	31.0%	31.0%	13.0%
2004	3.40%	31.0%	31.0%	13.0%
2005	3.30%	31.4%	31.4%	13.3%
2006	3.22%	32.0%	32.0%	13.8%
2007	3.14%	32.6%	32.6%	14.2%
2008	3.07%	33.2%	33.2%	14.6%
2009	3.01%	34.0%	34.0%	15.0%

The new reappraised values will be phased in over the next six years, FY 2010 through FY 2015. Unless changed by the legislature the tax rates and exemptions will be constant at the levels shown for FY 2009 in the accompanying table.

In addition to the tax on property, this revenue component includes collections from "non-levy" sources that are distributed on the basis of mills levied by taxing jurisdictions. These non-levy sources include the state share of coal gross proceeds taxes, federal forest revenues, and other smaller revenue sources.

This source also includes the state's share of protested taxes paid by centrally assessed companies. Should the state fail in it defense of the taxation of these companies, the protested taxes must be returned to the taxpayer.

Homeowners whose homesteads have increased above certain thresholds and whose income falls below certain levels will face lower tax rates.

### **Revenue Estimate Methodology:**

#### Data

The property tax received by the state is composed of two kinds of revenue. First there is property tax proper, i.e. each property has a taxable value which is multiplied by a mill levy (a tax rate per thousand dollars of taxable value) set by the government, in this case the state. The second kind of revenue is "nonlevy" revenue that is distributed to the mill levy and is included as property tax revenue.

The state imposes five types of mill levies. These are the 33-mill elementary county equalization levy, the 22-mill high school county equalization levy, the 40-mill state equalization levy, the 6-mill university levy, and the 1.5-mill vocational technical college (vo-tech) levy. The first three (most often called the 95 mills for education) are applied to all property in the state and are deposited in the general fund. The 6-mill levy is applied to all property in the state and is deposited in a special account for

### Revenue Estimate Profile

### **Property Tax**

university operations. The 1.5-mill levy is applied to all property in the counties in which the five vo-tech colleges are located, i.e. Butte-Silver Bow, Cascade, Yellowstone, Missoula, and Lewis and Clark.

The data required to produce forecasts of property tax received by the state are historical data on assessed and taxable value by class of property, the amount of property in tax increment financing (TIF) districts, the amount of local abatements conferred by local governments, and future growth rates for these variables. Also required is historical and future data on the nonlevy components of property tax. These are gross proceeds revenue, federal forest revenue, and miscellaneous revenue allocated to the various state mill levies. The latest taxable value data is for tax year 2008 which began January 1, 2008, and the latest data for the nonlevy revenue is fiscal 2008.

The historical data on assessed and taxable value by property tax class, TIF taxable value, and abated taxable value are provided to the LFD and OBPP by the Department of Revenue on an annual basis, usually in October. TIF taxable value is required because state law allows a TIF district to apply the state 95 mills and 1.5 vo-tech mills to the increment in property value that occurred since the TIF was created, but allows the TIF district to keep the revenue associated with these mill levies. The state does not receive its share of the mill levies applied to incremental TIF property. Thus the taxable value of the state must be adjusted downward by the value of TIF property for the 95 mills and the 1.5-mill levy. The 6-mill levy revenue derived from incremental TIF property does flow to the special account for university operations, and thus the tax base for the 6-mill levy is not adjusted for the incremental taxable value in a TIF.

Montana law allows local governments (usually counties) to temporarily reduce the tax rate applied to the assessed value of property. This is called abated property. For instance, in tax year 2006, an electrical generation plant outside Hardin and another in Silver Bow County were granted a 10 year exemption on all personal and real estate property. The abatement applies to all local mills for those jurisdictions in which the properties are located. However, the exemption from property taxes does not apply to state mills. The taxable value data received by the department does not include the exempted property and thus for state property tax revenue purposes this property must be added back to the statewide taxable value.

#### Analysis

The latest year for which taxable value by class is available is the base from which future taxable values are derived. Growth rates are applied to the taxable value in each class of property. The table below shows growth rates for each class of property, for TIF and abated values and the resulting growth rates in net taxable value.

For the most part, growth rates are based on historical growth since fiscal 2001 and on expected changes in tax rates in fiscal 2010 and 2011.

The growth rate for class 4 – residential and commercial real estate - is an estimate of the amount of new property expected to be added but does not contain an estimate of the effects of the new reappraisal for fiscal years 2010 and 2011. The amount of new class 4 property is assumed to be 3.5 percent, the average since 2000. The increase in the market value of class 4 property as a result of reappraisal is not yet known although the Department of Revenue has provided very preliminary estimates. In approving the forecast for property tax, the Transportation Revenue Committee on November 18th declined to recognize the preliminary estimated impacts of reappraisal on agricultural land, timberland, and residential and commercial real property.

Almost all classes of property will experience constant tax rates through 2011. An exception is railroad and airline property. Under the federal 4R act, the tax rate on railroads and airlines is a weighted average of the tax rates of all commercial and industrial property in the state. This includes business equipment, centrally assessed property and commercial real estate.

The growth in net proceeds and gross proceeds taxable value is based on the projected growth in the mineral values. Net proceeds growth is based on the growth in taxable value of metals as derived from the metal mines tax base. Gross proceeds growth is based on growth rate for miscellaneous metals tax base.

There are two new classes of property that have been added to the property tax base beginning in FY 2009. These are class 15, property associated with carbon sequestration, and class 16, property associated with the Montana-Alberta Transmission line. Neither of these properties is expected to be complete before the end of FY 2011.

The following table shows the projected property tax revenue from the property tax base and nonlevy revenue.

C	d an	112000	r			
General Fund Property Tax Revenue		Y 2 009	_:	Y 2010	·	Y 2011
95 mill Revenue	\$	200.45	S	209.65	\$	216.23

Protested Taxes - 95 mills and 1.5 mills	_	(3.08)	_	(3.08)	_	(3.08
Net Property Taxes in General Fund	\$	211.49	\$	222.98	\$	228.93
Percent Growth		6.6%		5.4%		2.7%
6 mills Property Tax Revenue (University Account)	\$	12.81	\$	13.39	\$	13.81
Nonlevy Revenue associated with 6 mills		0.84		1.21		1.19
Protested Taxes - 6 mills		(0.19)		(0.19)		(0.19
Net Property Taxes in University Account	\$	13.46	\$	14,41	\$	14.80

Once net taxable values are determined, the mill levies are applied. To this is added forecasts of nonlevy revenue. Nonlevy revenues come from coal gross proceeds, federal forest receipts and miscellaneous revenue (interest on investments, penalty and interest on delinquent taxes, etc). The tax on the gross proceeds for coal is 5 percent of gross value and is estimated in conjunction with the coal severance tax. Of this total, 41.3 percent is distributed to the elementary and high school county equalization levies.

Revenue Estimate Profile

### **Property Tax**

Federal forest receipts are receipts from the federal government in lieu of revenues from the sale of forest products on federal land. By state law, two-thirds of this revenue is distributed to the county road fund in the counties with federal forestland and the remaining one-third is distributed to the county equalization mills and the county retirement and transportation mills. The share distributed to the 55 mills is the proportion that 55 mills is to all countywide mills in the prior year. This is assumed constant over the forecast period. The proportion that the 55 mills is to all countywide mills is multiplied times 1/3 of the federal forest receipts. The previous formula for distributing federal forest payments to counties sunset in FY 2008. In the Emergency Economic Stabilization Act of 2008 (l.e. the Bailout Bill), a new formula for the distribution of forest receipts was enacted. The new formula for FY 2009 through 2012 considers acres of Federal land within an eligible county, the average 3 highest 25-percent payments made to each eligible State for each eligible county, and an income adjustment based on the per capita personal income for each county. As before, not more than 20 percent but at least 15 percent must be used by county governments for projects on federal lands. The amount of federal forest receipts in total is expected to be around 2.5 times greater than the amount available previously. Thus the amount distributed to the 55 mills will also increase substantially.

Miscellaneous receipts distributed to the 95 mills are such things as investment earnings, tax title sales, and penalties and interest on delinquent taxes. In fiscal 2007, the latest year for which data are available, miscellaneous nonlevy revenue was \$1.5 million, which is expected to remain constant in the future.

Once property tax revenue adjusted for nonlevy revenue is determined, one more adjustment is made. This adjustment is for centrally assessed protested taxes. In fiscal 2008, companies such as Northwestern Energy, Puget Sound and Energy, PacificCorp, Verizon, Qwest, and Omimex protested a portion of their property taxes. Under state law, half of the protested taxes from these companies is deposited in a special account and half in the general fund. It is expected that \$3.1 million will be deposited in the special account each of the next three years on behalf of the 95 mills and an additional \$190,000 on behalf of the six mills.

Property tax revenue in the general fund is expected to increase at a rate greater than in the recent past mainly due to reappraisal. The legislature may accept this revenue by doing nothing, or may reduce this revenue by applying mitigation strategies yet to be determined.

Revenue Estimate Profile

### **Property Tax: 55 Mill**

#### **Statutory Reference:**

Tax Rate (MCA) - 20-9-331(1), 20-9-333(1)

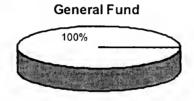

Tax Distribution (MCA) -20-9-331(1), 20-9-333(1)

Date Due – one-half of taxes due November 30<sup>th</sup> and one-half due May 31<sup>st</sup> (15-16-102(1)), county treasurers must remit to the Department of Revenue within the first 20 days of each month money received in the previous month (15-1-504(1))

**Applicable Tax Rate(s):** Each property class has its own tax rate, which is applied to the assessed value to produce a taxable value. For every \$1,000 in taxable value, 55 mills generate \$55 in state property taxes.

**Distribution:** All property tax receipts are deposited into the general fund, except revenue associated with the 6-mill university levy.

**Distribution Chart:** 

Collection Frequency: Monthly with significant state deposits in December and June.

### % of Total General Fund Revenue:

FY 2004 – 7.54 % FY 2007 – 6.37%

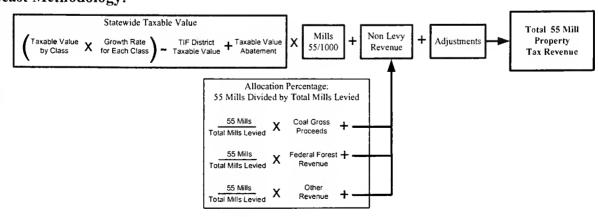

FY 2005 – 6.69%

FY 2008 - 6.83%

FY 2006 - 6.29%

Revenue Estimate Profile

**Property Tax: 55 Mill** 

#### **Revenue Projection:**

**Data Source(s):** Department of Revenue (DOR), Office of Public Instruction (OPI), County Assessor Offices, Montana Association of Counties (MACO)

Contacts: Department of Revenue

Revenue Estimate Profile

**Property Tax: 55 Mill** 

Non Levy Revenue includes federal forest receipts, coal gross proceeds revenue, and other revenue which is distributed to statewide and local mills in each county. Before July 1, 2001, vehicle fees in lieu of taxes, financial institution taxes, and reimbursements from the state were non levy revenue. Before January 1, 2003, oil and natural gas receipts were treated as non-levy revenue. The mills to which non levy revenue is distributed are unique for each county and each non levy revenue source. The state's portion of non-levy revenue is remitted to the state as a portion of the appropriate property tax. For instance, statewide 40 mill revenue includes a property tax portion and a non levy portion.

A description for each individual source follows below.

### Federal Forest Receipts

**Revenue Description:** The federal government authorizes logging operations on forest lands located within the borders of Montana. Through federal fiscal year 2000, the sale of timber generated revenue that the federal government shared with the state in the following year. The state received 25 percent of the federal forest receipts and sent the money to the county treasurer of the county in which the receipts were generated. Within thirty days, the county treasurer distributes the money to various county and state accounts.

The previous formula for distributing federal forest payments sunset in FY 2008. In the Emergency Economic Stabilization Act of 2008 (I.e. the Bailout Bill), a new formula for the distribution of forest receipts was enacted. The new formula for FY 2009 through 2012 considers acres of Federal land within an eligible county, the average 3 highest 25-percent payments made to each eligible State for each eligible county, and an income adjustment based on the per capita personal income for each county. As before, not more than 20 percent but at least 15 percent must be used by county governments for projects on federal lands. The remainder is distributed as below.

#### Applicable Tax Rate(s): N/A

**Distribution:** The county treasurer apportions federal forest receipts in the following manner. Not more than 20% and not less than 15% is distributed to county government for special projects on federal land. Of the remainder:

- 66 2/3% goes to the general fund of the county
- 33 1/3% goes to the following countywide accounts, based on the mill ratios of each to total mills in the prior year: county equalization accounts (55 mills), county transportation account, county retirement accounts

Collection Frequency: Twice annually (usually October and December).

Data Source(s): U.S. Forest Service survey, SABHRS

Contacts: U.S. Forest Service

#### **Statutory References:**

Tax Rate – NA

Distribution (MCA) -17-3-211, 17-3-212

Date Due - the state treasurer distributes the funds within 30 days after receiving full payment

% of Total General Fund Revenue: Included in total property tax contribution.

Revenue Estimate Profile

**Property Tax: 55 Mill** 

**Revenue Estimate Methodology**: The LFD uses a number of analytical techniques to develop relevant assumptions for this source of revenue. Historical data trends, economic conditions, input from industry experts, company surveys, and etc., are examples of information used to formulate these assumptions. The techniques used to develop these assumptions may vary from biennium to biennium and are highly dependent on availability of information, professional intuition/judgment, and a detailed analysis of the revenue source.

The applicable assumptions used by the LFD to develop a revenue estimate for this source are provided in the "Revenue Estimate Assumptions" section of this document. The following summarizes the LFD process used to develop the revenue estimate.

The previous formula for distributing federal forest payments sunset in FY 2008. In the Emergency Economic Stabilization Act of 2008 (1.e. the Bailout Bill), a new formula for the distribution of forest receipts was enacted. The new formula for FY 2009 through 2012 considers acres of Federal land within an eligible county, the average 3 highest 25-percent payments made to each eligible State for each eligible county, and an income adjustment based on the per capita personal income for each county. As before, not more than 20 percent but at least 15 percent must be used by county governments for projects on federal lands. The remained is distributed as below.

### **Coal Gross Proceeds Tax**

**Revenue Description:** The state imposes a gross proceeds tax of 5.0 percent on the gross value of coal produced by all the coal mines in the state. The gross value of coal is computed as the tonnage of coal produced and sold times the contract sales price. This is the same gross value as used in the calculation of the state coal severance tax.

The tax is applied to one year's worth of production and the producer is billed in the following year. The producer pays the tax to the county treasurer in which the mine is located in two equal installments. One is in November of the notice year and the other is in May of the following year. Once received by the county treasurer, the tax revenue is distributed one month after receipt.

**Applicable Tax Rate(s):** The amount of tax due is 5.0 percent of the value of production as measured by the contract sales price for production in the preceding calendar year.

**Distribution:** The county treasurer distributes the coal gross proceeds tax based on the relative proportions of mill levies for the state, counties, and school districts as these existed in tax year 1989. At that time the county equalization mill levy was 45 mills. However, coal gross proceeds from new mines (starting business after December 31, 1988) are distributed across mill levies in the previous fiscal year.

**Collection Frequency:** The coal gross proceeds tax is collected twice annually in November and May. The state receives the tax revenue in December and June.

Revenue Estimate Profile

**Property Tax: 55 Mill** 

Revenue Estimate Methodology: The LFD uses a number of analytical techniques to develop relevant assumptions for this source of revenue. Historical data trends, economic conditions, input from industry experts, company surveys, and etc., are examples of information used to formulate these assumptions. The techniques used to develop these assumptions may vary from biennium to biennium and are highly dependent on availability of information, professional intuition/judgment, and a detailed analysis of the revenue source. The applicable assumptions used by the LFD to develop a revenue estimate for this source are provided in the "Revenue Estimate Assumptions" section of this document. The following summarizes the LFD process used to develop the revenue estimate.

The major coal companies are surveyed for anticipated production levels and general indications of coal prices. In addition, a review is performed of historical trends and current literature on coal prices. The taxable value is then computed for each company by taking anticipated production, and multiplying that number by the contract sales price. Taxable value is then multiplied by the applicable tax rate to determine tax revenue. The final step involves applying the mill ratio for the state county equalization levy to the average statewide levy for tax year 1989 for the counties in which mines are located.

#### Other Revenue

### **Revenue Description:**

The county equalization account receives other revenue in addition to the types listed elsewhere. These include penalties and interest, back taxes, investment earnings, recreational fees, tax title and property sales, various state grants and fees, district court fines, county rents and lease income, and various revenue from federal sources such as PILT, Taylor Grazing and Bankhead Jones payments.

Applicable Tax Rate(s): N/A

Distribution: Varies

Collection Frequency: Varies

Data Source(s): County Collection Reports

Contacts: Office of Public Instruction

**Statutory References:** Various

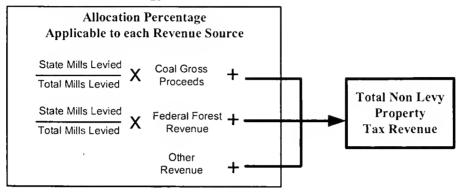

% of Total General Fund Revenue: Included in total property tax contribution.

Revenue Estimate Profile

**Property Tax: 55 Mill** 

**Revenue Estimate Methodology:** Because these sources are fairly stable in total, the last known year of collections is usually used to forecast future collections. Data for the last known year are obtained from data provided to the Office of Public Instruction by the county treasurers.

#### Forecast and Distribution Methodology

Revenue Estimate Profile

**Property Tax: 40 Mill** 

#### **Statutory Reference:**

Tax Rate (MCA) - 20-9-360

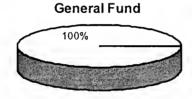

Tax Distribution (MCA) - 20-9-360

Date Due – one-half of taxes due November 30<sup>th</sup> and one-half due May 31<sup>st</sup> (15-16-102(1)), county treasurers must remit to the Department of Revenue within the first 20 days of each month money received in the previous month (15-1-504(1))

**Applicable Tax Rate(s):** Each property class has its own tax rate, which is applied to the assessed value to produce a taxable value. For every \$1,000 in taxable value, 40 mills generate \$40 in state property taxes.

**Distribution:** All property tax receipts are deposited into the general fund, except revenue associated with the 6-mill university levy.

Distribution Chart:

Collection Frequency: Monthly with significant state deposits in December and June.

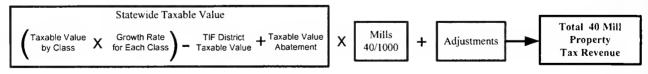

#### % of Total General Fund Revenue:

FY 2004 – 4.66 % FY 2007 – 4.31% FY 2005 – 4.18% FY 2008 – 4.64%

FY 2006 - 4.05%

**Revenue Estimate Methodology:** The methodology used to derive revenue from this source is explained in the methodology section under "Property Tax".

Total Tax = Tax Value \* Mills/1000 + Non-Levy + Adjustments

Revenue Estimate Profile

**Property Tax: 6 Mill** 

### **Revenue Projection:**

**Data Source(s):** Department of Revenue (DOR), Office of Public Instruction (OPI), County Assessor Offices, Montana Association of Counties (MACO)

Contacts: Department of Revenue

Revenue Estimate Profile

**Property Tax: 1.5 Mill** 

Revenue Description: Beginning in fiscal 1997, statute requires the boards of county commissioners in the five counties where colleges of technology reside, to levy 1.5 mills for deposit in the state general fund. This revenue component used to include collections from "non-levy" sources that are distributed on the basis of mills levied by taxing jurisdictions. HB 124, passed during the 2001 legislative session, eliminated distribution of non-levy sources to the 1.5 mill levy.

#### **Statutory Reference:**

Tax Rate (MCA) - 20-25-439(1)

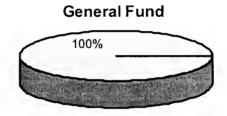

Tax Distribution (MCA) -20-25-439(2)

Date Due – one-half of taxes due November 30<sup>th</sup> and one-half due May 31<sup>st</sup> (15-16-102(1)), county treasurers must remit to the Department of Revenue within the first 20 days of each month money received in the previous month (15-1-504(1))

**Applicable Tax Rate(s):** Each property class has its own tax rate which is applied to assessed value to produce a taxable value. For every \$1,000 in taxable value, 1.5 mills generate \$1.50 in state property taxes.

**Distribution:** All property tax receipts are deposited into the general fund, except revenue associated with the 6-mill university levy.

#### Distribution Chart:

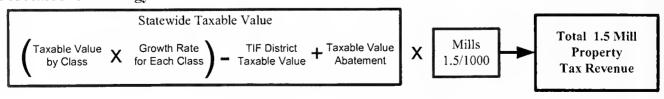

Collection Frequency: Monthly with significant state deposits in December and June.

Revenue Estimate Profile

### **All Other Revenue**

**Revenue Description:** There are a number of other taxes, fees, and fines that historically have generated less than \$2.5 million each in annual general fund revenue. In addition, the statutes governing these miscellaneous taxes, fees, and fines are frequently changed, making meaningful comparison between tax years impractical and accurate estimation of the revenue difficult.

"All Other Revenue" sources are estimated in aggregate except for the following: court automation surcharge (enacted by the 2005 legislature in House Bill 536), investment license transfers, liquor license fee transfers, civil fines, lodging facility use tax, Montana University System debt service deposits, deposits by state agencies for SWCAP/ SFCAP, district court fees, BOI reimbursement of State Street Banking fees, transfers of excess coal tax revenue in the shared account, bentonite tax enacted in SB 276 by the 2005 legislature, excess balances in the captive insurance and the procurement accounts, and transfers of the excess over \$2.0 million from the veterans' cigarette tax account administered by DPHHS. In the past, general fund wildfire costs incurred on federal jurisdiction fires and reimbursed by the federal government had been included in this revenue source, but beginning in fiscal 2003 they are deposited to the federal special revenue fund.

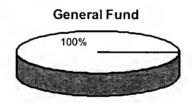

A one-time revenue adjustment of \$4.0 million was added in fiscal 2009 for State Auditor security fines. Montana was part of the investigation of 15 large broker-dealer firms for fraudulent and unsuitable recommendation of auction rate securities. Ten of these firms have agreed to settlements in principal. The State Auditor's Offices expects the fines to be paid by the end of FY 2009.

Statutory Reference: Various

Applicable Tax Rate(s): Various

**Distribution:** "All Other Revenue" is deposited in the general fund.

Distribution Chart:

Collection Frequency: The various revenue sources are generally collected on a monthly basis.

### % of Total General Fund Revenue:

FY 2004 - 2.19% FY 2007 - 1.04% FY 2005 - 2.27% FY 2008 - 1.96% FY 2006 - 1.87%

#### Revenue Estimate Methodology:

There are numerous smaller sources of revenue deposited to the general fund that are treated as a single source termed "All Other". Fifteen of these revenue sources are estimated individually with the remainder estimated as a group.

#### Data

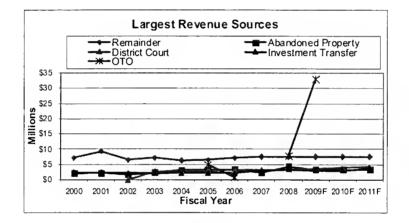

Numerous data sources are consulted for each of the applicable 15 revenue sources that are estimated individually.

Revenue Estimate Profile

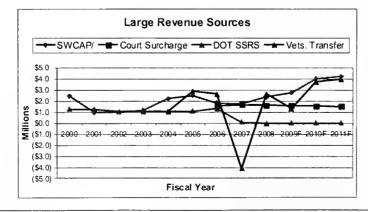

### **All Other Revenue**

#### Analysis

- 1. Largest Revenue Sources (see the figure below)
  - a. The remainder of "All Other" revenue, after the 15 revenue sources have been estimated individually, is estimated by continuing the amount received in FY 2008 for FY 2009-FY 2011.
  - b. Abandoned Property The amount collected in FY 2008 is used for the estimates for FY 2009-FY 2011.
  - c. District Court Fees The previous year's amount is increased by the growth rate between the prior two years.
  - d. Investment License Fee Transfer The transfer amount is the net between non-general fund investment fee revenue collected by the State Auditor and its expenses. These amounts are determined in the "Investment License Fee" revenue source.
  - e. OTO In the September 2007 special session the legislature enacted HB 3 that created a fire suppression state special revenue account and transferred \$40.0 million general fund into it to pay fire suppression costs. HB 3 terminates June 30, 2009. It is estimated that there will be a balance of \$32.915 million in the fund at the end of FY 2009. Section 17-1-504, MCA, requires that all assets, liabilities, and fund balance of an account terminated by the legislature accrues to the general fund. Therefore, \$32.915 million is contained in this revenue source for FY 2009.

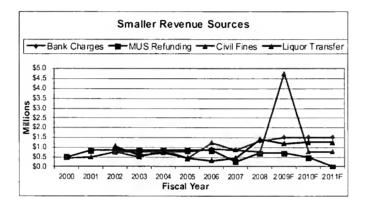

- 2. Large Revenue Sources (see the figure below)
  - Statewide Cost Allocation Plan Amounts budgeted for agencies in HB 2 for the SWCAP are used for the amounts from this source.
  - b. Court Surcharge The previous year's amount is increased by the growth rate between the prior two years.
  - c. Veteran's Cigarette Account Transfer Money in the account at the end of a fiscal year in excess of \$2.0 million is transferred to the general fund. To estimate the excess amounts, distributions of cigarette tax revenue to the account (as determined in the "Cigarette Tax" revenue source) is reduced by budgeted present law amounts from the account for each fiscal year obtained from MBARS. Included are expenditure estimates from long range building appropriations. The \$2.0 million limit is then subtracted from the net revenue.

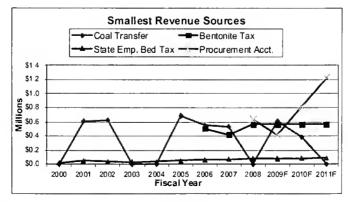

### Revenue Estimate Profile

### **All Other Revenue**

- 3. Smaller Revenue Sources (see the figure below)
  - a. Banking Charges The rate the Board of Investments charges funds for its services is determined by a contract with a financial institution. Board personnel state that the current contract is \$1,500,000, but may be more if additional accounts are established. The current contract amount was used.
  - b. Montana University System Refunding Payments are determined by a loan repayment schedule calculated by the Department of Administration. The loan will be paid off by FY 2011.
  - c. Civil Fines The amount collected in FY 2008 is carried forward for FY 2009-FY2011. The FY 2009 amount is increased by \$4.0 million of security settlement revenue anticipated by the State Auditor's Office.
  - d. Liquor License Fee Transfer Money collected from liquor license fees, net of operating costs of the Department of Revenue and Department of Justice, is transferred to the general fund. License fee revenue and operating costs (obtained from MBARS budgets) are estimated and shown in the "Liquor Profits" revenue source.

- 4. Smallest Revenue Sources (see the figure below)
  - a. Coal Shared Account, Captive Insurance Account, and Procurement Account Transfers Any excess fund balance in the accounts are transferred to the general fund. To estimate the excess amounts, distributions of coal severance tax revenue to the account (as determined in the "Coal Severance Tax" revenue source) and revenues estimated by the Governor's budget office are reduced by budgeted present law amounts for each fiscal year from the account obtained from MBARS.
  - b. Bentonite Tax The amount collected in FY 2008 is carried forward for FY 2009-FY2011.
  - c. State Employees Lodging Facility Use Tax Revenue from this tax paid by state employees is returned to the funds from which they were paid, including the general fund. The general fund estimate is calculated by multiplying the estimate for non-general fund (estimated in the "Lodging Taxes" revenue source) by the ratio of the previous lodging facility use tax general fund portion to the total non-general fund portion.

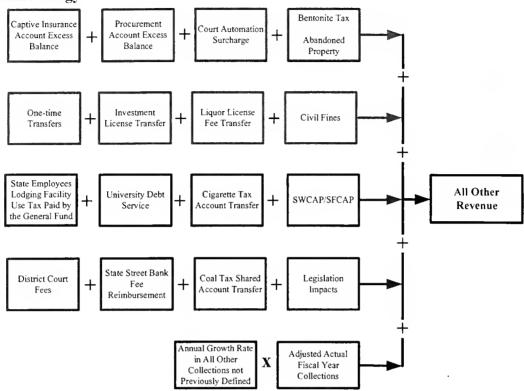

#### Adjustments and Distribution

Once total revenue for each fiscal year is determined 100 percent of the revenue is distributed to the general fund.

Revenue Estimate Profile

### **Highway Patrol Fines**

**Revenue Description:** The Montana Highway Patrol issues citations for speeding, driving under the influence of alcohol or drugs, and other misdemeanors. The fines and forfeitures associated with these citations are collected by various state and local courts.

#### **Statutory Reference:**

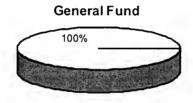

Tax Rate (MCA) – general fines (61-3-601, 61-5-307, 61-7-118, 61-8-711, 61-9-511), multiple others Tax Distribution (MCA) – 3-10-601 (fines collected in justice court are included in "All Other General Fund"), 61-10-148 (violations of vehicle size, weight & load), 61-12-701 (fines by Highway Patrol)

Date Due - upon conviction

Applicable Tax Rate(s): Fines for citations are variable.

**Distribution:** All of Highway Patrol fines and forfeitures on all offenses that result from citations issued by the Highway Patrol, except those paid to a justices' court, and received by the state are deposited in the general fund.

#### Distribution Chart:

Collection Frequency: Monthly

#### % of Total General Fund Revenue:

FY 2004 – 0.30% FY 2007 – 0.23% FY 2005 – 0.28% FY 2008 – 0.21%

FY 2006 - 0.25%

### Revenue Estimate Methodology:

The estimate for the highway patrol fine revenue is derived by estimating a growth rate for each of the fiscal years for the 3-year period in question.

#### <u>Data</u>

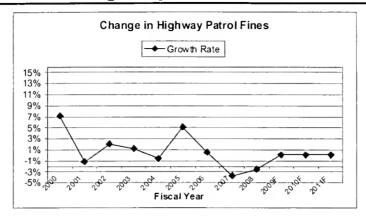

Data from the statewide accounting system (SABHRS) provide a history of highway patrol fine revenue.

#### Analysis

The estimate for highway patrol fines is derived by multiplying the revenue amount from the last known fiscal year and all subsequent years by a growth factor. The growth factor is the average annual growth between FY 2000 and FY 2008. Legislation impacts, if any, are added.

Revenue Estimate Profile

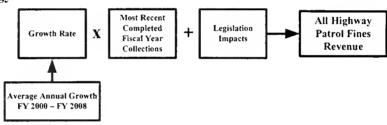

### **Highway Patrol Fines**

### Adjustments and Distribution

Once total tax revenue for each fiscal year is determined, the applicable distribution percentage, 100 percent to the general fund, is applied.

Revenue Estimate Profile

### **Nursing Facilities Fee**

**Revenue Description:** This source consists of two similar utilization fees on nursing homes: 1) nursing facility utilization fee; and 2) intermediate care facility utilization fee.

With the enactment of House Bill 749 by the 2005 legislature, qualified nursing facilities are required to pay a <u>nursing facility utilization fee</u> of \$8.30 for each bed day in the facility. Nursing facilities are health care facilities licensed by the Department of Public Health and Human Services and include those operated for profit or non-profit, freestanding or part of another health facility, and publicly or privately owned. Specifically included by statute is the Montana Mental Health Nursing Care Center. According to federal definitions, nursing facilities do not include adult foster homes, retirement homes, and other alternative living arrangements. Bed days are defined as a 24-hour period in which a resident of a nursing facility is present in the facility or in which a bed is held for a resident while on temporary leave.

An <u>intermediate care facility utilization fee</u> is imposed on resident bed days of intermediate care facilities for the mentally retarded. The only qualifying facility is the Montana Developmental Center. With the enactment of Senate Bill 82 by the 2005 legislature, the fee is six percent of a facility's quarterly revenue divided by the quarterly bed days.

#### **Statutory Reference:**

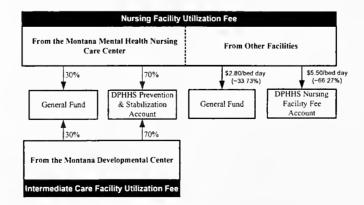

Tax Rate (MCA) – Nursing facility utilization fee (15-60-102), intermediate care facility utilization fee (15-67-102(2)) Tax Distribution (MCA) – Nursing facility utilization fee (15-60-102 & 15-60-210), intermediate care facility utilization fee (15-67-102(3))

Date Due – Nursing facility utilization fee due the last day of the month following the close of the calendar quarter (15-60-201), intermediate care facility utilization fee due the month following the close of the calendar quarter (15-67-201(1))

**Applicable Tax Rate(s):** 1) <u>Nursing facility utilization fee</u> – \$8.30 per bed day; 2) <u>Intermediate care facility utilization fee</u> - 6 percent of a facility's quarterly revenue divided by the quarterly bed days

**Distribution:** Nursing facility utilization fee: 1) for fees paid by the Montana Mental Health Nursing Care Center – 30 percent to the general fund and 70 percent to the prevention and stabilization account (for use by the Department of Public Health and Human Services to provide health and human services); 2) for all other facilities - \$2.80/bed day to the general fund, and \$5.50/bed day to the nursing facility fee account (for use by the Department of Public Health and Human Services to increase the average price paid for Medicaid nursing home services). Intermediate care facility utilization fee: for fees paid by the Montana Developmental Center - 30 percent to the general fund and 70 percent to the prevention and stabilization account.

#### Distribution Chart:

### Revenue Estimate Profile

FY 2005 - 0.39%

FY 2008 - 0.29%

FY 2006 - 0.33%

### Revenue Estimate Methodology:

### Data

To create the nursing facility fees projection, data are obtained from the Department of Revenue (DOR), the Department of Public Health and Human Services (DPHHS), and the state accounting system (SABHRS). DOR provides the number of taxable bed days occupied by clientele of private and state run nursing homes. DPHHS provides counts on the bed days at the Montana Developmental Center (MDC) and total revenues collected, which are used in the calculation of the intermediate care facility fee. SABHRS data provides aggregate historic collections of the nursing facility fees. No adjustments to the raw data are required in the data step for the nursing facility fee analysis.

### Analysis

Nursing facility fees consist of two distinct fees, the nursing facility fee and the intermediate care facility fee. Consequently, two techniques are required to estimate the collection of these fees. The nursing facility fees are estimated using a log model to project future bed days at nursing care facilities. MDC is the only intermediate care facility in Montana and the only facility subject to the intermediate care facility fee. The intermediate facility fee is projected by applying a growth rate to the last year of actual revenue collections at MDC, fiscal 2008.

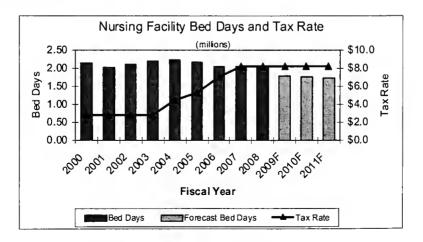

Total nursing fee revenue has increased since fiscal 2003, as a result of fee increases and new fees, but as seen in the figure below the number of taxable bed days at nursing care facilities has declined at the same time. Overall, taxable bed days have been in decline since the fee was imposed in the mid 1990's. Consequently, taxable nursing facility bed days are projected with a log model which smoothes the excessive variability in the data for the purpose of measurement. To obtain the projection for nursing facility fees, the following equation is employed:

### Projected Nursing Facility Fees = TBD<sub>NCF</sub> \* NFFR

### Where:

TBD<sub>NCF</sub> = Taxable Bed Days, Nursing Care Facilities

NFFR = Nursing Facility Fee Rate

The statistics of fit show that a logarithmic curve accurately measures the rate of growth in the number of taxable nursing facility bed days in Montana. The model has an  $R^2$  rating of 0.957. This means that the linear trend explains 95.7 percent of the

### Revenue Estimate Profile

### **Nursing Facilities Fee**

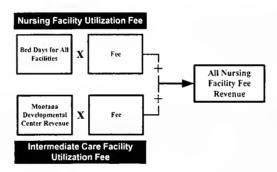

variability of the number of taxable nursing facility bed days in Montana, when all other impacts are held constant.\* The model projects compound growth of approximately -5.1 percent per fiscal year resulting in bed day projections of 1.81 million, 1.77 million, and 1.73 million in fiscal 2009 through fiscal 2011, respectively. By applying the current fee of \$8.30 to the projected taxable bed days, the resulting projections are \$15.0 million, \$14.7 million, and \$14.3 million in fiscal 2009 through fiscal 2011, respectively.

The intermediate care facility fee is assessed against the per-bed day receipts of the facility. Because the intermediate care facility fee is a relatively new fee, there is only a limited amount of data to use in the projection of future fee collections. As a result, the fee is projected by applying the rate of growth in the revenues previous year of actual collection. The rate of revenue growth at MDC between fiscal year 2008 was 1.5 percent. In applying that rate of growth to the fiscal 2008 base, projections equal \$15.1 million in fiscal 2009, \$15.3 million in fiscal 2010, and \$15.5 million in fiscal 2011. Next, the tax is applied to the estimate of total intermediate care facility bed day receipts.

Finally, the fiscal year projections then are summed to provide the total nursing facility fees estimates. The resulting estimates are \$15.9 million in fiscal 2009, \$15.6 million in fiscal 2010, and \$15.3 million in fiscal 2011.

\*For additional information concerning the statistics of fit for the model used for this projection, contact the Legislative Fiscal Division.

Revenue Estimate Profile

### **Nursing Facilities Fee**

### **Revenue Projection:**

Data Source(s): Department of Public Health and Human Services, Nursing Facilities

Contacts: Department of Public Health and Human Services

### Revenue Estimate Profile

### **Public Institution Reimbursements**

Revenue Description: The Department of Public Health and Human Services receives reimbursement for the cost of sheltering and treating residents at the Montana Developmental Center (MDC), the Montana Mental Health Nursing Care Center (MMHNCC), Montana State Hospital (MSH), Montana Chemical Dependency Treatment Center (MCDC), and the Montana Veterans' Home (MVH). There are four sources of reimbursement income: 1) state and federally matched Medicaid monies; 2) insurance proceeds from companies with whom the resident is insured; 3) payments by residents or persons legally responsible for them; and 4) federal Medicare funds. Most of the reimbursements come from federal Medicaid payments.

Three variables determine the level of Medicaid nursing home payments: 1) the number of patient days eligible for Medicaid reimbursement; 2) the reimbursement rate per patient day; and 3) the private resources of Medicaid patients.

### **Statutory Reference:**

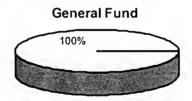

Tax Rate (MCA) – 53-1-402 (requirement to pay) Tax Distribution (MCA) – 53-1-413 Date Due – monthly (53-1-405(3)

### Applicable Tax Rate(s): N/A

**Distribution:** Revenue collected from the above sources is deposited in the general fund with the following exceptions:

- 1. Reimbursements from MDC and MSH are first used to pay debt service on bonds issued to fund construction at these facilities. The remainder is deposited into the general fund.
- 2. Reimbursements received for the Veterans' Home and Montana Chemical Dependency Treatment Center are deposited into a state special revenue account and appropriated to the institutions.

### Distribution Chart:

FY 2004 – 1.31% FY 2007 – 0.58% FY 2005 – 0.82% FY 2008 – 0.78% FY 2006 – 0.75%

### **Revenue Estimate Methodology:**

### Data

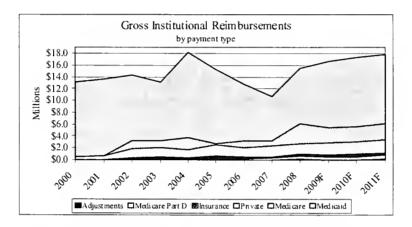

Data are collected from the Department of Public Health and Human Services (DPHHS) and the state accounting system (SABHRS) to develop the estimate for the public institution reimbursements. In addition to residency data, DPHHS provides the data used to develop relationships of payment patterns of individuals and insurance companies to the federal government reimbursements (Medicaid and Medicare). DPHHS also provides estimates on future Federal Medical Assistance Percentage (FMAP) rates. SABHRS provides historical data used to assess the accuracy of the estimates.

### Revenue Estimate Profile

### **Public Institution Reimbursements**

### Analysis

The largest component of Montana's institutional reimbursements is Medicaid, as seen in the figure below. Medicaid and Medicare payments are responsible for most of the variability in reimbursement collections. Consequently, the variability can in large part be attributed to the changes in the FMAP rates for the state. The FMAP rates are set annually based on the state's relative per capita income. States like Montana, with a relatively low per capita income and a higher FMAP rate, receive more federal assistance than states with a higher per capita income. If the state per capita income rises in relation to other states, the FMAP rate and federal reimbursements will decline. In the 2011 biennium, the FMAP is expected to decline from approximately 68.6 percent in fiscal 2008 to 67.1 percent in fiscal 2011. Most of the Medicare payments result from billings at Montana State Hospital (MSH), while most Medicaid payments are generated through care at the Montana Mental Health Care Center (MMHCC).

Estimates for institutional reimbursements are derived using average daily population (ADP) estimates and reimbursement rates provided by DPHHS for three state hospitals: the Montana Dependency Center (MDC), MMHCC, and MSH. Both the ADP and the facility rates are estimated with expected growth percentages. The ADP is adjusted by Medicare and Medicaid eligibility rates, as determined by DPHHS. The FMAP rate, provided to DPHHS in terms of federal fiscal year, is adjusted for the state fiscal year. The equation for calculating the reimbursements for each facility follows:

 $Reimbursements = (ADP_1*Rate_1) + (ADP_P*Rate_P) + (ADP_{MR}*Elig_{MR}*Rate_{MR}*FMAP) + (ADP_{MD}*Elig_{MD}*Rate_{MD}*FMAP_{MD}) \\ Where:$ 

ADP = Average Daily Population

I = Insurance

P = Private

MR = Medicare

MD = Medicaid

ELIG = Eligibility Rate

FMAP = Federal Medical Percentage

According to DPHHS, bed days are expected to remain relatively constant at MDC and MMHNCC. Bed days at MSH are expected to decline from the "over capacity" number of bed days charged in fiscal 2008. The state fiscal year FMAP rates are expected to be 68.2 percent, 67.4 percent, and 67.0 percent in fiscal years 2009 through 2011, respectively. Private rates and insurance rates are expected to grow slowly over the biennium at all three facilities. The estimates for total private payments are estimated to be \$2.0 million, \$2.1 million, and \$2.2 million for fiscal years 2009 through 2011, respectively. The estimates for insurance payments are \$379,187; \$386,450; and \$393,819 for fiscal 2009 through fiscal 2011. Medicaid payments are expected to be \$11.2 million, \$11.7 million, and \$11.7 million through the three years of this analysis. Medicare payments are estimated to average \$2.6 million per year over the three-year period. New since FY 2006 are Medicare Part D reimbursements to MMHCC. Medicare Part D is reimbursed at an average rate of \$45.00/eligible bed day, and the reimbursements are estimated to be approximately \$518,000 annually. The final step in creating the reimbursement estimate is to combine the estimates by payment type estimates. When combined, the estimate for gross reimbursements is \$16.6 million in fiscal 2009, \$17.3 million in fiscal 2010, and \$17.6 million in fiscal 2011.

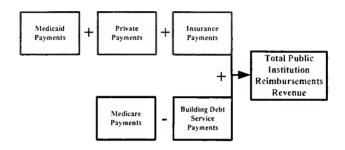

Revenue Estimate Profile

### **Public Institution Reimbursements**

### Adjustment and Distribution

Two adjustments are required to complete the estimates for institutional reimbursements. Gross reimbursements must be reduced by two debt service payments in each fiscal year. The debt service is the result of bonds issued for the purpose of facility upgrades. After subtracting the debt service reimbursement collections are \$13.7 million in fiscal 2009, \$14.4 million in fiscal 2010, and \$14.7 million in fiscal 2011.

Revenue Estimate Profile

### **Tobacco Settlement**

**Revenue Description:** Montana receives revenue as a settling party to a Master Settlement Agreement (MSA) with four original tobacco companies and 56 subsequent companies to end a four-year legal battle with 46 states, Puerto Rico, American Samoa, the U.S. Virgin Islands, the North Mariana Island, Guam and the District of Columbia (52 total settling entities).

Montana is eligible for four types of payments: 1) reimbursement for legal costs (received December 1999); 2) five initial payments (Two were received in fiscal 2000 and one each year was received in fiscal years 2001, 2002, and 2003); 3) on-going, perpetual annual payments; and 4) strategic contribution payments (from fiscal years 2008 through 2017). The MSA places no restrictions on how the settling parties spend the money.

The total amount of tobacco settlement funds available to Montana is affected by a number of adjustments. These may include inflation, sales volume changes, non-participating manufacturers (NPM) adjustment for the loss of market shares, operating income of the original four tobacco companies, number and operating income of subsequent participating manufactures, number of states reaching state specific finality, settlements reached by the four states not party to the agreement (Florida, Texas, Minnesota, and Mississippi), litigation offsets, disputed payments, and federal tobacco legislation offsets among others.

The reduction for the NPM adjustment was first included in the revenue estimates beginning fiscal 2006. Amounts paid by manufacturers who participate in the MSA may decrease if they have lost market shares and it is proven that a significant portion of the loss (to companies not participating in the MSA) is due to the disadvantages caused by the MSA. An economics firm must determine if this is the case. The adjustment does not apply if a state has enacted "model statutes" and enforced them. Although it has not yet been determined if all these conditions have been met, it is expected that participating manufactures will withhold a portion of their payments in disputed escrow accounts until the matter is resolved, thus reducing payments to the settling entities.

### **Statutory Reference:**

Tax Rate - NA

Tax Distribution (MCA) - Montana Constitution, Article X11, Section 4; 17-6-606; 53-4-1011

Date Due – annual payments from settling entities due April 15<sup>th</sup> (Master Settlement Agreement, Chapter IX(c)), General Tobacco annual payments through calendar 2016 due August 30<sup>th</sup> (General Tobacco Adherence Agreement)

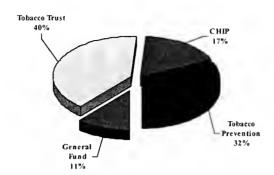

### Applicable Tax Rate(s): NA

**Distribution:** Due to passage of Constitutional Amendment 35 by the electorate in November 2000, the legislature is required to dedicate no less than 40 percent of tobacco settlement money to a permanent trust fund. Since the legislature has not yet determined the exact percentage to be deposited to the trust fund, the revenue estimate assumes 40 percent. For fiscal 2003, the remaining 60 percent of the money was deposited to the general fund. Due to passage of Initiative 146 by the electorate in November 2002, beginning fiscal 2004, 32 percent of the tobacco settlement money funds tobacco prevention programs and 17 percent of the funds is used for the Children's Health Insurance Program. In HB 743, the 2007 Legislature added chronic disease programs to the allowable uses of the 32 percent distribution. The remaining 11 percent of the money is deposited to the general fund.

### Revenue Estimate Profile

### **Tobacco Settlement**

### Distribution Chart:

**Collection Frequency:** For fiscal 2003: The last initial payment is expected January 10, 2003 and the annual payment is expected April 15<sup>th</sup> 2003. Beginning fiscal 2004: Annual payments are expected each April 15<sup>th</sup> into perpetuity. General Tobacco, a new subsequent participating manufacturer, is required to make annual payments every August 30<sup>th</sup> through calendar 2016 for obligations incurred from 2000 to 2003.

### % of Total General Fund Revenue:

FY 2004 - 0.21% FY 2007 - 0.16% FY 2005 - 0.19% FY 2008 - 0.19%

FY 2006 - 0.16%

### Revenue Estimate Methodology:

The derivation of the tobacco settlement revenue estimate involves many factors. The Master Settlement Agreement specifies base amounts to be paid by all participating manufacturers, but also allows various adjustments to be made to these payments.

### <u>Data</u>

The Master Settlement Agreement, signed by the settling entities and participating tobacco manufacturers (PM), is the driving document for the procedure to use in determining how much the original participating manufacturers (OPM) to the agreement and the subsequent participating manufacturers (SPM) have to pay to the settling entities. PriceWaterhouseCoopers, the independent auditor to the agreement, gathers all the data and makes all the calculations required by the Master Settlement Agreement for determining what the PM owe. Documents produced by PriceWaterhouseCoopers provide the historic data needed to project future payments. Staff at the Montana Attorney General's office and sometimes the National Association of Attorneys General are also consulted. Since an adjustment for a change in volume of cigarettes shipped is necessary, various knowledgeable sources are consulted as to expected changes in smoking or the sale of cigarettes.

### **Payments**

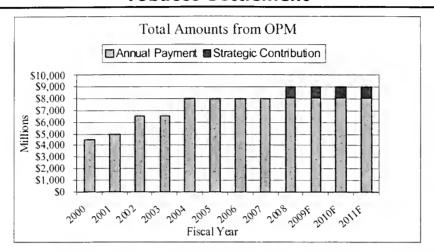

Currently, there are two types of payments from OPM:

- 1. On-going annual payments to be received April 15<sup>th</sup> each year of which Montana receives 0.4247591 percent. These payments are to be made in perpetuity and increased in FY 2008; and
- 2. Strategic contribution payments are to be made from FY 2008 through FY 2017 of which Montana receives 1.0447501 percent.

The table below shows the total of these payments available to all settling entities before any adjustments.

Revenue Estimate Profile

### **Tobacco Settlement**

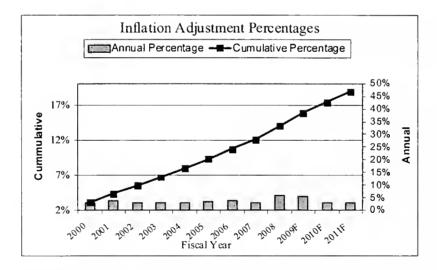

Manufacturers who subsequently participate in the agreement also make payments based on the total annual and strategic contribution payments required by the OPM. The amount of these payments is also subject to various adjustments.

### Adjustments

There are five potential adjustments to the payments.

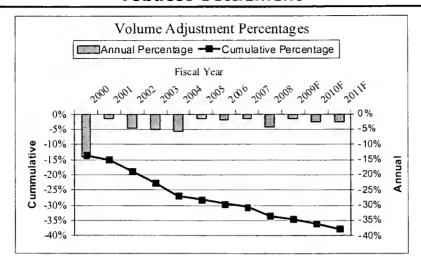

I. Inflation – This adjustment increases the amount owed by PM. The set amounts of the annual and the strategic contribution payments are increased by the greater of 3.0 percent or the amount of the Consumer Price Index for Urban Consumers. The effect is cumulative so that the previous year's inflation percentage is increased by the current year's amount plus the amount of the current year's percentage. The chart shows the annual and cumulative inflation factors.

2. Volume – As the number of cigarettes shipped nationally decreases, payments by PM are reduced. The current number of cigarettes is compared to the 1997 base number of 475.656 billion cigarettes. A proxy for the estimated annual change in the number of cigarettes shipped is determined by developing an estimate for the percentage change in cigarette consumption. For this analysis, the trend (downward) of the number of cigarette shipped from FY 2004 to FY 2008 was applied to the FY 2008 base year and each subsequent year. Like the inflation adjustment, the effect is cumulative so that the previous year's percentage adjustment is increased by the current year's amount plus the amount of the current year's percentage. According to the settlement agreement, the cumulative percentage is then reduced by 2 percent. The chart shows the annual and adjusted cumulative volume factors.

Revenue Estimate Profile

### **Tobacco Settlement**

- 3. Operating income If the aggregate operating income from the OPM sales of cigarettes exceeds the 1996 base amount of \$7,060.840 million, as adjusted for inflation (see above) and by the percentage of states who have finalized acceptance of the agreement (100 percent since calendar 2001), then the dollar amount of the volume reduction is reduced and the amount of OPM payments increases. This adjustment has not been applied since calendar 2000.
- 4. Previous settling states Previous to the Master Settlement Agreement, four states had settled lawsuits with certain cigarette manufacturers. The agreement recognized this by allowing reductions to the OPM annual payments (as adjusted for inflation and volume) of 12.45 percent through the FY 2007 payment, 12.24 percent through the FY 2017 payment, and 11.07 percent thereafter.
- 5. Non-participating manufacturers (NPM) If tobacco manufacturers who participate in the Master Settlement Agreement lose market share to those manufacturers who do not, their payments <u>may</u> be reduced. It must be shown that there was a loss of market share to NPM and that the disadvantages caused by the agreement were a significant factor contributing to the loss. However, the NPM adjustment does not apply to a state that had a "qualifying statute" in effect for the full year in question and had diligently enforced it. The "qualifying statute" requires a manufacturer who is not a PM to pay into a state-specific escrow account \$0.0167539 per cigarette sold in that state in CY 2006 and \$0.0188482 thereafter. Money in the account may be used to pay a judgment or settlement against the manufacturer. The Montana legislature enacted SB 359 (1999 session) and HB 663 (2003 session) in response to the agreement (see Title 15, Chapter 11, Parts 4 and 5). Although the agreement's independent auditor calculates the NPM adjustment, it has never applied it to required payments.

The NPM adjustment is three times the market share loss of PM. Market share loss is determined by subtracting the current year market share of PM from the 1997 base market share of 99.5835 percent less 2.0 percentage points or 97.5835 percent. This percentage difference is multiplied by the annual payment amount adjusted for inflation, volume, and previous settling states. If the computed market share loss exceeds 16-2/3 percent, the formula changes to reduce the percentage adjustment. For this to occur, the change in market share for all PM would have to fall to 80 percent. It is unlikely that this will occur. Based on this formula, the NPM adjustment could reduce Montana's payments by a maximum of \$3.7 million in FY 2009, \$3.8 million in FY 2010 and \$3.9 million in FY 2011, if all the conditions were met. The estimates include a portion of these reductions; not because all the conditions have been met, but because the PM may dispute a portion of a payment. Many PM feel the adjustment should be applied and have subsequently deposited disputed amounts into special escrow accounts until the issue is resolved. However, not all companies dispute the full amount, so the revenue estimate reduces the maximum amount that could be disputed by the same percentage that occurred in the previous year. The end result for the settling entities is that some portion of the money is unavailable even though the adjustment was not applied to the payments. This occurred in the FY 2006 payment when \$3.5 million was withheld from Montana's payment. In FY 2007, \$3.0 million was withheld and \$2.3 million was withheld in FY 2008. It is anticipated that PM will continue to dispute a portion of future payments.

### Revenue Estimate Profile

### **Tobacco Settlement**

### **Analysis**

Once adjustments amounts have been calculated, the applicable adjustments to the OPM and SMP payments can be applied and other revenue components calculated.

OPM Annual Payment - The estimate for tobacco settlement revenue from OPM is derived by first multiplying the payment amount by 1 plus the cumulative percentages for the inflation and volume adjustments and the previous settled states' percentage then adding the dollar amount of the operating income adjustment (zero) and the NPM adjustment. To this total amount, Montana's allocation of 0.4247591 percent is applied.

SPM Annual Payment - The estimate for tobacco settlement revenue from SPM is derived by a five-step process:

- 1. The volume adjustment (a reduction) is calculated by multiplying the annual OPM amount by the cumulative volume percentage.
- 2. A market share adjustment (a reduction to the amount owed) is calculated by: a) subtracting the volume adjustment, derived above, from the OPM amount; b) multiplying the result by a market share proxy to derive the base amount owed; c) the inflation adjustment is applied by multiplying the annual OPM amount by the cumulative inflation percentage; and d) the inflation adjustment is added to the base amount owed.
- 3. The proxy is calculated in the last completed year by dividing the SPM adjusted base payment (adjust for volume) by the total known amount due after adjustments for market share changes. The proxy from the last known fiscal year is used in all subsequent years.
- 4. The NPM maximum adjustment (a possible reduction), as determined above, is calculated. Since not all companies will dispute the entire amount, a percentage is applied to reduce the reduction. For FY 2008, this percentage was 61.6 percent and is used in all subsequent years.
- 5. The total SPM amount is adjusted by the above three adjustments and multiplied by 0.4247591 percent to obtain Montana's share.

OPM Strategic Contribution Payment – From FY 2008 through FY 2017, the OPM owe yearly strategic contribution payments to the settling entities in the amount of \$861,000,000. This amount is increased by the inflation adjustment and decreased by the volume adjustment, both described above. The result is multiplied by Montana's share of 1.0447501 percent.

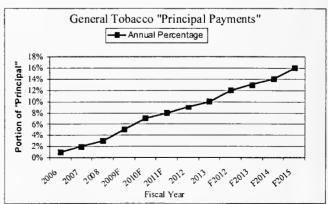

SPM Strategic Contribution Payment – From FY 2008 through FY 2017, the SPM owe yearly strategic contribution payments to the settling entities based on the OPM amount of \$861,000,000. This amount is increased by the inflation adjustment, decreased by the market share adjustment, and decreased by the volume adjustment, all described above. The result is multiplied by Montana's share of 1.0447501 percent.

General Tobacco – The General Tobacco Company joined the Master Settlement Agreement in August 2004 and will make future payments the same as the other SPM. However, the company entered into a separate agreement with the settling entities for making the required payments owed retroactively from the date of its joining to the date the Master Settlement Agreement was signed. These obligations total \$272.3 million. This "principal" amount will be paid yearly over a 12-year period based on a percentage schedule based on the year.

For fiscal years 2008 and 2009, the percentage of the "principal" to be paid is three percent and five percent, respectively. Interest on unpaid balances at five percent is then added to the "principal" payment. Once the total annual payment is calculated, it is multiplied by 0.4247591 percent to obtain Montana's share.

### Adjustments and Distribution

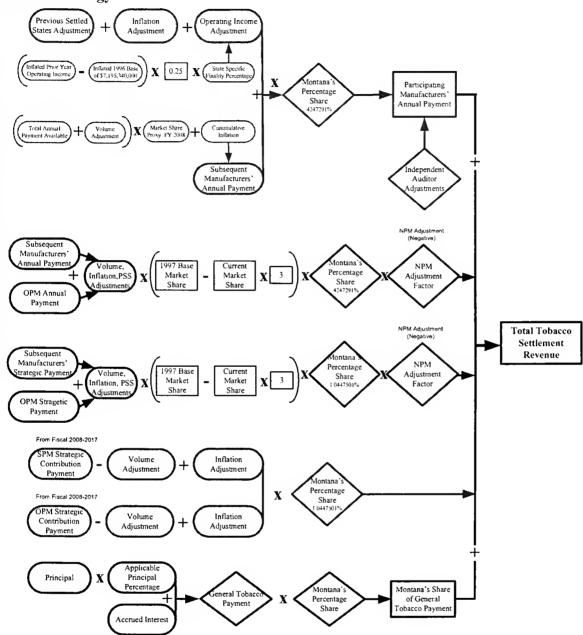

Once total tax revenue for each fiscal year is determined, the applicable distribution percentages are applied.

JOINT RESOLUTION NO. INTRODUCED BY (Primary Sponsor)

BY REQUEST OF THE REVENUE AND TRANSPORTATION INTERIM COMMITTEE

2

ဖ

A JOINT RESOLUTION OF THE SENATE AND THE HOUSE OF REPRESENTATIVES OF THE STATE OF MONTANA ESTABLISHING AN OFFICIAL

ESTIMATE OF THE STATE'S GENERAL FUND REVENUE FOR FISCAL YEAR 2009 AND EACH FISCAL YEAR OF THE 2010-2011 BIENNIUM FOR

THE PURPOSE OF ACHIEVING A BALANCED BUDGET AS REQUIRED BY ARTICLE VIII, SECTION 9, OF THE MONTANA CONSTITUTION; φ

ACCEPTING A PRELIMINARY JUNE 30, 2008, UNRESERVED GENERAL FUND BALANCE THAT WAS ESTABLISHED BASED ON GENERALLY

ACCEPTED ACCOUNTING PRINCIPLES; ESTABLISHING OFFICIAL ESTIMATES OF CERTAIN NONGENERAL FUND REVENUE; AND REQUESTING THAT THE GOVERNOR'S OFFICE OF BUDGET AND PROGRAM PLANNING USE THE REVENUE ESTIMATES CONTAINED IN THIS RESOLUTION

AS OFFICIAL REVENUE ESTIMATES FOR FISCAL YEARS 2009, 2010, AND 2011.

WHEREAS, Article VI, section 9, of the Montana Constitution requires the Governor to submit to the Legislature a budget for the ensuing fiscal

7

period, containing in detail for all operating funds the proposed expenditures and estimated revenue of the state; and 15

WHEREAS, Article VIII, section 9, of the Montana Constitution prohibits the Legislature from appropriating funds in excess of the anticipated 16

17 revenue of the state; and

WHEREAS, section 5-5-227(2), MCA, requires the Revenue and Transportation Interim Committee to estimate the amount of revenue projected

to be available for legislative appropriation and to introduce a resolution setting forth the Committee's current revenue estimate; and 19

WHEREAS, section 5-5-227(3), MCA, expresses the Legislature's intent that its revenue estimates and the underlying assumptions used to derive 20

21 those estimates be used by all agencies in the development of fiscal notes; and

LC0009.01

WHEREAS, section 5-12-302(6), MCA, requires the Legislative Fiscal Analyst to assist the Revenue and Transportation Interim Committee in its

2 revenue estimating duties; and

61st Legislature

- WHEREAS, the Revenue and Transportation Interim Committee obtained the assistance of the Legislative Fiscal Analyst in the development of
- 4 the revenue estimates; and

S

- WHEREAS, the Revenue and Transportation Interim Committee also obtained the assistance of Executive Branch agencies in the development
- 6 of the revenue estimates; and
- WHEREAS, the Revenue and Transportation Interim Committee has adopted revenue estimates and the underlying assumptions used to derive
- those estimates for the general fund and for specific nongeneral fund sources that are significant in the development of the state budget for fiscal year 2009 ω
- 9 and the 2010-2011 biennium; and
- WHEREAS, section 5-5-227(3), MCA, provides that the Revenue and Transportation Interim Committee's estimate, as introduced in the Legislature, 9
- constitutes the Legislature's current revenue estimate until amended or until final adoption of the estimate by both houses; and Ξ
- WHEREAS, the amount of estimated revenue and the general fund balance affects policy decisions of the Executive Branch and the Legislative 12
- 13 Branch; and
- WHEREAS, the revenue estimates and the underlying assumptions contained in this resolution provide the basis for a comprehensive analysis 4
- 15 of the state's revenue condition.

16

- NOW, THEREFORE, BE IT RESOLVED BY THE SENATE AND THE HOUSE OF REPRESENTATIVES OF THE STATE OF MONTANA: 17
- That the state general fund revenue for fiscal years 2009, 2010, and 2011 be estimated to be \$1,915,651,000, \$1,873,585,000, and 9
- 19 \$1,941,532,000, respectively.
- BE IT FURTHER RESOLVED, that the Legislature accept for budget purposes the preliminary unreserved fiscal year 2008 fund balance of 20
- \$432,998,000 for the general fund, prepared according to generally accepted accounting principles. 21

2

9

ω

9

BE IT FURTHER RESOLVED, that the Governor's Office of Budget and Program Planning use the revenue estimates and the underlying assumptions contained in this resolution as the official revenue estimates for fiscal years 2009, 2010, and 2011.

# GENERAL FUND REVENUE

general fund revenue source contained in the "Legislative Budget Analysis, 2011 Biennium, Volume 2 -- Revenue Estimates" (as adopted by the Revenue years 2009, 2010, and 2011 are based on the assumption of a continuation of Montana law as it existed on January 1, 2009. The revenue estimates contained in the following tables are based on the assumptions listed in the tables that follow the general fund estimates and the assumptions for each Except for taxable values attributable to property reappraisal of classes three, four, and ten, the projections for total general fund revenue for fiscal and Transportation Interim Committee) prepared by the Legislative Fiscal Division.
